SCHEME OF INSTRUCTION AND SYLLABUS

B.Tech in Artificial Intelligence and Data Science

Regulation: VR20

w.e.f.2023-24

Department of Artificial Intelligence and Data Science

VELAGAPUDI RAMAKRISHNA SIDDHARTHA ENGINEERING COLLEGE

(An Autonomous, ISO 9001:2015 Certified Institution) (Approved by AICTE, Accredited by NAAC with 'A+' Grade, Affiliated to JNTUK, Kakinada) (Sponsored by Siddhartha Academy of General & Technical Education) Vijayawada, Andhra Pradesh - 520007, INDIA. www.vrsiddhartha.ac.in

Institute Vision

To nurture excellence in various fields of engineering by imparting timeless core values to the learners and to mould the institution into a centre of academic excellence and advanced research.

Institute Mission

To impart high quality technical education in order to mould the learners into globally competitive technocrats who are professionally deft, intellectually adept and socially responsible. The institution strives to make the learners inculcate and imbibe pragmatic perception and proactive nature so as to enable them to acquire a vision for exploration and an insight for advanced enquiry.

Department Vision

The department vision is clearly defined and is in line with the college's vision. The vision of the department is: "To evolve as a centre of academic excellence, advanced research and innovation in the field of Artificial Intelligence and Data Science discipline."

Department Mission

This mission of the Department is concise and supports the College's mission. The mission of Artificial Intelligence and Data Science Department is: "To inculcate students with cognitive skills to perform intelligent data analysis, their application in solving data driven problems, with an inclination towards societal issues, research, professional career and higher studies."

Program Educational Objectives (Undergraduate)

We have program educational objectives for our Computer Science and Engineering program. Program educational objectives are broad statements that describe the career and professional accomplishments that the program is preparing graduates to achieve.

Our program educational objectives are:

I. The graduates of the Program will have knowledge and skills for data analysis, including mathematics, science and basic engineering.

II. The graduates of the Program will have in-depth learning skills to function as members of multi-disciplinary teams and to communicate effectively using modern tools.

III. The graduates of the Program will have extensive knowledge in state-of-the- art frameworks in Artificial Intelligence and be prepared for their careers in the software industry or pursue higher studies and continue to develop their professional knowl-edge.

IV. The graduates of the program will practice the profession with ethics, integrity, leadership and social responsibility

Program Outcomes

On successful completion of the B.Tech (Artificial Intelligence & Data Science) programme the student will be able to:

PO1 - *Engineering knowledge:* Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 - *Problem analysis:* Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 - *Design/development of solutions:* Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4 - *Conduct investigations of complex problems:* Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5 - *Modern tool usage:* Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

PO6 - *The engineer and society:* Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7 - *Environment and sustainability:* Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO8 - *Ethics:* Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO9 - *Individual and team work:* Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10 - *Communication:* Communicate effectively on complex engineering activities with the engineering community and with society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11 - *Project management and finance:* Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12 - *Lifelong learning:* Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Program Specific Outcomes

PSO1: Develop software applications or solutions as per the needs of Industry and society.

PSO2: Adopt new and fast emerging technologies in computer science and engineering.

Semester VII

[L - Lecture, T - Tutorial, P - Practical, C - Credits]

Note: Open Elective III and Open Elective IV are self-learning. Students may opt from any MOOCs platforms. They have to submit the certificate before the last instruction day of VII semester. Course selection for MOOCs is subject to approval by the Head of the Department.

Contact Hours 2							24

Semester VIII

[L - Lecture, T - Tutorial, P - Practical, C - Credits]

 ${\it Note:}~$ The student should undergo internship and simultaneously he she should work

on a project with well-defined objectives. At the end of the semester the student should submit an internship completion certificate and a project report.

If any of our associated company comes forward to offer an emerging course that will be offered as an industry offered course in V, VI or VII semesters under program elective with the approval of BoS. This is incorporated to enhance student skills and employability in cutting edge technologies.

SEMESTER I

20BS1101A MATHEMATICS FOR MACHINE LEARNING

Course Category	Basic Science	Credits	3
Course Type	Theory	L-T-P	3-0-0
Prerequisites	Differentiation, Integration, Curve Tracing	Continuous Evaluation Semester End Evaluation Total Marks	$ \begin{array}{c c} 30 \\ 70 \\ 100 \end{array} $

COURSE OUTCOMES

- 1. Solve linear system of equations and determine eigen values and eigen vectors..
- 2. Solve differential equations of different orders .
- 3. Apply mean values theorems and Lagrange's method of undetermined multipliers where ever necessary .
- 4. Minimize and maximize the linear programming problems .

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

4	3	2			1										4	5.4.1,5.4.2

COURSE CONTENT

UNIT I

Matrices: Rank of a Matrix-Consistency of Linear System of Equations- Linear-Transformations-Vectors, Eigen values and Eigen vectors- Properties of Eigen values-Finding Inverse and Powers of a Matrix by Cayley-Hamilton Theorem- Reduction to Diagonal form-Reduction of Quadratic form to Canonical form-Nature of a Quadratic form- Complex matrices .

UNIT II

Differential Equations: Differential Equations of First Order and first degree-Exact Differential Equations-Equations Reducible to Exact Equations. Linear Differential Equations of Higher Order: Definitions- Operator D- Rules for finding the Complementary Function- Inverse Operator- Rules forfinding Particular Integral- Working Procedure.

UNIT III

Differential Calculus: Fundamental Theorems-Rolle's Theorem- Lagrange's Mean Value Theorem- Cauchy's Mean Value Theorem and Taylor's Theorem- Expansions of functions-Maclaurin's Series and Taylor's Series. CurvatureRadius of Curvature-Maxima and minima of functions of Two variables-Lagrange's method of undetermined multipliers.

UNIT IV

Linear Programming: Method of Variation of Parameters, Method of Undetermined Coefficients, Equations Reducible to Linear Equations with Constant Coefficients: Cauchy's Homogeneous Linear Equation, Legendre's Linear Equation, Linear Dependence of Solutions, Simultaneous Linear Equations with Constant Coefficients.

Course Category	Basic Science	Credits	3
Course Type	Theory	L-T-P	3-0-0
Prerequisites	10 + 2 level Physics	Continuous Eval Semester End Eval Total Marks	30 70 100

COURSE OUTCOMES

- 1. Understand the importance of quantum mechanics.
- 2. Analyse and understand various types of lasers and their applications.
- 3. Elaborate different types of optical fibers and understand the concept of Superconductivity.
- 4. Understand the fabrication of nanomaterials and carbon Nanotubes.

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

CO	PO PSO												Ľ	POI		
CO	1	2	3	4	5	6	7	8	9	10	11	12	1	2	B	1 01
1	3												1		2	
2	3		2										1		4	
3	3		1										1		2	
4	3				2								1		2	

COURSE CONTENT

UNIT I

Quantum Mechanics: Dual nature of light, Matter waves and Debroglie's hypothesis, Davisson-Germer's experiment, G. P. Thomson experiment, Heisenberg's uncertainty principle and its applications (Non existence of electron in nucleus, Finite width of spectral lines), One dimensional time independent and time dependent Schrödinger's wave equations, physical significance of wave function, Particle in a box (One dimension).

UNIT II

Lasers: Introduction, Characteristics of laser, Basic Principles of lasers (absorption, spontaneous emission, stimulated emission), Requirements of lasers (pumping, population inversion, cavity resonance), Einstein's coefficients, different types of lasers: solid-state lasers (Ruby, Neodymium), gas lasers (He-Ne, CO₂), Semiconductor laser, applications of lasers in science, engineering and medicine.

UNIT III

Fibre Optics: Introduction, Fundamentals of optic fibre, Propagation of light through optical fiber, Types of optical fibers, Numerical aperture, Fractional Refractive Index change, Fiber optics in communication and its advantages.

Superconductivity: Introduction, Critical parameters, Flux quantization, Meissner effect, Types of Superconductors, BCS theory, Cooper pairs, London's equation- penetration depth, high temperature super conductors, Applications of superconductors.

20ES1103 PROGRAMMING FOR PROBLEM SOLVING

Course Category	Engineering Science	Credits	3
Course Type	Theory	L-T-P	3-0-0
Prerequisites	_	Continuous Eval Semester End Eval Total Marks	$30 \\ 70 \\ 100$

COURSE OUTCOMES

- 1. Understand the different types of problem solving approaches.
- 2. Apply the selections, loops, arrays, and string concepts in C to solve problems.
- 3. Apply functions and pointer concepts in C to solve problems.
- 4. Solve problems using enum, structures, unions, and file handling functions.

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

CO	PO										PS	SO	L	DOI		
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	B	1 01
1	3	1													2	
2		2	3										2		3	
3		2	3										3		3	
4		2	3										3		3	

COURSE CONTENT

UNIT I

Introduction to computer-based problem solving: Requirement of problem solving by computers, problem definition, Use of examples for problem solving, similarities between problems, Problem solving strategies, steps involved in problem solving.

Program design and implementation issues: Programs and algorithms, topdown design and step-wise refinement, construction of loops-basic programming constructs, Implementation, programming environment.

Algorithms for problem solving: Exchanging values of two variables, Summation of a set of numbers, decimal to binary base conversion, reversing the digit of an integer, to find greatest common divisor (GCD) of two numbers, to verify whether an integer is prime or not, organize a given set of numbers in ascending order, find the square root of an integer, factorial of a given number, generate the Fibonacci sequence for n terms, evaluate $\sin(x)$ as sum of series, to find the value of the power of a number raised by another integer, reverse order elements of an array, find largest

number in an array, print elements of upper triangular matrix, multiplication of two matrices, to compute to roots of a quadratic equation $ax^2+bx+c=0$.

UNIT II

Introduction to the C Language: Background of C program, Identifiers, Types, Variables, Constants, Memory Layout, Input/Output, Programming Examples.

Structure of a C Program: Structure of a C Program: Logical Data and Operators, Expressions, Precedence and Associatively, Evaluating Expressions, Type Conversion, Statements, Storage Class.

Selection: Two-way Selection, Multiway Selection, More Standard Functions.

Repetition: Concept of a Loop Loops In C, Loop Examples, Recursion, The Calculator Program.

Array: Array Concepts in C, Inter-Function Communication, Array Applications, Two Dimensional Arrays, Multidimensional Arrays.

UNIT III

Strings: String Concepts, C Strings, String Input/Output Functions, Arrays of Strings, String Manipulation Functions, String-Data Conversion.

Functions: Functions in C, User Defined Functions, Call by Value, Call Value Reference, Inter-Function Communication, Standard Functions, Scope.

Pointers: Introduction to Pointer, Pointers for Inter-Function Communications, Pointers to Pointers, Compatibility, Lvalue and Rvlaue.

Pointer Applications: Arrays and Pointers, Pointer Arithmetic and Arrays, Passing an Array to a Function, Memory Allocations Functions, Array of Pointers.

UNIT IV

Enumerations: The Type Definition (Typedef), Enumerated Types: Declaring an Enumerated Type, Operations on Enumerated Types, Enumeration Type Conversion, Initializing Enumerated Constants, Anonymous Enumeration: Constants, Input/Output Operators.

Structures: Structure Type Declaration, Initialization, Accessing Structures, Operations on Structures, Complex Structures, Structures and Functions, Sending the Whole Structure, Passing Structures through Pointers.

Unions: Referencing Unions, Initializers, Unions and Structures, Internet Address, Programming Applications.

File Handling: Files, Streams, Standard Library Input/Output Functions, Formatting Input/output Functions and Character Input/Output Functions, Command-Line Arguments.

20ES1104 BASICS OF ELECTRICAL ENGINEERING

Course Category	Engineering Science	Credits	3
Course Type	Theory	L-T-P	3-0-0
Prerequisites	_	Continuous Eval Semester End Eval Total Marks	$30 \\ 70 \\ 100$

COURSE OUTCOMES

- 1. Analyze Electric Circuit fundamentals.
- 2. Understand the basic concepts of Alternating Quantities and Magnetic Circuits.
- 3. Analyze the basic concepts of Electric Machines.
- 4. Understand Measuring Instruments & Solar Photo Voltaic System concepts.

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

CO		PO													ΓL	DOI

2	3	3											1		2	
3	2	1			2								1		4	
4	2	1											1		2	

COURSE CONTENT

UNIT I

Introduction to Electrical Engineering: Electric Current, Electromotive force, Electric power and energy, Basic circuit components- Resistors-Inductors-Capacitors. Electromagnetic Phenomenon and Related Laws, Kirchhoff's laws.

Network Analysis: Network sources- Ideal independent voltage source, Ideal independent current source, Dependent sources, Practical voltage and current sources, Source conversion, Voltage and Current division rule, series and parallel connection of R, L and C, Star-Delta or, Delta- Star transformation. Mesh and Nodal Analysis (with independent sources only).

UNIT II

Alternating Quantities: Introduction, Generation of a.c. voltages, Waveforms and Basic Definitions, Relationship between frequency, speed and number of poles, Root Mean Square and Average values of alternating current and voltages, Form Factor and Peak Factor, Phasor representation of alternating quantities.

Magnetic Circuits: Introduction, Magnetic Circuits, Magnetic Field Strength (H), Magneto motive Force, Permeability, Reluctance, Analogy between Electric and Magnetic Circuits, Magnetic potential drop, Magnetic circuit computations, Self and Mutual Inductance, Energy in Linear Magnetic Systems (Derivation for pure inductor).

UNIT III

DC Machines: Introduction, Construction of dc machines, Armature Windings, Generation of dc voltage and torque production in a dc machine,Operation of a dc machine as a generator, Operation of dc machine as a motor.

Induction Motors: Introduction, Constructional features of three-phase induction motors, Principle of operation of three-phase induction motor- Slip and rotor frequency, Voltage and current equations and equivalent circuit of an induction motor.

UNIT IV

Measuring Instruments: Introduction, Classification of instruments, Operating Principles, Essential features of measuring instruments, Ammeters and Voltmeters, Measurement of power.

Solar photovoltaic Systems: Solar cell fundamentals, characteristics, classification, module, panel and array construction, Maximizing the solar PV output and load matching, Maximum Power Point Tracker Basic Algorithm and Flowchart, PV system components, solar PV systems and solar PV applications.

TECHNICAL ENGLISH AND COMMUNICATION SKILLS

Course Category	Humanities and Social Science	Credits	2
Course Type	Theory	L-T-P	2-0-0
Prerequisites	Basic understanding of the language skills viz Listening, Speaking, Reading and Writing, including Sentence construction abilities.	Continuous Eval Semester End Eval Total Marks	30 70 100

COURSE OUTCOMES

- 1. Develop administrative and professional compilations with felicity of expression.
- 2. Demonstrate Proficiency in advanced reading and context oriented writing.
- 3. Apply the elements of functional English with sustained understanding for authentic use of language in any given academic and/or professional environment.
- 4. Execute tasks in Technical communication with competence.

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

COURSE CONTENT

UNIT I

Professional Writing Skills

Professional Letters: Business, Complaint and Transmittal – Purpose, Style and format with special reference to Block Format and Modified Block Format.

Paragraph and Essay Writing: Linkers, Descriptive and Analytical with illustrations.

Effective Writing Practice: Appropriateness. Brevity, clarity, cogency and co-

herence with guided and semi-controlled compilations including the use of Idiomatic expressions.

UNIT II

Reading comprehension and Discourse development Skills

Analytical and critical reading: Critical, creative and lateral thinking- language and thinking – thinking process and and language development.

Effective reading Strategies: Skimming, Scanning, Eye span, fixation, taming Regression, and Issues and Challenges of Vocalization and sub-vocalization.

Context-oriented Dialogue/ Argument writing: Extending Invitation, Reciprocation, Acceptance, Concurrence, Disagreeing without being disagreeable- Discourse/dialogue Development and identification of inconsistencies in pre-prepared dialogues.

UNIT III

Vocabulary and Functional English

Vocabulary for Competitive examinations: A list of 500 High frequency words Synonyms, Antonyms, Matching Homonyms, Homophones and nearer words along with Root words.

Verbal analogies: Single Unit – Synonym Relation, Antonym relation, Object-Operator relation, Object-Obstacle/obstruction relation, Sequence Relation, Place-Monument Relation, Science- area of activity relation, Profession- Tool relation, Gender relation, Diminutive relation, etc.

Functional Grammar: with special reference to Tense, Concord, Articles, pronounreferent, Prepositions, use of Gerund, Parallelism, etc. (A Representative collection of 100 sentences).

UNIT IV

Technical Communication skills

Technical Proposal writing: Characteristics, Proposal Superstructure, Checklist, Formal Proposal.

Technical Vocabulary: Basic explanations and Description.

Technical Report writing: Informational Reports and Feasibility Report- Types, Components, Style and Formats.

20MC1106 TECHNOLOGY AND SOCIETY

Course Category	Mandatory Course	Credits	
Course Type	Mandatory Learning	L-T-P	1-0-0
Prerequisites	_	Continuous Eval Semester End Eval	100
		Total Marks	100

COURSE OUTCOMES

- 1. Understand the origins of technology and its role in the history of human progress.
- 2. Know the Industrial Revolution and its impact on Society.
- 3. Interpret the developments in various fields of technology till Twentieth Century.
- 4. Distinguish the impacts of Technology on the Environment and achievements of great scientists.

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

CO		PO													Ŀ	DOI
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	B	1 01

2	3				2		1								2	
3	3							1							2	
4	3				2		1								3	

COURSE CONTENT

UNIT I

Introduction: Origins of technology, The Agriculture revolution, Technological contributions of ancient civilizations- Mesopotamians, Egyptians, Greeks, Romans, Indians and Chinese.

UNIT II

Industrial revolution: The social and political background, The technical background, Steam: The power behind the Industrial Revolution, The revolution in Textile Industry, The Impact of Industrial Revolution on Society.

UNIT III

The Flowering of modern technology: Manufacturing Technologies, Prime Movers, Internal Combustion Engines, Production of Metals and Alloys, The Birth of Electrical Technology, Twentieth Century: The Flowering of modern technology like information technology and biotechnology, and its implications on society.

UNIT IV

Technology, Science and Society: Impact of technology on society, The Impacts of Technology on the environment, Sustainable development.

Achievements of famous scientists: (World): Einestein, Newton, Faraday, Graham Bell, Edison, S.Hawking. (India): CV Raman, S.Chandrasekhar, Aryabhatta, Homi J Bhabha, Vikram Sarabhai, APJ Abdulkalam, S.Ramanujan, M.Visweswarayya.

TEXTBOOKS

20ES1152 PROGRAMMING FOR PROBLEM SOLVING LABORATORY

Course Category	Engineering Science	Credits	1.5
Course Type	Laboratory	L-T-P	0-0-3
Prerequisites	_	Continuous Eval Semester End Eval Total Marks	30 70 100

COURSE OUTCOMES

- 1. Implement the use of programming constructs in a structural programming language.
- 2. Apply the selections, loops, arrays, and string concepts in C to solve problems.
- 3. Apply functions, pointer, and Enum concepts in C to solve problems.
- 4. Solve problems using structures, Unions, and file handling functions.

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

CO	PO											PSO E			DOI	
00	1	2	3	4	5	6	7	8	9	10	11	12	1	2	B	I OI
1	1		3												4	
2		1	3										1		3	
3		1	3										3		3	
4		1	3										3		3	

COURSE CONTENT

Week 1: Introduction to C Programming

- 1. The Structure of C Program with a sample program.
- 2. Use identifiers, data types, format specifiers, constants, and variables declaration and initialization to write simple C programs.
- 3. Write simple C programs using preprocessor commands and simple I/O statements.

Week 2: Data Types and Variable Declarations

- 1. Use void, integral and floating point data types in different scenarios to write programs.
- 2. Use various primitive data types for performing different mathematical operations.
- 3. Programs to perform mathematical operations using various operators in C.

Week 3: Selection – Making Decisions

1. Write programs using the if...else selection statements.

- 2. Use nested if...else statement to solve problems that need multi-level selection making decisions.
- 3. Write programs that use switch...case and else...if multi way statements to select one out of several options.

Week 4: Looping Constructs and Their Applications

- 1. To have a clear idea on loop initialization, validation and updation.
- 2. Write programs using the while, for, or do...while loops.
- 3. To understand the logic and adopt best looping construct for different kinds of problems.
- 4. Design and develop programs based on Iterative loops using While, Do While, For and Nested For.

Week 5: Unconditional Control Transfer Statements

- 1. Write programs using of (break, and continue) unconditional control transfer statements.
- 2. Use the goto statement to transfer the control from one part to another part of a program.
- 3. Use of return statement to end the execution of a called function.

Week 6: Arrays and Their Applications

- 1. To utilize one dimensional and multi-dimensional arrays to solve problems that use set(s) of similar type input data.
- 2. To write programs that perform multiple classical operations like searching, sorting, updation, or deletion on array elements.

Week 7: Strings, String I/O and Manipulation Functions

- 1. To write programs that work on read, write and manipulate fixed length and variable-length strings and/or arrays of strings
- 2. To write programs that use predefined string I/O functions.
- 3. To write programs that use string manipulation functions from the string library.

Week 8: Concepts of User Defined Functions

- 1. Design and develop programs depending on functions both user defined and standard library functions in C with different approaches.
- 2. To write a program using more than one function with or without parameters and function return type.

Week 9: Pointers and Their Applications

- 1. Programs on declaration of pointers and their usage in C.
- 2. Programs to relate between arrays and pointers and use them efficiently in a program.
- 3. To pass pointers as an argument to a function, and use it efficiently in a program.
- 4. To write programs using static and dynamic memory allocation.

VR20

Week 10: Structure, Union, and Enumeration

- 1. Programs to define, declare and access structure and union variables.
- 2. Design and develop programs to work with pointers to access data within a structure.
- 3. Programs to pass structure as an argument to a function.
- 4. To write C programs using enumeration data types, an easiest way of mapping symbolic names to integer values.

Week 11: File Handling Operations

- 1. Programs to open and close text and binary files using file I/O commands.
- 2. Write programs to perform read and write operations using the formatting I/O and character I/O functions.
- 3. Apply file positioning, status and system commands based on a problem requirements. functions

Week 12: Command Line Arguments

- 1. To use command line arguments to pass inputs in a single line while executing a program through the DOS command prompt or Linux terminal.
- 2. To use atoi function to convert a default string value argument to an integer value inside the main function in a program.
- 3. To use atof function to convert a default string value argument to a float value inside the main function in a program.

TECHNICAL ENGLISH AND COMMUNICATION LABORATORY

Course Category	Humanities and Social Science	Credits	1.5
Course Type	Practical	L-T-P	0-0-3
Prerequisites	Basic understanding of the language skills viz listening, speaking, reading and Writing, including Sentence construction abilities	Continuous Eval Semester End Eval Total Marks	30 70 100

COURSE OUTCOMES

- 1. Develop active and authentic listening comprehension skills relevant for the professional world.
- 2. Execute web related (On-line) communication with felicity of expression.
- 3. Apply relevant speech patterns including standard pronunciation.
- 4. Demonstrate Proficiency in Interpersonal Communication with fluency and accuracy.

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

CO							PO						PS	SO	ΓĽ	DOI
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	B	I OI
1						3				3					4	
2									2	3					4	
3										3					3	
4									2	3					3	

COURSE CONTENT

UNIT I

Listening Skills

Exposure to structured and open talks: Active listening, Appreciative listening, Biased listening, Critical listening Empathetic listening, Judgmental listening.

Content-oriented Listening Skills: Short Conversations- 5-10 minutes durationcomponents, statistics, nominal and other references.

Concept oriented/ purposive Listening skills: Long Conversations- 10-30 minutes duration.

Problems in comprehension & retention: Note-taking practice – Listening tests.

Overcoming Barriers to listening: Physical & psychological – Steps to overcome them with demonstration and practice.

UNIT II

Professional and On-line drafting skills

Professional drafting skills: Circular, Notice, Executive summary.

E-mail etiquette: Awareness with Illustrations and practice.

Elements of Chat-room interaction: Courtesy, techniques of argumentation.

Written Response to web-content: Conciseness with accountability.

Data interpretation: Compiling analytical, comparative and critical observations by interpreting graphs, charts, etc.

UNIT III

Phonetics and Speech patterns

Speech Mechanism: Organs of speech and patterns of articulation of speech sounds **Vowels, Consonants and Diphthongs:** Transcription using International Phonetic Alphabet

Word Stress and Rhythm: Practice

Intonation pattern practice: Tones, Tone group boundaries and Tonal variations Strong forms and weak forms in Connected speech: Illustrations and Practice

UNIT IV

Interpersonal Spoken communication skills

Fluency and accuracy in speech: Improving self-expression

Listener oriented speaking: Interpersonal Conversation- Manner and Temper.

Developing persuasive speaking skills: Role play

Overcoming Barriers to speaking: Building self-confidence– through Conversation practice.

Improving responding capacity: Extempore speech practice.

20ES1154 COMPUTING AND PERIPHERALS LABORATORY

Course Category	Engineering Science	Credits	1
Course Type	Laboratory	L-T-P	0-0-2
Prerequisites	_	Continuous Eval Semester End Eval Total Marks	$30 \\ 70 \\ 100$

COURSE OUTCOMES

- 1. Able to assemble a PC and install operating system and other software.
- 2. Able to trouble shoot hardware and software issues.
- 3. Able to configure network settings to connect to internet.
- 4. Able to create documents, presentations and spread sheets using office productivity tools.

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

CO	PO												P	SO	E	DOI

3	3			1	2								3		3	
4	3									2			3		3	

COURSE CONTENT

PC Hardware/Software

Week 1: Identify the peripherals of a computer, components in a CPU and its functions. Draw the block diagram of the CPU along with the configuration of each peripheral and submit to your instructor.

Every student should disassemble and assemble the PC back to working condition. Lab instructors should verify the work and follow it up with a Viva. Also, students need to go through the video, which shows the process of assembling a PC. A video would be given as part of the course content.

Week 2: Every student should individually install MS windows on the personal computer. Lab instructor should verify the installation and follow it up with a Viva.

Every student should install Linux on the computer. This computer should have windows installed. The system should be configured as dual boot with both windows and Linux. Lab instructors should verify the installation and follow it up with a Viva. **Week 3:** Hardware Troubleshooting: Students have to be given a PC which does not boot due to improper assembly or defective peripherals. They should identify the problem and fix it to get the computer back to working condition. The work done should be verified by the instructor and followed up with a Viva.

Software Troubleshooting: Students have to be given a malfunctioning CPU due to system software problems. They should identify the problem and fix it to get the computer back to working condition. The work done should be verified by the instructor and followed up with a Viva.

Networks, Internet and World Wide Web

Week 4: Types of Network cables, connectors, crimping straight and crossover cables, identification of network devices (Hubs, Switches, Routers).

Week 5: Orientation & Connectivity Boot Camp: Students should get connected to their Local Area Network and access the Internet. In the process they configure the TCP/IP setting. Finally, students should demonstrate, to the instructor, how to access the websites and email.

Week 6: Wifi router configuration, connecting to internet, Static/Dynamic IP address configuration, DNS, Gateway, Security configuration.

Productivity tools

Week 7: Word Orientation: The mentor needs to give an overview of Microsoft (MS) office 2007/ equivalent (FOSS) tool word: Importance of MS office 2007/ equivalent (FOSS) tool Word as word Processors, Details of the three tasks and features that would be covered in word – Accessing, overview of components of toolbars, saving files, Using help and resources, rulers, format painter.

Week 8: Latex: Using LaTeX to create project certificate. Features to be covered: Formatting Fonts, Drop Cap, Applying Text effects, Using Character Spacing, Borders and Colours, Inserting Header and Footer, Using Date and Time option in both LaTeX.

Week 9: Creating project abstract Features to be covered: Formatting Styles, Inserting table, Bullets and Numbering, Changing Text Direction, Cell alignment, Footnote, Hyperlink, Symbols, Spell Check, Track Changes.

Excel

Week 10: Excel Orientation: The mentor needs to tell the importance of MS office 2007/ equivalent (FOSS) tool Excel as a Spreadsheet tool, give the details of the two tasks and features that would be covered in each. Using Excel – Accessing, overview of toolbars, saving excel files, Using help and resources.

Calculating GPA - Features to be covered: Cell Referencing, Formulae in excel – average, std. deviation, Charts, Renaming and Inserting worksheets, Hyper linking,

Count function, LOOKUP/ VLOOKUP, Sorting, Conditional formatting.

Power Point or Equivalent (FOSS) Tool

Week 11: Students will be working on basic power point utilities and tools which help them create basic power point presentation. Topic covered during this week includes: PPT Orientation, Slide Layouts, Inserting Text, Word Art, Formatting Text, Bullets and Numbering, Auto Shapes, Lines and Arrows in both LaTeX and Power point. Students will be given model power point presentation which needs to be replicated (exactly how it's asked).

Week 12: Concentrating on the in and out of Microsoft power point. Helps them learn best practices in designing and preparing power point presentation. Topics covered during this week includes: - Master Layouts (slide, template, and notes), Types of views (basic, presentation, slide master, notes etc), Inserting – Background, textures, Design Templates, Hidden slides.

SEMESTER II

20BS2101A PROBABILITY AND STATISTICS FOR DATA SCIENCE

Course Category	Basic Science	Credits	3
Course Type	Theory	L-T-P 3-	0-0
Prerequisites	Vectors, Integration, Curve Tracing.	Continuous Eval Semester End Eval Total Marks	30 70 100

COURSE OUTCOMES

- 1. Understand Probability, random variables and probability distributions.
- 2. Understand the probability density functions.
- 3. Analyze random phenomena of sample to test the hypothesis concerning one mean.
- 4. Analyze random phenomena of sample to test the hypothesis concerning two mean and regression.

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

CO	PO												PS	SO	ΓL	POI
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	B	1 01
1	3	2		2	1										2	
2	3	2		2	1										2	
3	3	2		2	1										4	
4	3	2		2	1										4	

COURSE CONTENT

UNIT I

Probability Theory: Sample Spaces and events -Counting – Probability-The Axioms of Probability- Conditional Probability -Bayes' Theorem.

Probability Distributions Random variables –Binomial distribution - Mean and Variance of a Probability Distribution- The Poisson Approximation to the Binomial Distribution-Poisson Processes.

UNIT II

Probability Densities : Continuous random variables – The Normal Distribution – The Normal approximation to the Binomial Distribution .

Other Probability Densities : The Uniform Distribution – The Log Normal Distribution – The Gamma Distribution-The Beta D

UNIT III

Sampling Distributions : Populations and samples-sampling distribution of the mean-SD Known and Un known-the sampling distribution of the variance. **Inferences Concerning Mean** Point Estimation-Interval Estimation-Maximum error of estimate-Tests of Hypothesis – Null Hypothesis and Tests of Hypothesis – Hypothesis concerning one mean distribution – The Weibull distribution.

UNIT IV

Comparing Two treatments : Comparisons Two independent Large samples - Comparisons Two independent small samples – Matched pair of comparisons. **Regression Analysis :** The method of least squares - Multiple Regression- Correlation

20BS2102 ENGINEERING CHEMISTRY

Course Category	Basic Science	Credits	3
Course Type	Theory	L-T-P	3-0-0
Prerequisites	Chemistry knowledge at Intermediate level	Continuous Eval Semester End Eval Total Marks	30 70 100

COURSE OUTCOMES

- 1. Analyze various water treatment methods and boiler troubles.
- 2. Apply the concept of phase equilibrium to different materials and the knowledge of working of electrodes and batteries in various technological fields.
- 3. Evaluate corrosion processes as well as protection methods.
- 4. Apply the knowledge of conventional fuels and mechanistic aspects of conducting polymers for their effective and efficient utilisation.

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

CO							PO						PS	SO	Ľ	DOI
CO	1	2	3	4	5	6	7	8	9	10	11	12	1	2	B	1 01
1		3												3	4	
2	2												2		3	
3			3												3	
4					2										3	

COURSE CONTENT

UNIT I

Water technology-I: WHO standards - Water treatment for drinking purpose - sedimentation, coagulation, filtration, disinfection by chlorination, break point chlorination and its significance - Desalination of brackish water - principle and process of electrodialysis and reverse osmosis, advantages and disadvantages.

Water technology-II: Boiler troubles - scales-formation, disadvantages and internal conditioning methods - phosphate conditioning, calgon conditioning and sodium aluminate, caustic embrittlement- reasons, mechanism and its control, and boiler corrosion – causes and control.

UNIT II

Integral Calculus: Phase rule and applications: Definition and explanation of the terms – phase, component and degree of freedom, phase rule equation, phase equilibria of single component system – water system, two component system – silver-lead

system, applications of phase rule.

Electrochemistry: Construction and working of Calomel electrode, silver-silver chloride electrode, and principle, construction and working of glass electrode, determination of pH using glass electrode. Chemistry of modern batteries - Li/SOCl_2 battery and $\text{Li}_x\text{C}/\text{LiCoO}_2$ battery – construction, working and advantages. Fuel cells: General working principle of a fuel cell, examples, chemistry of H₂-O₂ fuel cell.

UNIT III

Corrosion principles: Introduction, definition, reason for corrosion, examples – types of electrochemical corrosion – hydrogen evolution and oxygen absorption – corrosion due to dissimilar metals, galvanic series – differential aeration corrosion – pitting corrosion and concept of passivity.

Corrosion control methods: Cathodic protection- principle and types - impressed current method and sacrificial anode method, anodic protection-principle and method, corrosion inhibitors – types and mechanism of inhibition – principle, process and advantages of electroplating and electroless plating.

UNIT IV

Conducting polymers: Definition, examples, classification-intrinsically conducting polymers and extrinsically conducting polymers- mechanism of conduction of undoped polyacetylene, doping of conducting polymersmechanism of conduction of p-doped and n-doped polyacetylenes – applications of conducting polymers.

Fuel technology: Fuel-definition, calorific value- lower and higher calorific values and numericals on calculation of HCV and LCV relation, analysis of coal – proximate analysis and ultimate analysis, flue gas analysis by Orsat's apparatus, numericals based on calculation of air required for combustion.

20ES2103C PROGRAMMING ESSENTIALS IN PYTHON

Course Category	Engineering Science	Credits	3
Course Type	Theory	L-T-P	3-0-0
Prerequisites	20ES1103 - Programming for Problem Solving	Continuous Eval Semester End Eval Total Marks	$30 \\ 70 \\ 100$

COURSE OUTCOMES

- 1. Understand the python syntax and semantics of control flow statements
- 2. Apply functions, modules and string handling in Python to solve problems
- 3. Analyze the methods to create and manipulate programs with Python data structures
- 4. Analyse the concepts of object-oriented approach to solve problems

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

CO		РО													ΓL	POI
CO	1	2	3	4	5	6	7	8	9	10	11	12	1	2	BJ	1 01

2			1		2						1		1		3	
3		1	1		1						1		2		3	
4		3	2		2						2		3		4	

COURSE CONTENT

UNIT I

Basics of Python Programming : Features, History, future of python, , writing and executing first python program, Literal constants, variables and identifiers, data types, input operation, comments, reserved words, indentation, operators and expressions, expressions, Type conversion.

Decision control statements: Introduction, Selection/conditional branching statements, Basic loop structures/iterative statements, Nested loops, break, continue and pass statements

Strings: Concatenating, appending and multiplying strings, immutability, String formatting operator, built-in string methods and function, slice operation

UNIT II

Lists: Access and update values in lists, nested and cloning lists, basic list operations, List methods, Using lists as Stack and Queues, list comprehensions, looping in

lists, functional programming:filter(), map(), reduce() functions. .

 ${\it Tuple:}$ Creating tuple, utility of tuples, accessing values in a tuple, updating tuple, deleting elements in tuple, basic tuple operations

Sets and Dictionaries:Creating a Set and set operations, Creating a dictionary, accessing values, add, modify, delete, sort items in a dictionary, looping over a dictionary.

Functions and Modules: Introduction, function declaration and definition, function definition, function call, variable scope and lifetime, the return statement, recursive functions, modules, packages in python.

UNIT III

File and Handling: Introduction, Types of files, Opening and Closing of files, Reading and Writing files, file position, renaming and deleting files, Directory Methods.

Error and Exceptional Handling: Introduction to errors and exceptions, handling exceptions, multiple except blocks, multiple exceptions in a single block, except block without exception, the else clause, raising exceptions, built-in and userdefined exceptions, the finally block.

Regular Expression match(), search(), sub(), findall(), finditer() Functions, Flag Option, Meta-Characters in Regular Expression .

Classes and Objects: Introduction, classes and objects, class method and self argument, init() method, class and object variables, del() method, other special methods, public and private data members, private methods, calling a class method from another class method, built-in class attributes, garbage collection, class and static methods.

UNIT IV

Polymorphism:Introduction, implementing operator overloading, reverse adding, overriding getitem() and setitem() methods, overriding the in operator, overriding miscellaneous functions, overriding the call() method.

Inheritance: Introduction, inheriting classes in python, types of inheritance, composition/containership/complex objects, abstract classes and interfaces, Meta class.

Python Packages for Data Exploration: Introduction to numpy for handling arrays, matplotlib: Controlling the line properties of a chart, creating multiple plots, styling your plots, Box plots, Heatmaps, Scatter plots with histograms, Area plots, Bubble charts.

SELF STUDY

String functions: ord(), chr() functions, in and not in operators.

Standard Library modules, Globals(), Locals(), Reload(), date, time, sys

Comparing, iterating string, the String module, Re-raising exception, Assertions in python

2	3	3													2	
3	2				2										2	

COURSE CONTENT

UNIT I

Electronic Components: Passive components - resistors, capacitors and inductors (properties, common types, I-V relationship and uses). Semiconductor Devices: Semiconductor Devices - Overview of Semiconductors - basic principle, operation and characteristics of PN diode, Zener diode, BJT, JFET, optoelectronic devices (LDR, photodiode, phototransistor, solar cell, photo couplers).

UNIT II

Transducers: Transducers - Instrumentation - general aspects, classification of transducers, basic requirements of transducers, passive transducers - strain gauge, thermistor, Hall-Effect transducer, LVDT, and active transducers - piezoelectric and thermocouple -DHT, ULTRASONIC, PIR sensors.

UNIT III

Digital Electronics: Number systems - binary codes - logic gates Boolean algebra, laws and theorems - simplification of Boolean expression - Implementation of Boolean expressions using logic gates – standard forms of Boolean expression.

UNIT IV

Digital Communication: Block diagram of a basic communication system - frequency spectrum - need for modulation, Types of communication-Analog and Digital communication-Advantages and Disadvantages of Digital Communication, Time and frequency domain representation of signals, Sampling theorem, Nyquist rate and Nyquist interval, Pulse code modulation, Line coding-Various formats, Generation of digital modulation techniques-ASK, FSK, PSK.

2	2		3				3						2		2	
3	2		3				3						2		2	
4	1		3				3						1		2	

COURSE CONTENT

UNIT I

Introduction to Engineering Drawing: Principles of Engineering Graphics and their Significance.

Scales: Construction of plain and diagonal Scales.

Conic Sections: Construction of ellipse, parabola and hyperbola (Treatment is limited to Eccentricity or General method only).

UNIT II

Orthographic Projections: Principles of Orthographic Projections –Projections of Points, Lines (Treatment is limited to First Angle Projection) and Projections of Plane regular geometric figures (Up to Plane Inclined to both of the Reference planes).

UNIT III

Projections of Solids: Projections of simple solids such as Cubes, Prisms, Pyramids, Cylinders and Cones with varying positions (Limited to Solid Inclined to one of the Reference planes).

Introduction to AutoCAD: Basic introduction and operational instructions of various commands in AutoCAD. (Internal Evaluation only)

UNIT IV

Sections and Development of Surfaces of Right Angular Solids: Sections and sectional views of right angular solids of Prism, Pyramid and Cone, Development of surfaces of Right Regular Solids of Prism, Pyramid and Cone.

Isometric Projections: Conversion of isometric views into Orthographic Projections of simple castings using Auto CAD. (Treatment is limited to simple objects only, Internal Evaluation only).

20ES2152C PROGRMMING ESSENTIALS IN PYTHON LABORATORY

Course Category	Engineering Science	Credits	1.5
Course Type	Laboratory	L-T-P	0-0-3
Prerequisites	20ES1152 - Programming for Problem Solving	Continuous Eval Semester End Eval Total Marks	30 70 100

COURSE OUTCOMES

- 1. Demonstrate the usage of Python syntax and semantics in solving the problems.
- 2. Develop python programs using functions and built in modules.
- 3. Implement Python data structures to solve the complex problems.
- 4. Apply object oriented concepts to design solution to real world scenarios.

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

CO	PO													SO	Ľ	DOI
CO	1	2	3	4	5	6	7	8	9	10	11	12	1	2	B	1 01
1	2	2	1		2					1			3		3	
2			1		2					1			1	2	4	
3		1	1		1					1			2	2	4	
4		2	2		2					2			3		3	

COURSE CONTENT

Implement the following programmes using IDE's (pycharm, jupyter notebook, spyder etc.,)

Week 1: Declaration of variables, identifiers and type conversions

- 1. Write simple programs by defining variables and assigning values of different basic data types.
- 2. Write programs to know data type of a variable using Type statement.
- 3. Write programs to do multiple assignments at a time.
- 4. Write programs for writing multiple statements in a single line.
- 5. Use Input statement, type conversion.
- 6. Use different operators in programs.

Week 2: Python programs on Decision Control Statements, Looping Control Structures

1. Write programs using selection statements.

- 2. Implement programs on and conditional branching statements.
- 3. Design and develop programs using Iterative statements- while, for , nested loops.
- 4. Use Break, continue, pass statements in programs.
- 5. Understand the usage of else statement in loops with a case study.

Week 3 : Solve the problems using Strings

- 1. Apply string formatting operator
- 2. Use built-in string methods and functions

Week 4: Programs on the implementation of methods and operations on List and Tuple data structures

- 1. Define a list and write programs to access and modify elements of a list.
- 2. Practice basic list operations, methods.
- 3. Write programs to use list as a stack and queue.

Week 5: Implement programs to solve the problems using Python other data structures: Tuples and Dictionaries

- 1. Write programs to define a dictionary and write programs to modify values, adding new keys.
- 2. Apply looping over a dictionary.
- 3. Use built in dictionary methods, functions.
- 4. Create a tuple and assign values.
- 5. Use basic tuple operations and comparisons.

Week 6: Identify the need and importance in the creation of Python Functions and Modules

- 1. Write programs to defining and calling Functions.
- 2. Understand Scope of a variable and Use gloabal statement.
- 3. Differentiate fruitful and void functions through a case study.
- 4. Apply recursive and Lambda functions .
- 5. Understand different kinds of arguments through a case study.
- 6. Installing and usage of standard library modules
- 7. Use python packages

Week 7: File and Exception Handling

- 1. Write a simple exception handling program with try- except.
- 2. Write a program for catching multiple exceptions.
- 3. Demonstrate raising and re raising exceptions .

Week 8: Regular Expressions

Week 9: Implement the Python classes and objects to address the real world scenarios

- 1. Define classes and objects using python for the real world scenario.
- 2. Defining constructors and using Self.

- 3. Understand public and private members.
- 4. Practice calling class methods from another class.
- 5. Write built in functions to check, get, set and delete attributes.

Week 10: Develop the programs to implement Inheritance and Polymorphism.

- 1. Demonstrate different inheritance types.
- 2. Apply polymorphism and method overriding.
- 3. Create abstract classes.
- 4. Demonstrate the usage of Polymorphism in the overloading of Operators

Week 11: Write the programs on Data Representation and Visualization

20ES2153 ENGINEERING WORKSHOP

Course Category	Engineering Science	Credits	1.5
Course Type	Laboratory	L-T-P	0-0-3
Prerequisites	_	Continuous Eval Semester End Eval Total Marks	30 70 100

COURSE OUTCOMES

- 1. Understand the basic joints using wood and familiarize with various fundamental aspects of house wiring.
- 2. Prepare basic models using sheet metal and practice joining of metals using arc welding technique.
- 3. Familiarize with various manufacturing processes such as injection moulding and 3D printing.
- 4. Understand the preparation of PCB.
- 5. Understand simple IoT Applications using Arduino.

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

CO	PO												PSO 1			DOI
00	1	2	3	4	5	6	7	8	9	10	11	12	1	2	B	FOI
1			2					1			3	2		2	2	
2			2					1			3	2	2	2	2	
3			2					1			3	2			2	
4						1							1	1	2	
5							2						1	1	2	

COURSE CONTENT

PART A

Carpentry

- 1. Demonstration of Cross half lap and T joints.
- 2. Demonstration of power tools.

Electrical Wiring

- 1. Fundamentals of Electric wiring and practice of Series wiring.
- 2. Practice of stair case wiring and connecting a fluorescent Tube.

Sheet metal and soldering

- 1. Preparation of complete funnel using sheet metal and practice of soldering.
- 2. Preparation of a square box using sheet metal and practice of soldering.

Welding

- 1. Preparation of Corner Joint using arc welding process.
- 2. Preparation of "T" joint using arc welding process.

Manufacturing processes

- 1. Preparation of a small plastic part using injection moulding process.
- 2. Demonstration of manufacturing a simple model using 3D printing process.

Electronic Circuits

To prepare PCB for the given electronic circuit

- 1. To prepare the layout and printing it on copper clad board.
- 2. To etch and drill the holes on PCB.

To solder the components on the PCB prepared and test the circuit

- 1. To identify and solder the components on the PCB prepared.
- 2. To test the operation of the circuit.

Basic IoT

Demonstration of Arduino board

- 1. Demonstrate different components and pin configuration of Arduino.
- 2. To set up Arduino IDE for programming.

To measure Temperature and Humidity

- 1. Interfacing of temperature and humidity sensor with Arduino.
- 2. Execute the program on Arduino IDE and display the measured values.

To measure Distance

- 1. Interfacing of Ultrasonic Sensor with Arduino.
- 2. Execute the program on Arduino IDE and display the measured value.

PART B

Group Activity: Students must prepare a working model/ assembly using the knowledge gained from the above trades.

TEXTBOOKS

- 1. Kannaiah P. Narayana K. C., "Manual on Workshop Practice", Scitech Publications, Chennai, 1999.

20MC2106 PROFESSIONAL ETHICS AND PRACTICE

Course Category	Mandatory Course	Credits	_
Course Type	Theory	L-T-P	1-0-0
Prerequisites	_	Continuous Eval Semester End Eval Total Marks	100

COURSE OUTCOMES

- 1. Know the moral autonomy and uses of ethical theories.
- 2. Understand engineering as experimentation.
- 3. Understand about safety, risk and professional rights.
- 4. Know the ethics regarding global issues related to environment, computers and weapon's development. Understand general principles of contracting.

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

CO	PO												PS	SO	E	DOI
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	B	I UI
1	2												2		2	
2					3										2	
3					3										2	
4											2				2	

COURSE CONTENT

UNIT I

Engineering Ethics: Senses of 'Engineering Ethics' - variety of moral issues- types of inquiry - moral dilemmas - moral autonomy - Kohlberg's theory - Gilligan's theory - consensus and controversy - Models of Professional Roles - theories about right action - Self-interest - customs and religion- uses of ethical theories.

UNIT II

Engineering as Social Experimentation: Engineering as experimentation – engineers as responsible experimenters - codes of ethics - a balanced outlook on law - the challenger case study.

UNIT III

Safety, Responsibilities and Rights: Safety and risk - assessment of safety and risk - risk benefit analysis and reducing risk – the three mile island and chernobyl case studies. Collegiality and loyalty – respect for authority - - collective bargaining

- confidentiality - conflicts of interest - occupational crime - professional rights - employee rights - Intellectual Property Rights (IPR) - discrimination.

UNIT IV

Global Issues: Multinational corporations- Environmental ethics- computer ethics - weapons development - engineers as managers-consulting engineers-engineers as expert witnesses and advisors - moral leadership sample code of Ethics (Specific to a particular Engineering Discipline).

General principles of contracts management: Indian contract act, 1972 and amendments covering general principles of contracting.

TEXTBOOKS

SEMESTER III

Course Category	Institutional Core	Credits	3
Course Type	Theory	L-T-P	3-0-0
Prerequisites	Set theory, Relations	Continuous Eval Semester End Eval Total Marks	30 70 100

COURSE OUTCOMES

- 1. Analyze of propositional calculus and first order logic.
- 2. Apply the basic and advanced counting techniques.
- 3. Analyze of relations and digraphs and their applications.
- 4. Analyze of graphs and their applications.

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

CO	PO											PSO E		ΓΓ	DOI	
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	B	1 01

4	3	3		1											4	1.2.1,2.5.3, 4.4.1

COURSE CONTENT

UNIT I

Propositional Calculus

Fundamentals of Logic: Propositions, Connectives, Propositional functions, Truth Tables, Tautology, Contradiction, Logical equivalences, Normal forms, Logical inferences, Methods of proof of an implication.

First Order Predicate Logic: Predicate, Quantifiers, and Rules of inference for Quantified propositions.

UNIT II

Counting Techniques

Basics of Counting: Sum and product rules, Indirect counting, One to One correspondence, Combinations and permutations, Enumerating combinations and permutations with and without repetitions.

Advanced Counting Techniques: Generating function of sequences, Recurrence
relations, Solving recurrence relations – substitution - Generating functions - The method of characteristic roots, Solution of inhomogeneous recurrences relations.

UNIT III

Relations and Digraphs

Relations and basic graphs, Special properties of binary relations, Equivalence relation, Partially ordered sets, Hasse diagrams, Lattices, Operations on relations, Paths and closures, Directed graphs and Adjacency matrices, Transitive closure, Warshall's algorithm.

UNIT IV

Graph Theory

Introduction(to graphs, sub graphs, circuits and trees), Sum of degrees theorem, Isomorphism and sub graphs, planar graphs, Euler's formula, Multi graphs and Euler's circuits, Hamiltonian graphs, Grin-berg's theorem, Graph coloring, Chromatic numbers.

$20\mathrm{ES3102}$

DIGITAL LOGIC AND COMPUTER DESIGN

Course Category	Engineering Science	Credits	3
Course Type	Theory	L-T-P	2-1-0
Prerequisites	-	Continuous Eval Semester End Eval	30 70
		Total Marks	100

COURSE OUTCOMES

- 1. Apply simplification techniques to minimize the Boolean functions.
- 2. Apply concepts of combinational logic to design MSI and LSI circuits.
- 3. Apply sequential logic techniques to design Counters and Registers.
- 4. Understand the organization and design of a basic computer.

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

0			2										1		0	3.7.1, 3.8.1
4		2											1		2	2.7.1, 2.7.2

COURSE CONTENT

UNIT I

Boolean Functions: Introduction to Boolean Functions, Boolean Functions Simplification - The Map Method, Two and three variable Maps, Four variable Map, Five variable Map, Product of Sums Simplification, Don't care conditions, The Tabulation Method, Determination of Prime Implicants, Selection of Prime-Implicants.

Combinational Logic: Introduction, Design Procedure, Adders, Subtractors, Code Conversions, Exclusive-or Gates, Parity Generators and Checkers.

UNIT II

Combinational Logic with MSI and LSI: Binary Parallel Adder, Decimal Adder, Magnitude Comparator, Decoders, Demultiplexers, Encoders, Multiplexers. **Programmable Logic:** Read Only Memory (ROM), Programmable Read Only Memory (PROM), Programmable Logic Array (PLA), Programmable Array Logic (PAL), Introduction to FPGA.

UNIT III

Sequential Logic: Sequential circuits, Classification, Latches, Flip Flops, Triggering of Flip-Flops, Master slave flip-flop, Flip-Flop Excitation tables, flipflop direct inputs. Analysis of Clocked Sequential Circuits, State table, State diagram, state equations, State Reduction and Assignment, Design Procedure, design with unused states.

Registers, Counters: Registers, Shift Registers, Asynchronous Counters, Synchronous Counters, Ring Counter, Johnson Counter, Timing Sequences.

UNIT IV

Register Transfer and Micro-Operations: Register Transfer Language, Register Transfer, Bus and memory Transfers, Arithmetic Micro-operations, Logic Micro-operations, Shift Micro-operations, Arithmetic Logic Shift Unit.

Basic Computer Organization and Design: Instruction codes, Computer Registers, Computer Instructions, Timing and Control, Instruction cycle, Memory Reference Instructions, Input-Output and Interrupt, Design of Basic Computer, Design of Accumulator Logic.

COURSE CONTENT

UNIT I

Introduction to Database Systems: Introduction, An example, Characteristics of Database Approach, Advantages of Using the DBMS Approach, A Brief History of

Database Applications.

Database System - Concepts and Architecture: Data Models, Schemas and Instances, Three-schema Architecture and Data Independence, Database Languages and Interfaces, The Database System Environment.

SQL Schema Definition, SQL Data Definition and Data Types , Specifying constraints in SQL, Basic retrieval queries in SQL, Additional features of SQL, More complex SQL Queries, Insert, Delete and Update statements in SQL, Joined Tables in SQL and Outer Joins, Aggregate functions, The GROUP BY and HAVING Clauses, Specifying Constraints as Assertions and Triggers, Views (Virtual Tables) in SQL, Schema Change Statement in SQL.

UNIT II

Data Modeling Using the Entity-Relationship Model: Using High-Level Conceptual Data Models for Database Design; Entity Types, Entity Sets, Attributes and Keys; Relationship types, Relationship Sets, Roles and Structural Constraints; Weak Entity Types.Refining the ER Design, ER Diagrams, Naming Conventions, Relational Database Design using ER-to-Relational Mapping.

Relational Data Model and Relational Database Constraints: Relational Model Concepts, Relational Model Constraints and Relational Database Schemas, Update Operations, Transactions and Dealing with Constraint Violations.

Relational Algebra: Unary Relational Operations, SELECT and PROJECT, Relational Algebra Operations from Set Theory Binary Relational Operations: JOIN and DIVISION, Additional Relational Operations, Examples of Queries in Relational Algebra.

UNIT III

Relational Database Design: Functional Dependencies; Normal Forms Based on Primary Keys; General Definitions of Second and Third Normal Forms; Boyce-codd Normal Form; Properties of Relational Decomposition; Multivalued Dependencies, Fourth Normal Form and Fifth Normal Form.

Transaction Processing: Introduction to TransactionProcessing, Transaction and System Concepts, Desirable Properties of Transactions.

UNIT IV

Concurrency Control and Recovery: Two-Phase Locking Techniques for Concurrency Control, Recovery Concepts, NO-UNDO/REDO Recovery Techniques based on Deferred Up-date, Recovery Techniques Based on Immediate Update, Shadow Paging, The ARIES Recovery Algorithm.

Query Processing: Overview, Measures of Query Cost.

COURSE CONTENT

UNIT I

Introduction, History and Evolution of Java: Java history and evolution, Java features, Java's Magic: Byte Code, How Java differs from C and C++.

An Overview of Java: Object Oriented Programming: Two paradigms, Principles of OOP, A First simple Program and Control statements.

Data Types, Variables and Arrays: Java keywords, Primitive types, Integers, Floating-Point Types, Characters, Booleans, Variables, Operators, Type Conversion, Casting and Arrays.

Introducing Classes and Objects: Class fundamentals, declaring objects, assigning object reference variables, introducing methods, constructors, this keyword, Garbage collection, overloading methods using objects as parameters, returning objects, static and final keywords, nested and inner classes.

UNIT II

String Handling: The String Constructors, String Buffer Class, String Tokenizer class.

Inheritance: Inheritance basics, using super, multilevel hierarchy, method overriding, dynamic method dispatch, using abstract classes, final with inheritance.

Packages and Interfaces: Defining a package, finding package and CLASSPATH. Access protection, importing packages, Defining an interface, implementing interfaces, nested interfaces, applying interfaces, variables in interfaces.

UNIT III

Exception handling: Exception handling fundamentals, exception types, uncaught exceptions, using try and catch, multiple catch clauses, throw, throws, finally, creating your own exception sub-classes.

I/O streams: Byte Streams- InputStream, OutputStream, FileInputStream, FileOutputStream, Character Streams- Reader, Writer, FileReader, FileWriter.

Multithread Programming: The Java Thread Model, Creating a thread: Implementing Runnable, Extending Thread, creating multiple threads, Thread Priorities, Synchronization: Using Synchronized methods, The synchronized Statement.

UNIT IV

Pragmatic Functional Programming using Lambdas: Introduction to Functional programming, Functional Programming concepts and terminology, Functional Interfaces, Working with Lambda Expressions and Method References.

Collections Framework: Collections overview, Collection interfaces: Collection, List, and Set. Collection Classes: ArrayList, LinkedList, HashSet.Map Classes:Hash-Map, TreeMapJ

The Stream API: Stream basics, Reduction operations, Using parallel streams, Mapping, Collecting, Iterators and Streams.

COURSE CONTENT

UNIT I

Introduction: Algorithm specification, data abstraction, performance analysis-time complexity, space complexity, asymptotic notations, linear and binary searches complexity analysis. Insertion, Merge sort, Quick sort and their complexity analysis. **Stacks:** Definition, representing stacks, ADT stack and its operations: algorithms and their complexity analysis, Applications of stacks: expression conversion and evaluation - corresponding algorithms.

UNIT II

 ${\it Queues:}\,$ Queue and its sequential representation, queue as an abstract data type,

VR20

types of queue: simple queue, circular queue, operations on each types of queues: algorithms.

Linked lists: Representation in memory, singly linked lists: operations and algorithms; linked list representation of stack and queue, doubly linked list: operations and algorithms; circular linked lists: operations their algorithms.

UNIT III

Trees: Tree terminology, representation of trees, binary Tree, complete binary tree, expression trees construction and evaluation; binary tree traversals: inorder, preorder and postorder, binary search trees, operations on binary search trees. **Heap:**Min heap & max heap, operations on min Heap & max Heap, Heap sort.

UNIT IV

Graphs: Introduction, graph terminology, representation of graphs, graph traversal algorithms: breadth first search, depth first search.

Hashing and Collision: Introduction, hash tables, hash functions, different hash functions, collisions: collision resolution by open addressing, collision resolution by chaining, pros and cons of hashing.

20AI&DS3351 DATABASE SYSTEMS LABORATORY

Course Category	Program Core	Credits	1.5
Course Type	Laboratory	L-T-P	0-0-3
Prerequisites	_	Continuous Eval Semester End Eval Total Marks	30 70 100

COURSE OUTCOMES

- 1. Demonstrate DDL, DML and DCL statements with integrity constraints
- 2. Design relational database and manipulate the same using simple and complex queries in SQL $\,$
- 3. Develop Entity Relationship and the corresponding Relational models for the given real-world application
- 4. Illustrate database objects like Procedure, Functions, Triggers and Package using $\rm PL/SQL$
- 5. Apply transactions processing, Concurrency control and Recovery techniques on relational database

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

COURSE CONTENT

Task 1: Execute DDL, DML and DCL Commands on the suitable database.

- **Task 2:** Implement the following Integrity Constraints on relevant database. a. Primary Key, b. Foreign Key, c. Unique, d. Not NULL, e. Check
- **Task 3:** Execute the aggregate functions like count, sum and avg on the suitable database. Make use of built-in functions according to the need of database chosen. Retrieve data from the database based on date function.
- **Task 4:** Apply Set operations (UNION, UNION ALL, INTERSECT and MINUS), Sub-queries, Group by, Order by clause and Pattern Matching operators (LIKE, %, _) on fine-tuned Database.
- Task 5: Implementation of different types of Joins, Views and Ranks.
- **Task 6:** Draw ER diagram for an application with at least 3 entities and establish relationships between them using a tool. Perform ER to Relational mapping to derive Relational database.
- **Task 7:** Write PL/SQL procedure for an application using exception handling for the following; a. Predefined exceptions, b. User defined exceptions.
- $Task\ 8:$ Write a PL/SQL block for transaction operations of a typical application using triggers.
- **Task 9:** a. Create concurrent transactions and obtain concurrency control using SSMS. b. Utilizing recovery management, restore the database in case a catastrophic disk loss occurred.
- **Task 10:** For a sample schema join illustrate Choice of join algorithms that will perform query optimization. Also provide a graphical representation of execution plan of how the query optimizer chose to execute a query

DBMS Laboratory Projects

Design and Implement the given Database Application using the following requirements.

Database Analysis and Design:

- Build Conceptual schema using tools
- Apply Normalization process for relational database design
- Relational Model Database.

Implementation:

- Front End: Java/ Perl/ PHP/ Python/ Ruby/.net
- Backend: SQL/MySQL/SQLite,
- Database Connectivity: ODBC/ JDBC/ Servlets.

20AI&DS3352 JAVA PROGRAMMING LABORATORY

Course Category	Program Core	Credits	1.5
Course Type	Laboratory	L-T-P	0-0-3
Prerequisites	20ES1152 Programming for Problem Solving Laboratory	Continuous Eval Semester End Eval Total Marks	30 70 100

COURSE OUTCOMES

- 1. Design solutions to applications using object oriented approach using Java
- 2. Implement java technology to solve runtime errors and test the correctness of programs using exception handling and assertions.
- 3. Develop java applications to make use of I/O Streams and multithreading to solve real world problems.
- 4. Solve real world problems using Collections framework.

COURSE CONTENT

Task 1: Apply fundamentals of Java data types, variables, operators and control

Task 2: Apply the concepts of Classes and Objects.

Task 3: Apply the concepts of Arrays.

Task 4: Apply the concepts of String and String Tokenizer classes.

- Task 5: Apply the concepts of Inheritance and types of Inheritance.
- Task 6: Apply the concepts of Method Overloading and Method Overriding.

- Task 7: Apply the concepts of Packages.
- Task 8: Apply the concepts of Interfaces.
- Task 9: Apply the concepts of Exception Handling.
- **Task 10:** Develop a Java application to copy content from one file to another file using I/O Streams.
- Task 11: Apply the concepts of Threads and Multithread.
- **Task 12:** Apply the concepts of Lambda Expressions, Collections Framework and Stream API.
- **Project:** A group project with unique topics.

20TP3106 LOGIC AND REASONING

Course Category	Soft Skills - 1	Credits	1
Course Type	Learning by Doing	L-T-P	0-0-2
Prerequisites	_	Continuous Eval Semester End Eval Total Marks	100 0 100

COURSE OUTCOMES

- 1. Think reason logically in any critical situation.
- 2. Analyze given information to find correct solution.
- 3. To reduce the mistakes in day to day activities in practical life.
- 4. Develop time-management skills by approaching different shortcut methods.
- 5. Use mathematical based reasoning to make decisions.
- 6. Apply logical thinking to solve problems and puzzles in qualifying exams in any competitive exam.

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

20MC3107A ENVIRONMENTAL STUDIES

Course Category	Mandatory Course	Credits	-
Course Type	Theory	L-T-P	2-0-0
Prerequisites	Consciousness of Environment	Continuous Eval Semester End Eval Total Marks	100 00 100

COURSE OUTCOMES

- 1. Identify various factors causing degradation of natural resource and control measures.
- 2. Identify various ecosystem and need for biodiversity.
- 3. Realize and explore the problems related to environmental pollution and its management.
- 4. Apply the information and technology to analyze social issues, use acts associated with environment.

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

CO							PO						PS	SO	Ľ	DOI

3				1	1							1	1		2	
4						1	1	1					1		3	

COURSE CONTENT

UNIT I

The Multidisciplinary Nature of Environmental Studies Definition, scope and importance, need for public awareness.

Natural resources:

Renewable and Non-renewable Resources: Natural resources and associated problems.

- 1. *Forest resources:* Use and over-exploitation, deforestation. Timber extraction, mining, dams and their effects on forests and tribal people.
- 2. *Water resources:* Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems.

- 3. *Mineral resources:* Use and exploitation, environmental effects of extracting and using mineral resources.
- 4. *Food resources:* World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity.
- 5. *Energy resources:* Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources.
- 6. *Land resources:* Land as a resource, land degradation, man induced landslides, soil erosion and desertification. Role of an individual in conservation of natural resources. Equitable use of resources for sustainable lifestyles.

UNIT II

E cosystems

Concept of an ecosystem: Concept of an ecosystem. Structure and function of an ecosystem. Producers, consumers and decomposers. Energy flow in the ecosystem. Ecological succession. Food chains, food webs and ecological pyramids. Introduction, types, characteristic features, structure and function of the following ecosystem: (a) Forest ecosystem (b)Grassland ecosystem (c)Desert ecosystem (d)Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries)

Biodiversity and Its Conservation: Introduction, definition: genetic, species and ecosystem diversity. Biogeographically classification of India. Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values. Biodiversity at global, National and local levels. India as a mega-diversity nation. Hot-spots of biodiversity. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts. Endangered and endemic species of India. Conservation of biodiversity: in-situ and ex-situ conservation of biodiversity.

UNIT III

Environmental Pollution: Definition ,Causes, effects and control measures of (a) Air pollution (b) Water pollution (c) Soil pollution (d) Marine pollution (e) Noise pollution (f) Thermal pollution (g) Nuclear hazards

Solid waste management: Causes, effects and control measures of urban and industrial wastes. Role of an individual in prevention of pollution.

Disaster management: Floods, earthquake, cyclone and landslides.

UNIT IV

Social Issues and the Environment: From unsustainable to sustainable development. Urban problems related to energy.

Water conservation, rain water harvesting, watershed management. Resettlement and rehabilitation of people; its problems and concerns.

Environmental ethics Issues and possible solutions. Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust, wasteland recla-

Environment Protection Act: Air (Prevention and Control of Pollution) Act. Water (Prevention and Control of Pollution) Act. Wildlife Protection Act. Forest Conservation Act. Issues involved in enforcement of environmental legislation.

Public awareness: Human population and the environment, population growth, variation among nations, population explosion—family welfare program.

Environment and human health: Human rights, value education, HIV/ AIDS, women and child welfare, role of Information Technology in environment and human health.

Field Work/ Case Studies: Visit to a local area to document environmental assets — river/ forest/ grassland/ hill/ mountain. Visit to a local polluted site — Urban/ Rural/ Industrial/ Agricultural. Study of common plants, insects, birds. Study of simple ecosystems — pond, river, hill slopes, etc.

Self Study

Water resources, Threats to biodiversity, Solid waste management, role of Information Technology in environment and human health.

SEMESTER IV

20BS4101G NUMERICAL METHODS FOR DATA ANALYSIS

Course Category	Basic Science	Credits	3
Course Type	Theory	L-T-P	3-0-0
		Continuous Eval	30
Prerequisites	-	Semester End Eval	70
		Total Marks	100

COURSE OUTCOMES

- 1. Solve algebraic and transcendental equations, system of linear equations and estimate function values near end points for equally spaced arguments.
- 2. Estimate function values near middle points and derivative using polynomial interpolation.
- 3. Evaluate integrals numerically and solve initial value problems.
- 4. Apply Python modules for symbolic computation, to solve IVP and system of equations.

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

COURSE CONTENT

UNIT I

[Text Book-1]

Numerical Methods: Solution of Algebraic and Transcendental equations, Bisection method, Newton-Raphson method, Useful deductions from Newton-Raphson formula.

Solution of Linear Simultaneous Equations: Iterative methods of solution, Jacobi's Iterative method, Gauss-Seidel method. **Interpolation:** Finite differences, Differences of polynomial, Other difference operators, Relations between the operators, Newton's Interpolation formulae.

UNIT II

[Text Book-1]

Interpolation:

Central difference Interpolation formulae, Gauss Forward Interpolation formula, Gauss

Backward Interpolation formula, Stirling's formula, Interpolation with unequal intervals, Lagrange's formula for unequal Intervals, Divided differences, Newton's divided difference formula. Numerical Differentiation:

Derivatives using Newton's forward difference formula, Newton's forward difference formula.

UNIT III

Numerical Integration: Newton-Cote's quadrature formula, Trapezoidal rule, Simpson's one-thirdrule, Simpson's three-eighth rule. Numerical Solutions of Differential Equations: Introduction, Euler's method, Modified Euler's method, Runge-Kutta method of 4th order. Simultaneous First Order Differential Equations:Runge-Kutta method of 4th order.

UNIT IV

Numerical methods using Python: Symbolic computation, SymPy, Symbols, Numeric types, Differentiation and Integration, Ordinary differential equations, Linear equations and matrix inversion, Nonlinear equations, Visualizing data, Matplotlib, Pylab, Pyplot, SciPy, Numerical integration, Solving ordinary differential equations, Systems of coupled ODEs, Root finding using bisect method, Root finding using fsolve function, Interpolation.

20AI&DS4302 DESIGN AND ANALYSIS OF ALGORITHMS

Course Category	Program Core	Credits	3
Course Type	Theory	L-T-P	3-0-0
Prerequisites	20AI&DS3305 Data Structures and Algorithms	Continuous Eval Semester End Eval Total Marks	$30 \\ 70 \\ 100$

COURSE OUTCOMES

- 1. Understand different types of algorithms, asymptotic notations, and performance analysis techniques.
- 2. Apply the algorithm design technique string matching, divide and conquer, and greedy methods for solving different problems.
- 3. Apply dynamic programming, backtracking and branch and bound techniques to solve different problems.
- 4. Understand P, NP, NP-Hard, and NP-Complete problems.

COURSE CONTENT

UNIT I

Introduction: Algorithms, algorithms as a technology, recursive and randomized algorithms, growth of functions (Asymptotic notations), recurrences, Solution of Recurrences by substitution, recursion tree method, Master Theorem. Time complexity analysis of Merge and Quick sort.

String Matching: Naive string-matching algorithm, Rabin-Karp algorithm

UNIT II

Divide and conquer: General method, Finding the maximum and minimum, Strassen's matrix multiplication.

Greedy method: General method, Job sequencing with deadlines, knapsack problem, Huffman codes, Minimum cost spanning tree: Prims and Kruskal's algorithm, shortest path algorithms: Dijkstra

UNIT III

Dynamic Programming: General method, Matrix chain multiplication, longest common subsequence, optimal binary search trees, 0/1 knapsack problem, Traveling salesperson problem.

Backtracking: General method, n-queen problem, sum of subsets problem, graph coloring, Hamiltonian cycles, 0/1 knapsack problem.

UNIT IV

Branch and Bound: General method, applications - Traveling sales person problem, 0/1 knapsack problem: LC branch and bound solution, FIFO branch and bound solution.

NP-Hard and NP-Complete problems: Basic concepts, non-deterministic algorithms, P, NP, NP Hard and NP Complete problems with examples, Cook's theorem

20AI&DS4303 ADVANCED JAVA PROGRAMMING

Course Category	Program Core	Credits	3
Course Type	Theory	L-T-P	3-0-0
Prerequisites	20AI&DS3304:Java Programming	Continuous Eval Semester End Eval Total Marks	30 70 100

COURSE OUTCOMES

1. Understand the basics of HTML and XML.

- 2. Apply the concepts of Java Servlets for developing Dynamic Web Pages.
- 3. Apply the concepts of Java Server Pages to build a Web Application.
- 4. Apply Object relational Mapping Technology and basic Spring Concepts

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

CO			PO PS					SO	Ľ	POI						
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	B	1 01

4	1		0		2								0	0	2	1.7.1, 3.5.6, 3.8.2,
4					3										3	5.4.2

COURSE CONTENT

UNIT I: HTML and XML

HTML – Basic concepts of HTML, The Skeleton of a Web Page, Creating a Form, Tables.

XML – Use of XML, The XML Flow, XML Parsers, Browsers and XML, The Design of an XML Document, Nesting Elements, Processing Instructions, Attributes, Create a DTD, Create an XML Schema, Referencing an XML Schema, Create an XSLT.

UNIT II: JAVA SERVLETS

Java Servlets, Web Applications, Servlets and HTTP Servlets, Filters, Security, Internationalization, Servlet Life Cycle, Servlets for the World Wide Web – Requests, Responses, and Headers, GET and POST, HTTP Response Codes, Coding a HttpServlet – Deploying a Servlet, Web Application Deployment Descriptor

Structure, Servlet Configuration – Limitations of Configuration:web.xml Additions, Client/Server Servlet Programming, HttpServletRequest and HttpServletResponse, HttpServletRequest, Servlet Context – Initial Web Application Parameters, Servlet Event Listners.

UNIT III: JAVA SERVER PAGES

JSP 2.0 Specification– JSP, Java Beans, Custom Tags and JSP Fragments, Expression Language. JSP Lifecycle, Difference between Servlets and JSP, JSP Syntax and Semantics– Elements and Template Data, Two types of Syntax, Scripting Elements, Directives, JSP Configuration, Standard JSP Actions, White Space Preservation, Attributes, Comments, Quoting and Escape Characters, Implicit Objects – pageContext, out, config, page, JSP in XML Syntax – XML Rules, JSP Documents. JavaBeans and JSP Expression Language, JSTL Expression Language, Core Tags– General Purpose Tags, Iteration, Conditionals, URL Manipulation.

UNIT IV: HIBERNATE AND SPRING

Hibernate: An overview of Object-Relational Mapping (ORM) – Relationships and Cardinality, Object Identity, Cascade, Mapping, In-Memory versus Persisted Objects, Design of Database – Denormalization, Naming Convention, Database Design Disclaimers, DDL Script, HSQLDB, Working with Hibernate.

Spring Framework:Overview of Spring – Spring Packing for Development and Deployment, Overview of the Spring Modules, Benefits of using Spring, Fundamental Spring Concepts. Spring Web MVC Framework – Benefits, Spring Web MVC Concepts, Spring Setup, Developing User Interfaces with Spring.

TEXTBOOKS

- 1. Jim Keogh, "J2EE: The Complete Reference", McGraw Hill, 2002. (Unit I)
- 2. Jayson, Falkner, and Jones Kevin. "Servlets and Java Server Pages: The J2EE Technology Web Tier.", Addison-Wesley, 2004. (Unit II, III)
- 3. Hemrajani, Anil. Agile Java Development with Spring, Hibernate and Eclipse. Sams publishing, 2006. (Unit IV)

REFERENCE BOOKS

- 1. Hans Bergsten, "JavaServer Pages", 3rd Edition, O'Reilly Media, Inc., 2003.
- 2. Christian Bauer, Gavin King, "Hibernate in Action", Manning Publications, 2005.

- Building Cloud Services with the Java Spring Framework https://in.cours era.org/learn/cloud-services-java-spring-framework Last accessed on 01-12-2022

Course Category	Program Core	Credits	2
Course Type	Theory	L-T-P	2-0-2
Prerequisites	20AI&DS3305 Data Structures and Algorithms	Continuous Eval Semester End Eval Total Marks	$30 \\ 70 \\ 100$

COURSE OUTCOMES

- 1. Understand fundamentals of concepts of computer networks and reference models.
- 2. Analyze error and flow control mechanisms in data link layer.
- 3. Analyze subnetting and various routing protocols of network layer.
- 4. Analyze transport layer and application layer protocols for specific applications.

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

4	3	2	3										2		4	1.7.1, 2.6.3

COURSE CONTENT

UNIT I

Introduction: Uses of Computer Networks, Network Topology, Network Hardware: LANs, MANs, WANs, Connection oriented vs Connection less.

Reference Models: The OSI Reference Model, TCP/IP Reference Model, the comparison of the OSI and TCP/IP reference models.

Physical Layer: Guided transmission media: Magnetic Media, Twisted Pair, Coaxial Cable, and Fiber Optics, Wireless Transmission: Radio transmission, Infrared and Light Transmission.

UNIT II

Data Link Layer: Design issues - Framing, Error Detection and Correction Hamming Code , CRC, Checksum, Sliding Window Protocols – One bit sliding window, GoBack – N, Selective Repeat.

Medium Access Control Sub layer: Multiple access protocols- Aloha - Slotted Aloha - CSMA, CSMA/CD, Collision Free Protocols, Ethernet: Architecture, Frame

Formats – DIX, IEEE 802.3, Wireless LAN: Architecture and Protocol stack, IEEE 802.11 format.

UNIT III

Network Layer: Design Issues: Store and forward, Services to transport layer, Implementation of connection less and connection oriented, VC and Datagram Networks.

Routing Algorithms: Shortest Path, Flooding, DVR, and Link State routing algorithm, Congestion Control Algorithms. IPv4 Protocol, IP address- Classful Addressing – Classless Addressing – Network Address Translation, IPv6-Header, Extension Header

UNIT IV

Transport Layer: UDP Header, TCP Header, Connection establishment, Connection Release, Connection Management, Congestion Control.

Application Layer: The Domain Name System (DNS), and E-Mail - Architecture, Message Format – RFC 5322, MIME, SMTP.

20HS4105 UNIVERSAL HUMAN VALUES – II : UNDERSTANDING HARMONY

Course Category	Humanities and Social Sciences	Credits	3
Course Type	Mandatory Course (Suggested by AICTE)	L-T-P	3-0-0
Prerequisites	Universal Human Values - I desirable	Continuous Eval Semester End Eval Total Marks	$ \begin{array}{c c} 30 \\ 70 \\ 100 \end{array} $

COURSE OUTCOMES

- 1. Understand and aware of themselves and their surroundings (family, society and nature).
- 2. Handle problems with sustainable solutions, while keeping human relationships and human nature in mind.
- 3. Exhibit critical ability and become sensitive to their commitment towards their understanding of human values, human relationship and human society.
- 4. Apply what they have learnt to their own self in different day-to-day settings in real life.

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

COURSE CONTENT

UNIT I

Course introduction, need, basic guidelines, content and process for value education

Part-1: Purpose and motivation for the course, recapitulation from UHV-I, Self-exploration: what is it?, its content and process, 'Natural acceptance' and experiential validation- as the process for self-exploration. Continuous Happiness and Prosperity – A look at basic Human Aspirations.

Part-2: Right understanding, Relationship and Physical Facility – the basic requirements for fulfillment of aspirations of every human being with their correct priority,

Understanding Happiness and Prosperity correctly – A critical appraisal of the current scenario, Method to fulfill the above human aspirations: understanding and living in harmony at various levels.

(Practice sessions are to be included to discuss natural acceptance in human being as the innate acceptance for living with responsibility (living in relationship, harmony and co-existence) rather than as arbitrariness in choice based on liking-disliking).

UNIT II

Understanding Harmony in the Human Being – Harmony in Myself

Part-1: Understanding human being as a co-existence of the sentient 'I' and the material 'Body'. Understanding the needs of Self ('I') and 'Body' – happiness and physical facility, Understanding the Body as an instrument of 'I' (I being the doer, seer and enjoyer).

Part-2: Understanding the characteristics and activities of 'I' and harmony in 'I'. Understanding the harmony of I with the Body: Sanyam and Health; correct appraisal of Physical needs, meaning of Prosperity in detail, Programs to ensure Sanyam and Health.

(Practice sessions are to be included to discuss the role others have played in making material goods available to me. Identifying from one's own life. Differentiate between prosperity and accumulation. Discuss program for ensuring health vs. dealing with disease).

UNIT III

Understanding Harmony in the Family and Society – Harmony in Human -Human Relationship

Part-1: Understanding values in human-human relationship; meaning of Justice (nine universal values in relationships) and program for its fulfillment to ensure mutual happiness; Trust and Respect as the foundational values of relationship, Understanding the meaning of Trust; Difference between intention and competence, Understanding the meaning of Respect, Difference between respect and differentiation; the other salient values in relationship.

Part-2: Understanding the harmony in the society (society being an extension of family); Resolution, Prosperity, fearlessness (trust) and co-existence as comprehensive Human Goals, Visualizing a universal harmonious order in society–Undivided Society, Universal Order–from family to world family.

(Practice sessions are to be included to reflect on relationships in family, hostel and institute as extended family, real life examples, teacher-student relationship, goal of education, etc. Gratitude as a universal value in relationships. Discuss with scenarios. Elicit examples from students' lives).

UNIT IV

Part-1: Understanding Harmony in Nature & Existence – Whole existence as Coexistence Understanding the harmony in the Nature, Interconnectedness and mutual fulfillment among the four orders of Nature – recyclability and self-regulation
in nature, Understanding Existence as Co-existence of mutually interacting units in all-pervasive space, Holistic perception of harmony at all levels of existence.

Part-2: Implications of the above Holistic Understanding of Harmony on Professional Ethics Natural acceptance of human values, Definitiveness of ethical human conduct, Basis for humanistic education, humanistic constitution and humanistic universal order, Competence in professional ethics: a) ability to utilize the professional competence for augmenting universal human order, b) ability to identify the scope and characteristics of people-friendly and eco-friendly production systems, c) ability to identify and develop appropriate technologies and management patterns for above production systems, Case studies of typical holistic technologies, management models and production systems, Strategy for transition from the present state to Universal Human Order: a) at the level of individual: as socially and ecologically responsible engineers, technologists and managers, b) at the level of society: as mutually enriching institutions and organizations.

(Part-1: Practice sessions are to be included to discuss human being as cause of imbalance in nature (film "Home" can be used), pollution, depletion of resources and role of technology, etc.

Part-2: Practice exercises and case studies are to be taken up in practice (tutorial) sessions eg., to discuss the conduct as an engineer or scientist, etc.)

COURSE CONTENT

UNIT I

Operating-System Structures: Operating-System Services, User and Operating-System Interface, System Calls: Example, Application Programming Interface, Types of System Calls, System Services

Processes: Process Concept: The Process, Process State, Process Control Block, Threads, Process Scheduling: Scheduling Queues, CPU Scheduling, Context Switch, Operations on Processes: Process Creation, Process Termination, Interprocess Communication, IPC in Shared-Memory Systems, IPC in Message-Passing Systems: Naming, Synchronization, Buffering.

UNIT II

CPU Scheduling:Basic Concepts: CPU-I/O Burst Cycle, CPU Scheduler, Preemptive & Nonpreemptive Scheduling, Dispatcher, Scheduling Criteria, Scheduling Algorithms: FCFS, SJF, RR, Priority, Multilevel Queue, Multilevel Feedback Queue Scheduling, Multiple-Processor Scheduling: Approaches, Multicore Processors, Load Balancing, Processor Affinity, Heterogeneous Multiprocessing, Real-Time CPU Scheduling: Minimizing Latency, Priority-Based, Rate-Monotonic, Earliest-Deadline-First, Proportional Share Scheduling.

Process Synchronization: Background, The Critical-Section Problem, Peterson's Solution, Hardware Support for Synchronization, Mutex Locks, Semaphores: Semaphore usage, Semaphore Implementation, Monitors: Usage, Implementing using Semaphores, Resuming a Process, Liveness: Deadlock, Priority Inversion, Classic Problems of Synchronization: The Bounded-Buffer Problem, The Readers-Writers Problem, The Dining-Philosophers Problem

UNIT III

Deadlocks:System Model, Deadlock in Multithreaded Applications: Livelock, Deadlock Characterization: Necessary conditions, Resource-Allocation Graph, Methods for Handling Deadlocks, Deadlock Prevention: Mutual Exclusion, Hold and Wait, No Preemption, Circular Wait, Deadlock Avoidance: Safe State, Resource-Allocation-Graph Algorithm, Bankers Algorithm, Deadlock Detection: Single Instance of Each Resource type, Several Instances, Detection Algorithm Usage, Recovery from Deadlock: Process and Thread Termination, Resource Preemption.

Main Memory: Background: Basic Hardware, Address Binding, Logical Vs Physical Address Space, Dynamic Loading, Dynamic Linking & Shared Libraries, Contiguous Memory Allocation: Memory Protection, Memory Allocation, Fragmentation, Paging: Basic Method, Hardware Support, Protection, Shared Pages, Structure of the Page Table: Hierarchical, Hashed Page Tables, Inverted Page Tables, Swapping: Standard Swapping, Swapping with Paging, Swapping on Mobile Systems.

UNIT IV

Virtual Memory: Background, Demand Paging: Basic Concepts, Free-Frame List, Performance, Copy-on-Write, Page Replacement: Basic Page Replacement, FIFO, Optimal, LRU, LRU Approximation, Counting Based, Page Buffering, Allocation of Frames: Minimum Number of Frames, Allocation Algorithms, Global vs Local Allocation, Non Uniform Memory Access, Thrashing: Cause of Thrashing, Working-Set Model, Page-Faulty Frequency, Memory Compression.

Mass-Storage Structure: HDD Scheduling: FCFS, SCAN, C-SCAN Scheduling. *File -System Implementation:* Directory Implementation: Linear List, Hash Table, Allocation Methods: Contiguous, Linked, Indexed Allocation, Free-Space Management: Bit Vector, Linked List, Grouping, Counting, Space Maps, Efficiency and Performance.

TEXTBOOKS

20AI&DS4351 DESIGN AND ANALYSIS OF ALGORITHMS LABORATORY

Course Category	Program Core	Credits	1
Course Type	Laboratory	L-T-P	0-0-2
Prerequisites	20AI&DS3305 Data Structures and Algorithms	Continuous Eval Semester End Eval Total Marks	30 70 100

COURSE OUTCOMES

- 1. Implement efficient binary trees, M-way search trees, graph traversal and shortest path algorithms
- 2. Use divide and conquer, and greedy methods for implementing solutions for problems.
- 3. Implement solutions for problems using dynamic programming and backtracking.
- 4. Apply Branch and Bound techniques to write programs for different problems.

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

- Task 1: Design a static web page with HTML5 basic elements
- Task 2: Design a static web page with HTML forms.
- Task 3: Create a DTD and XML Schema.
- Task 4: Deploy a basic servlet.
- Task 5: Deploy a servlet for link statistics of browser.
- Task 6: Deploy a servlet for uploading the file.
- **Task 7:** Design a JSP page to keep a page counter of how many times it has been visited.
- $Task\ 8:$ Design a JSP page with the usage of JavaBeans, getProperty and setProperty actions.

Task 9: Design a JSP page using a Tag Handler and TLD

- **Task 10:** Write some simple code to accomplish two things: test the Hibernate setup and also look at a basic example of how to use Hibernate.
- Task 11: Developing TimesheetManager using Hibernate
- Task 12: Develop a User Interface using Spring.

TEXTBOOKS

- 1. Jim Keogh, "J2EE: The Complete Reference", McGraw Hill, 2002. (Unit I)
- 2. Jayson, Falkner, and Jones Kevin. "Servlets and Java Server Pages: The J2EE Technology Web Tier.", Addison-Wesley, 2004. (Unit II, III)
- 3. Hemrajani, Anil. Agile Java Development with Spring, Hibernate and Eclipse. Sams publishing, 2006. (Unit IV)

20AI&ML4353 COMPUTER NETWORKS LABORATORY

Course Category	Program Core	Credits	1
Course Type	Laboratory	L-T-P	0-0-2
Prerequisites	20AI&DS3305 Data Structures and Algorithms	Continuous Eval Semester End Eval Total Marks	$\begin{array}{c} 30\\70\\100\end{array}$

COURSE OUTCOMES

- 1. Investigate OSI and TCP reference models in action
- 2. Develop java programs for CRC and RSA algorithms
- 3. Demonstrate routing algorithms, congestion control & QoS techniques used at network layer
- 4. Implement different protocols used at transport layer and Application layer.

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

4	2	1	3						3				1		4	1.2.1, 1.7.1, 2.5.2,	
4		1	5						5						4	5.5.2	

COURSE CONTENT

- **Task 1:** Installation of Packet Tracer & environment Network Representation (PT 1.5.5).
- **Task 2:** Investigate OSI and TCP reference models in action Part 1 - Examine HTTP Web Traffic (PT 3.5.5)
- Part 2 Display Elements of the TCP/IP Protocol Suite.
- Task 3: Basic switch and end device configuration Configure Initial Switch Settings (PT 2.5.5) Basic Switch and End Device Configuration (PT 2.9.1).

Task 4: Physical Layer

- Connect a Wired and Wireless LAN (PT 4.6.5)
- Connect the Physical Layer (PT 4.7.2)

Task 5: Basic Router Configuration
Configure Initial Router Settings (PT 10.1.4)
Connect a Router to a LAN $(PT 10.3.4)$
Troubleshoot Default Gateway Issues $(10.3.5)$
Basic Device Configuration (PT 10.4.3).
Task 6: Data Link Layer Protocols
Identify MAC and IP Addresses $(PT 9.1.3)$
Examine the ARP Table (PT $9.2.9$).
Task 7: IPv4 Addressing
Subnet an IPv4 Network (PT 11.5.5)
Subnetting Scenario (PT 11.7.5)
Task 8: VLSM
VLSM Design and Implementation Practice $(PT 11.9.3)$
Design and Implement a VLSM Addressing Scheme (PT 11.10.1).
Task 9: IPv6 Addressing
Configure IPv6 Addressing (PT 12.6.6)
Implement a subnetted IPv6 Addressing Scheme (PT $12.9.1$)
Task 10: ICMP for network testing
Verify IPv4 and IPv6 Addressing (PT $13.2.6$)
Use Ping and Traceroute to Test Network Connectivity $(PT 13.2.7)$
Use ICMP to Test and Correct Network Connectivity (PT $13.3.1$)
Task 11: Transport Layer
TCP and UDP Communications $(PT 14.8.1)$
Task 12: Device Security
Configure Secure Passwords and SSH (PT 16.4.6)
Secure Network Devices (PT 16.5.1)
Installing Wireshark and Using Wireshark to View Network Traffic.

Supplementary Coding Tasks

- 1. Compute Cyclic Redundancy Check (CRC) for a given data frame using the three CRC polynomials CRC 12, CRC 16 and CRC CCITT.
- 2. Implement Dijkstra's algorithm to compute the Shortest path for a given graph.
- 3. Obtain Routing table at each node using Distance Vector Routing (DVR) algorithm for given subnet.

TEXTBOOKS

20TP4106 ENGLISH FOR PROFESSIONALS

Course Category	Soft Skills - 2	Credits	1
Course Type	Learning by Doing	L-T-P	0-0-2
Prerequisites	_	Continuous Eval Semester End Eval Total Marks	$\begin{array}{c} 100\\00\\100 \end{array}$

COURSE OUTCOMES

- 1. Present themselves effectively in the professional world
- 2. Introduce themselves as well as others appropriately.
- 3. Use vocabulary to form sentences and narrate stories by using creative thinking skills
- 4. Involve in practical activity oriented sessions.
- 5. Learn about various expressions to be used in different situations..

COURSE CONTENT

UNIT I

• Beginners, Functional, Situational Conversations: Introduction, Importance of spoken English in the placements and Group Discussion Beginners Conversation, Self Introduction Introducing Self, Introducing each other in a team (Pair Activity) Functional Conversation, Seeking Permission from Seniors Teachers and other superiors (Team Activity), Asking Direction-Direction from stranger or from Helpline, Making Requests, Requests for borrowing books, applications, or any other help from office staff in college or outside.

• Just a minute: Give a topic and ask the student to talk impromptu, To present the topic in a structured manner

UNIT II

- Structuring and forming sentences: Structure of mother tongue and pit falls in translation to English, Formation of sentences in English
- Errors in Usage: Difficulty in right usage of words, Difficulty in Pronunciation-Phonetic differences in mother tongue and English –areas to improve, Idioms and Phrase –Frequently used Idiom and Phrases which help to enhance the quality of presentation and make the presentation meaningful, Meaning of frequently used Idioms and Phrases

UNIT III

• Introduction to different ways of speaking: Elocution, Debate and Extempore, Principles of Elocution and its challenges practice in session, Principles of Debates and its challenges – practice session, Principles of Extempore - its pitfallspractice sessions.

UNIT IV

- Etiquette: Need of Etiquette in Social arena, Dining Etiquette, Social Etiquette in conversation -formal and informal gathering, Book a table etc.
- Versant Test: Mode of versant Test, Aim of the test and various methods it follows, Practice session.

METHODOLOGY

- Audio—Visuals / Hand Outs (Compiled/Created by Training Division, T&P Cell, VR Siddhartha Engineering College), Board & Chalk and Interactive Sessions.
 TEXTBOOKS
- 1. KamaleshSadanand, "A Spoken English", VOL 12; Orient BlackSwan, Second Edition,2014.
- 2. "Communicative English"; Pearson; 2010

20AI&DS4607 INDUSTRY STANDARD CODING PRACTICE-I

Course Category	Skill Oriented Course - 1	Credits	2
Course Type	Laboratory	L-T-P	1-0-2
Prerequisites	20AI&DS3305 Data Structures and Algorithms	Continuous Eval Semester End Eval Total Marks	$30 \\ 70 \\ 100$

COURSE OUTCOMES

- 1. Understand test and development aspects of programming by solving problems at Industry standards.
- 2. Apply domain skills and mathematical knowledge to solve any given problem.
- 3. Apply methods to optimize solutions for any given problem.
- 4. Apply elementary data structures to solve problems with test driven development.

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

COURSE CONTENT

UNIT I

Problem solving through Competitive Coding, Problem solving using control structures, Numeric series and patterns, Code Complexity analysis, Linear/ Logarithmic/ Super linear/ Polynomial/ Exponential/ Factorial Algorithms, Problem solving on rotations of data, Problem solving on Order statistic problems, Problem Solving Examples Problem solving on matrix data, Memory manipulation techniques using pointers. Memory Arithmetic, Problem solving implementing pointer to an array, Memory Layout, overcoming the segmentation faults, Runtime memory allocation, Coding comparisons of Linear list data structure and Pointers, examples and Practice problems.

UNIT II

Problem solving on string data, Problem solving on String manipulations, coding problems using string handling functions, Problem solving on Multi-String Problems, Problem Solving for long strings, Examples, Practice problems. Problem solving using modular programming, Inter module communications, scopes of data in the code, Problem solving approaches using recursions, Evaluation of Recursive algorithms, Significance of mathematical Recurrence Relations, Evaluation of recurrence relations, Time Analysis, Examples, Practice problems.

UNIT III

Problem solving on operational and traversal logics on linked lists, Problem solving to compare linked lists, detection of a cycle/merge point, Merging sorted linked lists, coding problems on circular linked lists/Double linked lists, Examples, Practice problems. Problem Solving Problem solving through Linked list coding, traversals, Problem solving to compare linked lists, detection of a cycle/merge point, Merging sorted linked lists, Circular linked list formation, Double linked list formation, Examples, Practice problems.

UNIT IV

Problem solving through testing, implementing various testing approaches: Test strategy, Test development, Test execution, Bug fixing, Examples, Practice problems, Problem solving Methods and techniques. Understanding the problem as math abstract, formation of the logic, Identifying the corner cases, Examples, Practice problems, Version control systems, Git repositories and working trees, adding new version of the files to a Git repository, Examples, practice problems.

Course Category	Mandatory Course	Credits	-
Course Type	Theory	L-T-P	2-0-0
Prerequisites	_	Continuous Eval Semester End Eval Total Marks	100 00 100

COURSE OUTCOMES

- 1. Know the fundamental law of the land.
- 2. Understand how fundamental rights are protected.
- 3. Perceive the structure and formation of the Indian Government System.
- 4. Explain when and how an emergency can be imposed and what are the consequences.

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

CO							PO						PS	SO	ΓL	DOI
CO	1	2	3	4	5	6	7	8	9	10	11	12	1	2	B	1 01
1										2					2	
2															2	
3							1								2	
4							2					3			2	

COURSE CONTENT

UNIT I

Introduction to Constitution of India: Meaning of the Constitution Law and Constitutionalism, Historical perspective of constitution of India, Salient features of Constitution of India.

UNIT II

Fundamental Rights: Scheme of the fundamental rights, scheme of the fundamental right to equality, scheme of the fundamental right to certain freedoms under Article 19, scope of the right of life and personal liberty under Article 21, writs jurisdiction.

UNIT III

Nature of the Indian Constitution: Federal structure and distribution of legislative and financial powers between the Union and states.

Parliamentary form of Government in India: The Constitution powers and

status of the President of India, Amendment of the Constitutional powers and Procedure, Historical Perspectives of the constitutional amendments in India. *Local Self Government:* Constitutional Scheme in India.

UNIT IV

Emergency Provisions: National Emergency, President rule, Financial Emergency.

TEXTBOOKS

1. Dr. J.N. Pandey, Constitutional Law of India published by Central law Agency, Allahabad, Edition 2018

VR20

SEMESTER V

Artificial Intelligence

Course Category	Program Core	Credits	3
Course Type	Theory	L-T-P	3-0-0
Prerequisites	20AI&DS4302 Design and Analysis of Algorithms	Continuous Eval Semester End Eval Total Marks	30 70 100

COURSE OUTCOMES

- 1. Understand the techniques and applications of Artificial Intelligence.
- 2. Apply rules to represent knowledge of real world problems
- 3. Apply filler structures for different sentences and know the concepts of Natural Language Processing.
- 4. Analyze the key aspects of Expert Systems and apply the concepts of Connectionist Models for complex problems

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

4			5												4	2.7.1, 3.5.1

COURSE CONTENT

UNIT I

Problems, Problem Spaces And Search: Defining the Problem as a State space Search, Production Systems, Problem Characteristics, Production system characteristics.

Heuristic Search Techniques: Generate-and-test, Hill Climbing, Best-First Search, Problem Reduction, Constraint Satisfaction, Means-Ends Analysis.

UNIT II

Knowledge Representation Issues: Representations and Mappings, Approaches to Knowledge Representation, Issues in Knowledge Representation.

Representing Knowledge Using Rules: Procedural versus Declarative Knowledge, Logic Programming, Forward versus Backward Reasoning, Matching.

UNIT III

Weak Slot-and-Fillers Structures: Semantic Nets, Frames Strong Slot-and- Fillers Structures: Conceptual Dependency, Scripts. Natural Language Processing: Introduction, syntactic processing, Semantic analysis, Discourse and pragmatic processing.

UNIT IV

Connectionist Models: Introduction: Hopfield Networks, Learning in Neural Networks, Applications of Neural Networks.

Expert Systems: Representing and Using Domain Knowledge, Expert System Shells, Explanation, Knowledge Acquisition.

COURSE CONTENT

UNIT I

*Introduction to Machine Learning:*Introduction. Different types of learning, Examples of Machine Learning Applications

Supervised Learning: Learning a Class from Examples, Probably Approximately Correct Learning, Learning multiple classes, Model selection and generalization

Regression: Linear regression, Multiple Linear regression, Logistic Regression **Dimensionality reduction :** Feature Selection, subset selection, Principal Component Analysis, Linear Discriminant Analysis

UNIT II

Decision tree learning: Introduction, Decision tree representation, appropriate problems for decision tree learning, the basic decision tree algorithm, issues in decision tree learning

Artificial Neural Networks Neural network representation, Appropriate problems for neural network learning, Perceptrons: Gradient descent and the Delta rule, Multilayer networks and the back propagation algorithm

Basics of Sampling theory: Error Estimation and Estimating Binomial Proportions, The Binomial Distribution, Mean and Variance, Estimators, Bias, and Variance, Confidence Intervals

UNIT III

Bayesian learning: Introduction , Bayes Theorem, Naïve Bayes Classifier, Bayes optimal classifier, Bayesian Belief networks, Conditional independence, Learning Bayesian belief networks

Parametric Methods: Maximum Likelihood Estimation

Non paramteric methods: K nearest neighbor

Support Vector Machine: Introduction, Optimal Separating Hyperplane, The Nonseparable Case: Soft Margin Hyperplane, Defining Kernels

UNIT IV

Ensembles: Introduction, Bagging and Boosting, Random forest

Clustering: Introduction, K-means clustering, Expectation maximization algorithm, Hierarchical clustering, Density based clustering: DBSCAN, Choosing the Number of Clusters

Algorithm evaluation methods: Classification Accuracy, Confusion Matrix

COURSE CONTENT

UNIT I

Forms of Business Organization: Salient Features of Sole Proprietorship, Partnership, Joint Stock Company, Co-operative Society and Public Sector.

Management: Introduction to Management, Functions of Management, Principles of Scientific Management, Modern Principles of Management.

UNIT II

Introduction to Economics: Introduction to Basic Economic Concepts, Utility Analysis: Marginal Utility and Total Utility, Law of Diminishing Marginal Utility, Law of Equi Marginal Utility.

Demand Analysis: Theory of Demand: Demand Function, Factors Influencing Demand, Demand Schedule and Demand Curve, Shift in Demand, Elasticity of Demand: Elastic and Inelastic Demand, Types of Elasticity.

Supply Analysis: Supply Schedule and Supply Curve, Factors Influencing Supply, Supply Function.

UNIT III

Human Resource Management: Meaning and difference between Personnel Management and Human Resource Management, Functions of Human Resource Management.

Marketing Management: Concept of Selling And Marketing – Differences, Functions of Marketing, Product Life Cycle, Concept of Advertising, Sales Promotion, Types of Distribution Channels, Marketing Research, Break-Even Analysis.

UNIT IV

Financial Management: Functions of Financial Management, Time value of money with cash flow diagrams, Concept of Simple and Compound Interest.

Depreciation: Causes of depreciation, Factors influencing depreciation, common methods of Depreciation: Straight Line Method, Declining Balance Method, Sum of Year's Digits Method – Problems.

Economic Alternatives: Methods of Evaluating Alternatives under Present worth method, Future worth method, Annual Equivalent method - Problems.

COURSE CONTENT

UNIT I

Monitoring + AI = Rx for Personal Health: Prescription (Rx) for Personal Health, Three Realms Influencing Healthcare, Ambient Computing and Healthcare, Continuous Monitoring Using AI. Continuous Monitoring, Beeps, Chimes, Dings, and Dongs, Health Continuum, Application of IoT and AI to Medical Care, Health Determinants and Big Data.

UNIT II

Digital Transformation and AI: Digital Transformation of Healthcare: -Path A: Creating Digital Operations and Processes, Path B: Building New Capabilities, Path C: Transforming Business Processes, Paths to the Digital Transformation of Healthcare.

Digital Healthcare AI Applied to Digital Healthcare, AI, Digitization, and Big Tech.

Preventive and Chronic Disease ManagementAI and Prevention, AI and Chronic Disease, AI and Mental Health.AI and Telemedicine **Medication Management and AI**Medication Adherence, Digital Medication, AI and Digitization Applied to Administrative Tasks

UNIT III

Emerging Applications in Healthcare Using AI: Improving Human Health, Improving Human Lives, Making Technology Work for Healthcare, Ambient Intelligence, From a Patient's Perspective, From a Doctor's Perspective, From a Hospital System's Perspective ,From an Insurer's Perspective, Emerging Applications and Services, Coordination of Care Platform, Disease State Management Platform, Human to Machine Experience Services ,Customer Journey Platform .Clinician Decision Support Tools, Ambient Intelligence Environments, Digital Twin Platform, Real-Time Healthcare.

UNIT IV

AI at Scale for Healthcare Organizations: Achieving AI at scale, Transforming Healthcare The Chasm, Invisible Engines—Healthcare Platforms, Inpatient Care. The Road to a Healthcare Platform .Ecosystems, Application Programming Interfaces (APIs)

BUSINESS INTELLIGENCE AND DATA VISUALIZATION

Course Category	Program Elective I	Credits	3
Course Type	Theory	L-T-P	3-0-0
Prerequisites	20AI&DS3303 Database Systems	Continuous Eval Semester End Eval Total Marks	$30 \\ 70 \\ 100$

COURSE OUTCOMES

- 1. Understand the need and value of business intelligence
- 2. Understand business intelligence environment and models
- 3. Apply data visualization anatomy for data representation and presentation
- 4. Analyse the data visualization methods.

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

COURSE CONTENT

UNIT I

Business Intelligence and Information Exploitation: Introduction to Business Intelligence ,The Information Asset ,Exploiting Information ,Business Intelligence and Program Success , Actionable Knowledge.

The Value of Business Intelligence: The Information Asset and Data Valuation, Actionable Knowledge-Return on Investment, Business Intelligence Applications, The Intelligence Dashboard Business Intelligence Adds Value .

UNIT II

The Business Intelligence Environment: The Business Case, The Business Intelligence Process, System Infrastructure, Information Access, Delivery, and Analysis, Services. **Business Models and Information Flow:** Information Processing and Information Flow, The Information Flow Model, Usage in Practice ,Modeling Frameworks.

UNIT III

The Context of Data Visualization : Visualization as a discovery tool, The bedrock of visualization knowledge, Defining data visualization, Visualization skills for the masses, The data visualization methodology. Conceiving and Reasoning Visualization Design Options: Data visualization design is all about choices, The visualization anatomy – data representation, The visualization anatomy – data presentation

UNIT IV

Taxonomy of Data Visualization Methods: Data visualization methods, Choosing the appropriate chart type, Comparing categorires, Dot plot ,Bar chart, Floating bar,Pixelated bar chart,Histogram, SlopeGraph, Radial chart,Glyph chart,Assessing hierarchies and part-to-whole relationships,Pie chart,Stacked bar chart,Square pie,Tree map,Circle packing diagram,Bubble hierarchy,Tree hierarchy,Showing changes over time,Line chart,Sparklines,Area chart,Plotting Connections and Relationships, Scatterplot, Bubble plot, Heat map, Case studies- coca-cola: shaping the essence of analytics, linkedin: empowering of the sales team.

20AI&DS5404C CRYPTOGRAPHY & NETWORK SECURITY

Course Category	Program Elective I	Credits	3
Course Type	Theory	L-T-P	3-0-0
Prerequisites	20AI&DS4304 - Computer Networks	Continuous Eval Semester End Eval Total Marks	$30 \\ 70 \\ 100$

COURSE OUTCOMES

- 1. Understand fundamental principles of security and symmetric encryption
- 2. Apply asymmetric encryption techniques and Cryptographic Hash functions
- 3. Apply Authentication applications and Transport Layer Security mechanisms
- 4. Understand the protocols for network security and methods to safeguard the network

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

4			0		5									5		3.6.2, 5.4.2	

COURSE CONTENT

UNIT I

Overview: Security attacks, Services, A model for network security; Basics of Cryptography, Cryptanalysis. Symmetric cipher model.

Classical encryption techniques: Substitution Techniques: Caesar Cipher, Mono alphabet Cipher, Playfair Cipher Transposition Techniques: Rail Fence, Row & Column Transposition.

Block Cipher: Stream and Block Cipher, DES, Strength of DES, AES.

Block cipher Operations: Multiple Encryption, ECM, CBC, CFM, OFM, CTR.

UNIT II

Number Theory: Prime Numbers, Fermat's theorem, Euler's Theorem

Cloud Applications: Principles of Public Key Crypto System, RSA algorithm, Diffie-Hellman Key Exchange, Problems, Elliptic Curve Cryptography

Cryptographic Hash Functions: Applications-Message Authentication, Digital signatures, SHA-512 Logic, Round Functions.

UNIT III

Key Management and Distribution: Distribution of Public Keys, X.509 Certificates,

 ${\it User \ Authentication:}$ Kerberos: Motivation, Kerberos Version 4, Kerberos Version 5

Transport Level Security: Web Security Threats, Web Traffic Security Approaches. **Transport Layer Security:** TLS - TLS Architecture, Record Protocol, Change Cipher Spec Protocol, Alert Protocol, Handshake Protocol, Cryptographic Computations

HTTPS Connection Initiation, Connection Closure.

UNIT IV

Email Security: S/MIME - Operational Description, S/MIME Message Content Types, Approved Cryptographic Algorithms, PGP

IP Security: Overview: Applications, Benefits, IPsec Documents, IPsec Services, Transport and Tunnel Modes, Encapsulating Security Payload - ESP Format, Encryption and Authentication Algorithms, Padding, Anti-Replay Service, Transport and Tunnel Modes

Malicious Software: Types – Viruses, Backdoor, Logic Bomb, Trojan Horses **Email Security:** The Need for Firewalls, Characteristics, Types of Firewalls -Packet Filtering Firewall, Stateful Inspection Firewalls, Application-Level, Gateway Circuit-Level Gateway, Firewall Basing- Bastion Host, Host-Based Firewalls, Personal Firewall..

20AI&DS5404D MICROPROCESSORS & MICROCONTROLLERS

Course Category	Program Elective I	Credits	3
Course Type	Theory	L-T-P	3-0-0
Prerequisites	20ES3102 Digital Logic & Computer Design	Continuous Eval Semester End Eval Total Marks	$30 \\ 70 \\ 100$

COURSE OUTCOMES

- 1. Understand the fundamental concepts, internal Architecture and interrupts of 8086 P.
- 2. Apply 8086 Microprocessor Programming Knowledge to solve the problems.
- 3. Apply Interfacing on different peripherals with Microprocessor.
- 4. Understand the internal architecture & programming of 8051 microcontroller.

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

CO		PO													L	POI

3	2	3	3											2	3	1.7.1, 2.7.1, 3.8.3	
4	2	2												2	2	1.7.1, 2.7.1	

COURSE CONTENT

UNIT I

The 8086 Microprocessor: Overview of microcomputer structure & operation, overview of 8086 microprocessor family, features of advanced Pentium processors, 8086 internal architecture, Machine language Vs assembly language, 8086 addressing modes. 8086 pin diagram, 8086 minimum mode and maximum mode

UNIT II

8086 Instruction Set & Programming: Data transfer instructions, arithmetic instructions, bit manipulation instructions, string instructions, program execution transfer instructions, and processor control instructions, Assembler directives. Standard 8086 assembly language program structure, Assembly language program development tools, writing simple programs in 8086 assembly language, Writing and using procedures and assembler macros
UNIT III

Interrupts: 8086 interrupts and interrupt responses, 8259A priority interrupt controller **Interfacing With 8086 Microprocessor** Programmable parallel ports and hand shake input/output, the programmable peripheral interface 8255A: modes of operation and initialization, Basics of D/A and A/D converters. Interfacing of DAC and ADC to 8086 microprocessor.

UNIT IV

The 8051 Microcontroller: 8051 micro controller hardware, inputs/ outputs pins, ports and circuits, counters and timers, serial data input/output, interrupts. Programming The 8051: Addressing Modes, External data moves, code memory read only data moves, PUSH and POP op codes, data exchanges, byte level and bit level logical operations rotate and swap operations, arithmetic operations jumps, calls & subroutines Interrupts & returns

COURSE CONTENT

UNIT I

Introduction to Data Science: What Is Data Science, Example: Search Advertising, A Bit of Data Science History, Becoming a Data Scientist, Building a Data Science Team, The Data Science Project Life Cycle. Use Cases for Data Science: Big Data—A Driver of Change, Business Use Cases. Hadoop and Data Science: What Is Hadoop, Hadoop's Evolution, Hadoop Tools for Data Science, Why Hadoop Is Useful to Data Scientists.

UNIT II

Getting Data into Hadoop: Hadoop as a Data Lake, The Hadoop Distributed File System (HDFS), Direct File Transfer to Hadoop HDFS, Importing Data from Files into Hive Tables, Importing Data into Hive Tables Using Spark, Using Apache Sqoop to Acquire Relational Data, Using Apache Flume to Acquire Data Streams.

Data Munging with Hadoop: Why Hadoop for Data Munging, Data Quality, The Feature Matrix.

UNIT III

Exploring and Visualizing Data: Why Visualize Data, Creating Visualizations, Using Visualization for Data Science, Popular Visualization Tools, Visualizing Big Data with Hadoop. *Machine Learning with Hadoop:* Overview of Machine Learning, Terminology, Task Types in Machine Learning, Big Data and Machine Learning, Tools for Machine Learning, The Future of Machine Learning and Artificial Intelligence

UNIT IV

Predictive Modeling: Overview of Predictive Modeling, Classification Versus Regression, Evaluating Predictive Models, Supervised Learning Algorithms, Building Big Data Predictive Model Solutions. **Anomaly Detection with Hadoop:** Uses of Anomaly Detection, Types of Anomalies in Data, Approaches to Anomaly Detection, Tuning Anomaly Detection Systems, Building a Big Data Anomaly Detection Solution with Hadoop.

4																2.8.1	

COURSE CONTENT

UNIT I

Fundaments of Information Retrieval(IR), ModelsandIndex construction and compression: Boolean retrieval, The term vocabulary and postings lists, Dictionaries and tolerant retrieval, Index construction and compression, Scoring, term weighting, and the vector space model, Computing scores in a complete search system, Introduction to Relevance feedback and query expansion.

Probabilistic information retrieval: Review of basic probability theory, The probability ranking principle, The binary independence model.

Language models for information retrieval: Language modeling versus other approaches in information retrieval

UNIT II: Text Classification

Text classification and Naive Bayes: The text classification problem, Naive Bayes text classification, Properties of Naive Bayes, The Bernoulli model, Feature selection, Evaluation of text classification.

Vector space classification: Document representations, Measures of relatedness in vector spaces, Rocchio classification, k nearest neighbour, Linear versus nonlinear classifiers, Classification with more than two classes. Support vector machines (SVM) and machine learning on documents, Evaluation in information retrieval.

UNIT III: Text Clustering, Matrix decompositions and latent semantic indexing

Flat clustering: Clustering in information retrieval, Problem statement, Evaluation of clustering, K-means, Model-based clustering.

Hierarchical clustering: Hierarchical agglomerative clustering, Single-link and complete-link clustering, Group-average agglomerative clustering, Centroid clustering, Optimality of hierarchical agglomerative clustering, Divisive clustering, Cluster labelling.

Matrix decompositions and latent semantic indexing: Term–document matrices and singular value decompositions, Low-rank approximations, Latent semantic indexing.

UNIT IV: Web Information Retrieval

Web search basics: Web search basics, Web characteristics, Index size and estimation, Near duplicates and shingling **Web Crawling and Indexes:** Crawling, Distributing Indexes, Connectivity servers. **Link Analysis:** Web as a graph, PageRank, Hubs and authorities.

COURSE CONTENT

UNIT I

Introduction to Pytorch basics, installing Pytorch, creating tensors in pytorch, manipulating dat a type and shape of a tensor, applying mathematical operations to tensors, split, stack, and concatenate tensors, Building input pipelines in pytorch, creating a pytorch loader from existing loaders, combining tensors into a joint dataset, shuffle,batch and repeat

UNIT II

Machine learning classifiers using Scikit- Learn: Choosing a classification algorithm, first steps with Scikit-learn- training a perceptron, modelling class abilities via logistic regression, modelling class probabilities via logistic regression, logistic regression

and conditional probabilities, learning the model weights via the logistic loss function, training a logistic regression model with Scikit-learn , tackling over fitting via regularization

UNIT III

Introduction to tensorflow: basic of tensorflow, tensorflow implementation, tensorflow pipeline, tensorboard visualization Regression using Tensorflow: Introduction, training linear regression model, training linear regression with tensorflow, data import using pandas, data import using numpy, data import using tensorflow

UNIT IV

Building an NN model in pytorch , the pytorch neural network model, building a linear regression model , model training via torch modules, Building a multilayer perceptron for classifying the dataset, evaluating the model , aving the model, and reloading the model

TEXTBOOKS

4	1	2											1		3	$\begin{array}{c} 1.2.1, \ 1.6.1, \ 2.6.1, \\ 2.7.1 \end{array}$

COURSE CONTENT

UNIT I

INTRODUCTION TO VIRTUAL REALITY (VR): Defining Virtual Reality, Five key elements of the virtual reality experience, Virtual Reality, Telepresence, Augmented Reality and Cyberspace, History of Virtual Reality. **VR-THE MEDIUM:** Communicating through a Medium, Communication: Conveyance of Ideas, Common Issues of Human Communication Media.

UNIT II

THE HUMAN IN THE LOOP: The Human Perceptual System: Sensation-The Physiological Side of Perception, Visual Perception, Aural Perception, Haptic Perception, Vestibular Perception, Olfactory Perception, Gustation Perception, Cross-Sensory Effects and Virtual Reality. **PRESENCE AND EMBODIMENT:** The

Concept of Presence, The Determinants and Responses of Presence, Measuring Presence, Embodiment.

UNIT III

Interfacing the Participant(s) with the Virtual World (INPUT): Input Technologies-Input Classifications, Position-Tracking Technologies, Using Inputs within a Virtual Reality System-Position Tracking the Body, Physical Input Devices, Body Posture and Gesture Recognition, Speech Recognition (Audio Input). INTERFAC-ING THE VIRTUAL WORLD WITH THE PARTICIPANT(S)(OUTPUT): Visual Displays-Nonocclusive Head-Based Displays, Smartphone-Virtual Reality Head-Based Displays, Handheld Virtual Reality, Summary of Visual Display Paradigms; Aural Displays-Properties of Aural Displays, Aural Display Paradigms; Haptic Displays-Properties of Haptic Displays, Haptic Display Paradigms, Tactile Haptic Displays, End-Effector Displays.

UNIT IV

PRESENTING THE VIRTUAL WORLD: Representation of the Virtual World-Verisimilitude, Human Perception, choosing a Mapping, Quantitative and Qualitative Representations; Visual Representation in VR, Aural Representation in VR, Haptic Representation in VR; Rendering Systems- Visual Rendering Systems, Sonic Rendering Systems, Haptic Rendering Systems.

THE VIRTUAL REALITY EXPERIENCE: Immersion, providing the Context, Physical/Sensory Immersion, Mental Immersion, the virtual World: Substance of the Virtual World, Object Modelling and World Layout.

COURSE CONTENT

UNIT I

Introduction: Importance of user Interface – definition, importance of good design, benefits of good design, a brief history of screen design. **The Graphical User Interface:** Popularity of graphics, the concept of direct manipulation, graphical system, characteristics. **Web User Interface:** Popularity, principles and characteristics.

UNIT II

Design process: Understanding how people interact with computers, Important Human Characteristics in Design, Human Considerations in Design, Human interaction speeds. **Screen designing:** Interface design goals, screen meaning and purpose,

organizing screen elements, ordering of screen data and content, screen navigation and flow, visually pleasing composition, amount of information, focus and emphasis, presenting information simply and meaningfully, technological considerations in interface design.

UNIT III

Windows: Characteristics, components, operations, Selection of devices based and screen based controls. **Components:** Icons and images, Multimedia.

UNIT IV

Organize and Layout windows and pages: General Guidelines, Organization guidelines, control navigation, window guidelines, web page guidelines. **Testing User interfaces:** The purpose of Usability testing, Importance of Usability testing, Scope of Testing, prototypes and kind of Tests, Developing and Conducting the Test

20AI&DS5205D PROGRAMMING FOR DATA SCIENCE

Course Category	Open Elective I	Credits	3
Course Type	Theory	L-T-P	2-0-2
Prerequisites	_	Continuous Eval Semester End Eval Total Marks	30 70 100

COURSE OUTCOMES

1. Understand the fundamentals of Data Science concepts

- 2. Apply various pre-processing techniques in Data Science
- 3. Apply various schemas and operations of the Data Warehouse.
- 4. Analyze different types of data science algorithms to solve real life problems.

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

																3.6.1, 3.7.1

COURSE CONTENT

UNIT I

Introduction: AI, Machine Learning and Data Science; What is data Science: Extracting Meaningful patterns, Building representative models, Combination of statistics, Machine learning and Computing, learning algorithms, Associated fields. Case for Data Science: Volume, Dimensions, Complex Questions; Data Science Classification; Data Science Algorithms

Getting to Know your Data: Data Objects and Attribute Types, Basic Statistical Descriptions of Data, Data Visualization, Measuring Data Similarity and Dissimilarity

UNIT II

Data Science Process: Prior Knowledge, Data Preparation, Modeling, Evaluation, Deployment

Data Preprocessing: An Overview; **Data Cleaning**- Missing Values, Noisy data; **Data Integration**-Entity Identification problem, Redundancy and Correlation Analysis;

Data Reduction- Overview of Data Reduction Strategies, Wavelet Transformation, Principal Components Analysis; Attribute Subset selection;

Data Transformation- Data Transformation Strategies Overview, Data Transformation by Normalization,

UNIT III

Data Warehouse Basic Concepts- What Is a Data Warehouse, Differences between Operational Database Systems and Data Warehouses, Data Warehousing: A Multitiered Architecture, Data Warehouse Models: Enterprise Warehouse, Data Mart, and Virtual Warehouse, Extraction, Transformation, and Loading, Metadata Repository

Data Warehouse Modeling: Data Cube and OLAP- Data Cube: A Multidimensional Data Model, Stars, Snowflakes, and Fact Constellations: Schemas for Multidimensional Data Models, Dimensions: The Role of Concept Hierarchies, Measures: Their Categorization and Computation, Typical OLAP Operations

UNIT IV

Mining Frequent Patterns, Associations-Market Basket Analysis: A Motivating Example, Frequent Item sets, Closed Item sets, and Association, Apriori Algorithm: Finding Frequent Item sets by Confined Candidate Generation, Generating Association Rules from Frequent Item sets. Classification: What Is Classification, Decision Tree Induction, Attribute Selection Measures. Cluster Analysis: What Is Cluster Analysis?, Requirements for Cluster Analysis, k-Means Algorithm Model Evaluation: Generalization Error – Out-of-Sample Evaluation Metrics – Cross Validation – Over fitting – Under Fitting.

TEXTBOOKS

20AI&DS5351 ARTIFICIAL INTELLIGENCE LABORATORY

Course Category	Program Core	Credits	1.5
Course Type	Laboratory	L-T-P	0-0-3
Prerequisites	20AI&DS4302 Design and Analysis of Algorithms	Continuous Eval Semester End Eval Total Marks	$30 \\ 70 \\ 100$

COURSE OUTCOMES

- 1. Apply artificial intelligence techniques to solve problems
- 2. Apply knowledge representation approaches to solve problems
- 3. Apply natural language processing on real world scenarios.
- 4. Apply the concepts of connectionist Models for complex problems.

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

20HS5153 ENGLISH COMMUNICATION SKILLS LABORATORY

Course Category	Institutional Core	Credits	1
Course Type	Laboratory	L-T-P	0-0-2
Prerequisites	20TP4106 English for Professionals	Continuous Eval Semester End Eval Total Marks	$30 \\ 70 \\ 100$

COURSE OUTCOMES

- 1. Execute rational pronunciation of speech sounds including accentuation.
- 2. Apply elements of listening comprehension in professional environments.
- 3. Develop the abilities of rational argumentation and skills of public speaking.
- 4. Demonstrate proficiency in the elements of professional communication including the competitive examination.

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

3										3	2	3		2	4	
4						1		1		3	2	3		2	4	

COURSE CONTENT

UNIT I: Elements of Spoken Expression and processes of Listening Comprehension:

- Speech Mechanism
- Articulation of vowels and consonants
- Patterns of Accentuation Types and processes of Listening comprehension

UNIT II: Patterns of Substantiation and Refutation in Public Speaking:

- Group Discussion(Open and Monitored)
- Pyramid Discussion

• PNI Seminar Talk and Power Point Presentation

UNIT III: Professional Communication:

- Self Affirmation
- Advanced Composition including Memo and e-mail
- Résumé Preparation Corporate ethic of Non-Verbal Communication

UNIT IV: Life Skills and Vocabulary for Competitive Examinations:

- Select Life Skills(50)
- Select Logies, Isms, Phobias and Manias (25 each)
- Sentence Completion and Double Unit Verbal Analogies (50 items) Fundamentals of Syllogisms(Descriptive and Pictorial)

ENGINEERING PROJECT FOR COMMUNITY SERVICES

Course Category	Project Work/Internship	Credits	1.5
Course Type	Laboratory	L-T-P	0-0-3
Prerequisites	_	Continuous Eval Semester End Eval Total Marks	$30 \\ 70 \\ 100$

COURSE OUTCOMES

- 1. Identify societal problem from the villages or towns with well-defined objectives.
- 2. Build a model for the problem chosen using modern tools and technology.
- 3. Organize the Technical report effectively.
- 4. Demonstrate the prototype/model to the identified client

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

CO	РО													SO	E	POI
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	B	1 01
1	1	3	1	2	2	3	3	3	3		1	2	1	2	2	
2	2	2	2	2	3	1		2	2		1	1	2	1	5	
3						1			2	2	1	1	2	1	2	
4	1	3	1	2	2	3	3	3	3		1	2	1	2	4	

Guidelines: **EPICS**: Engineering Project for community services will be carried out during summer vacation for a period of six weeks after IV Semester and the report shall be submitted in V Semester. Students will go to the society (Villages/ Hospitals/Towns, etc,.) to identify the problem and survey the literature for a feasible solution. The student(s) is encouraged to solve real life problems leading to innovative model building.. This can be done in a group of students or as an individual. Students need to take up a real life problem leading to innovative model building.

COURSE CONTENT

UNIT I

Problem solving through Competitive Coding, Problem solving using control structures, Numeric series and patterns, Code Complexity analysis, Linear/ Logarithmic/ Super linear/ Polynomial/ Exponential/ Factorial Algorithms, Problem solving on rotations of data, Problem solving on Order statistic problems, Problem Solving Examples Problem solving on matrix data, Memory manipulation techniques using pointers. Memory Arithmetic, Problem solving implementing pointer to an array, Memory Layout, overcoming the segmentation faults, Runtime memory allocation, Coding comparisons of Linear list data structure and Pointers, examples and Practice problems.

UNIT II

Problem solving on string data, Problem solving on String manipulations, coding problems using string handling functions, Problem solving on Multi-String Problems, Problem Solving for long strings, Examples, Practice problems. Problem solving using modular programming, Inter module communications, scopes of data in the code, Problem solving approaches using recursions, Evaluation of Recursive algorithms, Significance of mathematical Recurrence Relations, Evaluation of recurrence relations, Time Analysis, Examples, Practice problems.

UNIT III

Problem solving on operational and traversal logics on linked lists, Problem solving to compare linked lists, detection of a cycle/merge point, Merging sorted linked lists, coding problems on circular linked lists/Double linked lists, Examples, Practice problems. Problem Solving Problem solving through Linked list coding, traversals, Problem solving to compare linked lists, detection of a cycle/merge point, Merging sorted linked lists, Circular linked list formation, Double linked list formation, Examples, Practice problems.

UNIT IV

Problem solving through testing, implementing various testing approaches: Test strategy, Test development, Test execution, Bug fixing, Examples, Practice problems, Problem solving Methods and techniques. Understanding the problem as math abstract, formation of the logic, Identifying the corner cases, Examples, Practice problems, Version control systems, Git repositories and working trees, adding new version of the files to a Git repository, Examples, practice problems.

3		2		3											2	
4		1		2	3										4	

COURSE CONTENT

UNIT I

Introduction and Classification of Living organisms

Introduction: Fundamental differences between science and engineering, draw a comparison between eye and camera, Bird flight and aircraft. Biological observations of 18th Century that lead to major discoveries-examples from Brownian motion and the origin of thermodynamics by referring to the original observation of Robert Brown and Julius Mayor.

Classification: Classification of living organisms based on (a) Cellularity - Unicellular or multicellular (b) Ultrastructure- prokaryotes or eukaryotes. (c) Energy and Carbon utilization -Autotrophs, heterotrophs, lithotrophs (d) Ammonia excretion – ammonotelic, uricotelic, ureotelic (e)Habitat- aquatic, terrestrial (e) Molecular taxonomy- three major kingdoms of life.

UNIT II

Biomolecules and Enzymes

Biomolecules: Structures of sugars (Glucose and Fructose), starch and cellulose. Nucleotides and DNA/RNA. Amino acids and lipids. Proteins - structure and functionsas enzymes, transporters, receptors and structural elements.

Enzymes: Enzyme classification. Mechanism of enzyme action, Enzyme kinetics and kinetic parameters.

UNIT III

Genetics and Gene information Transfer

Genetics: Mendel's laws of inheritance, Concept of segregation and independent assortment. Concept of allele, recessiveness and dominance. Gene interaction-Epistasis. Cell cycle and cell division-Meiosis and Mitosis. Transfer of genetic material from parent to offspring during cell division.

Information Transfer: DNA as a genetic material. Hierarchy of DNA structurefrom single stranded to double helix to nucleosomes. Concept of genetic code. Universality and degeneracy of genetic code. Define gene in terms of complementation and recombination.

UNIT IV

Metabolism and Microbiology

Metabolism: Exothermic and endothermic reactions versus endergonic and exergonic reactions. Respiration- Breakdown of glucose to $CO_2 + H_2O$ (Glycolysis and Krebs cycle) Photosynthesis- synthesis of glucose from CO_2 and H_2O . Energy yielding and energy consuming reactions.

Microbiology: Concept of single celled organisms. Concept of species and strains. Identification and classification of microorganisms. Growth kinetics. Ecological aspects of single celled organisms. Microscopy.

SEMESTER VI

20AI&DS6301 BIG DATA ANALYTICS

Course Category	Program Core	Credits	3
Course Type	Theory	L-T-P	3-0-0
Prerequisites	20AI&DS3303 Database Systems	Continuous Eval Semester End Eval Total Marks	30 70 100

COURSE OUTCOMES

- 1. Understand the concepts of Big Data Analytics and hadoop
- 2. Analyze large dataset with Hadoop Distributed File System and MapReduce techniques to optimize storage space.
- 3. Apply MapReduce, Pig, and Hive tools for data analytics.
- 4. Apply Sqoop, and Zookeeper tools for solving the Data Analysis problems.

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

COURSE CONTENT

UNIT I

Introduction to Big Data Analytics: Big Data Overview, State of the Practice in Analytics, Key Roles for the New Big Data Ecosystem, Examples of Big Data Analytics. Data Analytics Lifecycle: Data Analytics Lifecycle Overview, Discovery, Data Preparation, Model Planning, Model Building, Communicate Results, Operationalize. Introduction to Hadoop: Data storage and analysis, Comparison with other systems, A Brief History of Hadoop, Apache Hadoop and the Hadoop Ecosystem.

UNIT II

Hadoop Distributed File system: The Design of HDFS, HDFS concepts, Command-Line Interface, Hadoop file systems, The Java Interface, Data Flow, Hadoop Archives. Hadoop I/O: Data Integrity in HDFS, LocalFileSystem, ChecksumFileSystem, Compression, Serialization, File-Based Data Structures, SequentailFile, Map File.

UNIT III

MapReduce: A Weather Dataset, Analyzing the data with Hadoop, Map and Reduce, Java Map and Reduce, Scaling Out, Hadoop Streaming, Hadoop Pipes. **MapReduce Types and Formats:** MapReduce Types, Input Formats, Output Formats. **MapReduce Features:** Counters, Sorting, Joins, Side Data Distribution and MapReduce Library Classes.

UNIT IV

Pig:Pig-Installation and Running of Pig, Execution Types, Running Pig Programs, Pig Latin Editors, Comparison with databases, Pig Latin, Functions, Data Processing Operators. **Hive:** Installing Hive, An Example, Running Hive, Comparison with Traditional Databases, HiveQL, Tables, Querying Data. **Zookeeper:** Zookeeper Service, Building applications with Zookeeper, Zookeeper in production. **Sqoop:** Database Imports, working with Imported Data, Importing Large Objects, Performing an Export.

COURSE CONTENT

UNIT I: INTRODUCTION

The Math Behind Machine Learning: Scalars, Vectors, Matrices, Tensors, Hyperplanes, Mathematical Operations, Probabilities, Distributions, Resampling methods Overview of machine learning: linear classifiers **Foundations of Neural Networks and Deep Learning:** Neural Networks The Biological Neuron The Perceptron Multilayer Feed-Forward Networks Training Neural Networks Backpropagation Learning Activation Functions: Sigmoid, Softmax, Rectified Linear Unit **Loss Functions:** Loss Function Notation ,Loss Functions for Regression, Loss Functions for Classification, Loss Functions for Reconstruction Hyperparameters: Learning Rate ,Regularization , Momentum, Sparsity

UNIT II

Implementing Neural Networks in TensorFlow: What Is TensorFlow? How Does TensorFlow Compare to Alternatives? Installing TensorFlow , Creating and Manipulating TensorFlow Variables, TensorFlow Operations , Placeholder Tensors , Sessions in TensorFlow Navigating Variable Scopes and Sharing Variables , Managing Models over the CPU and GPU, Specifying the Logistic Regression Model in TensorFlow, Logging and Training the Logistic Regression Model

UNIT III

Fundamentals of Deep Networks Define Deep learning, Deep networks, Common Architectural Principles of Deep Networks, Building Blocks of Deep Networks Major Architectures of Deep Networks: Convolutional Neural Networks (CNNs):CNN Architecture Overview, Layers and Applications of CNNs Recurrent Neural Networks:General Recurrent Neural Network Architecture, LSTM Networks, Applications Unsupervised Pretrained Networks: Deep Belief Networks (DBNs) Generative Adversarial Networks (GANs)

UNIT IV

Deep Learning applications: Image segmentation, Natural Language Processing, Healthcare. **Tuning techniques for deep networks:** Basic Concepts in Tuning Deep Belief Networks (DBNs) Convolutional Neural Networks (CNNs) and Recurrent Neural Networks

TEXTBOOKS

COURSE CONTENT

UNIT I

The Nature of Software: The Nature of Software, The changing nature of software.

Software engineering: The Software Process, Software Engineering Practice, Software Development Myths.

The Software Process: Software Process Structure. A Generic Process Model, Defining a framework activity, identifying a task set, Process patterns, Process Assessment and Improvement.

Process models: Prescriptive Process Models, Specialized Process Models, The Unified Process, Personal and Team Process Models.

Agile Development: What Is Agility? Agility and the Cost of Change, What Is
an Agile Process? Extreme Programming (XP) Other Agile Process Models, A Tool Set for the Agile Process.

UNIT II

Understanding Requirements: Requirements Engineering, Establishing the Groundwork, Eliciting Requirements, Developing Use Cases, Building the Analysis Model, Negotiating Requirements, Requirements monitoring, and Validating Requirements. Requirements Modelling: Scenario Based Methods: Requirements Analysis, Scenario-Based Modelling, UML Models That Supplement the Use Case.

Requirements Modelling: Class based methods, Identifying Analysis classes, Specifying attributes, Defining operators, Class-Responsibility-Collaborator Modelling, Associates and Dependencies, Analysis Packages Requirements Modelling: Behaviour, Patterns, And Web apps: Creating a Behavioural Model, Identifying events with Use Cases, State Representations, Patterns for Requirements Modelling, Requirements Modelling for Web and Mobile Apps.

UNIT III

Design Concepts: Design within the Context of Software Engineering, the Design Process, Design Concepts, the Design Model.

Architectural Design: Software Architecture, Architectural Genres, Architectural Styles, Architectural Considerations, Architectural Decisions, Architectural Design. Component-Level Design: What Is a Component? Designing Class-Based Components, Conducting Component Level Design, and Component level design for Web Apps, Component Level Design for Mobile Apps.

User Interface Design: The Golden Rules, User Interface Analysis and Design, Interface Analysis, Interface Design Steps, Webapp and Mobile Interface Design.

UNIT IV

Software Testing Strategies: A Strategic Approach to Software Testing, Strategic Issues, Test Strategies for Conventional Software, Test Strategies for Object-Oriented Software, Test Strategies for WebApps, Test Strategies for MobileApps, Validation testing, System testing, the art of debugging.

Testing Conventional Applications: Software Testing Fundamentals, Internal and External Views of Testing, White Box Testing, Basis Path Testing, Control Structure Testing, Black-Box Testing.

COURSE CONTENT

UNIT I

Introduction: Definitions, Sequencing, Biological sequence/structure, Genome Projects, Pattern recognition an prediction, Folding problem, Sequence Analysis, Homology and Analogy.

Protein Information Resources: Biological databases, Primary sequence databases, Protein Sequence databases, Secondary databases, Protein pattern databases, and Structure classification databases.

UNIT II

Genome Information Resources: DNA sequence databases, specialized genomic resources.

DNA Sequence Analysis: Importance of DNA analysis, Gene structure and DNA sequences, Features of DNA sequence analysis, EST (Expressed Sequence Tag) searches, Gene hunting, Profile of a cell, EST analysis, Effects of EST data on DNA databases.

UNIT III

Pair wise Alignment Techniques: Database searching, Alphabets and complexity, Algorithm and programs, Comparing two sequences, sub-sequences, Identity and similarity, The Dot plot, Local and global similarity, different alignment techniques, Dynamic Programming, Pair wise database searching.

Multiple Sequence Alignment: Definition and Goal, The consensus, computational complexity, Manual methods, Simultaneous methods, Progressive methods, Databases of Multiple alignments and searching.

UNIT IV

Secondary Database Searching: Importance and need of secondary database searches, secondary database structure and building a sequence search protocol

Analysis Packages: Analysis package structure, commercial databases, commercial software, comprehensive packages, packages specializing in DNA analysis, Intranet Packages, Internet Packages

20AI&DS6404B DATA ANALYTICS FOR CYBER SECURITY

Course Category	Program Elective II	Credits	3
Course Type	Theory	L-T-P	3-0-0
Prerequisites	20BS4101G – Numerical Methods for Data Analysis	Continuous Eval Semester End Eval Total Marks	$30 \\ 70 \\ 100$

COURSE OUTCOMES

1. Understand Cybersecurity and sources of Cybersecurity Data

- 2. Understand need of big data analytics and anomaly detection for Cybersecurity
- 3. Apply anomaly detection methods to Spatiotemporal and Graph Data
- 4. Apply data analytics techniques to prevent and mitigate risks of Cyberattack.

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

4	2	3		1										1	3	1.7.1, 2.5.3, 4.5.1

COURSE CONTENT

UNIT I

Introduction: Cybersecurity, Handling Cyberattacks, Data Analytics. **Sources** of Cybersecurity Data: End-to-End Opportunities for Data Collection, Sources of Cybersecurity Data Log Data, Raw Payload Data, Network Topology Data, User System Data, Other Datasets, Integrated Use of Multiple Datasets. **Data Mining:** Knowledge Discovery and Data Mining Process Models, Data Pre-processing, Data Mining.

UNIT II

Big Data Analytics and Its Need for Cybersecurity: Big Data, Big Data in Cybersecurity, Landscape of Big Data Technologies, Mahout and Spark Comparative Analysis, Complex Nature of Data, Change Detection in Massive Traffic Datasets, Multipronged Attacks, Privacy and Security Issues in Big Data. *Types of Cyberattacks:* Types of Attacks, Computational Data Model for Social Engineering, Attributes of Advanced Persistent Threat, Data Analytics Methods for Persistent

Threats. *Anomaly Detection for Cybersecurity:* Anomalies, Anomalies, Motivating Example: BGP Hijacking, Challenges in Understanding Anomalies, Interpretation, Treating Anomalies.

UNIT III

Anomaly Detection Methods: Statistical Outlier Detection Tests, Density-Based Outlier Detection: OPTICS-OF Identifying Local Outliers, Distance-Based Outlier Detection, Outlier Detection through Clustering. Cybersecurity through Time Series and Spatial Data: Spatial and Temporal Data, Some Key Methods for Anomaly Detection in Spatial and Temporal Data, Cybersecurity through Spatiotemporal Analysis, Temporal Behaviors in Evolving Networks. Cybersecurity through Network and Graph Data: Graph Properties, Understanding Evolving Network Communication, Similarity-Based Redundancy in Router Connectivity.

UNIT IV

Human-Centered Data Analytics for Cybersecurity: Phishing, Insider Threat, User/Employee Viewpoint, Attacker Viewpoint: Anomaly Detection Methods. Future Directions in Data Analytics for Cybersecurity: Data Analytics in Cyberphysical Systems, Multidomain Mining, Advanced Machine Learning Models, Ethical Thinking in the Data Analytics Process.

4			2					2						2	2	3.6.2, 8.3.1

COURSE CONTENT

UNIT I: INTRODUCTION

Introduction of Cybercrime: Definition and Origins of the Word, Cybercrime and Information Security, Cybercriminals, Classifications of Cybercrimes: E-Mail Spoofing, Spamming, Internet Time Theft, Salami Attack/Salami Technique, Data Diddling, Forgery, Web Jacking, Newgroup Spam, Industrial Espionage, Hacking, Online Frauds, Pornographic Offenses, Software Piracy, Computer Sabotage, E-Mail bombing, computer network intrusions, password sniffing, credit card frauds, identity theft. **UNIT II**

Cyber offenses: Criminals Plan: Categories of Cybercrime Cyber Attacks: Reconnaissance, Passive Attack, Active Attacks, Scanning/Scrutinizing gathered Information, Attack, Social Engineering: Classification of Social Engineering.

Cyberstalking: Types of Stalkers, Working of Stalking, Real-Life Incident of Cyber stalking, Cybercafe and Cybercrimes, Botnets: The Fuel for Cybercrime, Botnet, Attack Vector, Attacks on mobile/cell phones – Theft, viruses, mishing, vishing, smishing, hacking Bluetooth.

UNIT III

Tools and Methods: Introduction, Proxy Servers and Anonymizers, how phishing works, password cracking, keyloggers and spywares, types of viruses, steganography, DoS and DDoS attacks – classification, types, tools used for launch, DDoS attacks, protection, SQL injection – steps and prevention, Buffer Overflow – types and minimizing attack, Attacks on Wireless Networks.

UNIT IV

Organizational Implications Introduction –Insider threats, Privacy, Key challenges to organizations, Cost of Cybercrimes and IPR issues

Incident Handling: Definitions, Organizations need Incident Response systems, Examples of incidents, what organizations can do to protect, best practices for organizations.

4		2		2	2									2	3	2.7.1, 4.6.1, 5.4.1	

COURSE CONTENT

UNIT I

Introduction to IoT: Definition and Characteristics of IoT, *Physical design of IoT* – Things in IoT, IoT Protocols, *Logical Design of IoT* – IoT Functional Blocks, IoT communication models, IoT Communication APIs, *IoT Enabling technologies*- Wireless Sensor Networks, Cloud Computing, Big data analytics, Communication protocols, Embedded Systems, *IoT and M2M* – Introduction, M2M, Difference between IoT and M2M

UNIT II

Introduction to AIoT: Introduction, Industry 5.0 Paradigm, Artificial Intelligence (AI) in the Internet of Things (IoT), AI-Based Trustworthiness in IoT Systems, AI Tools for IoT, Applications of the Internet of Things, Open Research Challenges for AI-Based IoT Systems, **IoT Ecosystem:** core components of an IoT ecosystem, IoT Knowledge Hierarchy, Paradigms of Intelligent IoT-Generalized Fog-Edge-

Cloud-Enabled IoT, Machine Learning-Enabled IoT Intelligence, Applications of IoT Ecosystems.

UNIT III

Machine Learning Techniques in Internet of Things: introduction, Evolution of Machine Learning Techniques, Internet of Things and Cloud Applications, Machine Learning Techniques for IoT-Based Cloud Applications, Challenges in Internet of Things (IoT)-Based Cloud Applications **Deep Learning Frameworks for Internet of Things:** Introduction, Architecture for Deep Neural Network, Framework for Deep Neural Network, Deep Reinforcement Learning Approaches, Applications of Deep Learning in IoT Scenarios, Challenges

UNIT IV: Applications of AIOT:

Personal and Home IoT: Personal IoT, IoT and Smart homes, **AI For Industrial IoT:** Introduction to AI powered industrial IoT, Predictive maintenance using AI, electrical load forecasting in industry. **AI For Smart cities IoT:** introduction, components of smart city, apply IoT for smart cities and the necessary steps, challenges.

COURSE CONTENT

UNIT I

Parallel Programming Platforms: Implicit parallelism: Trends in Microprocessor Architectures, Limitations of memory system performance, Dichotomy of parallel computing platforms, physical organization of parallel platforms, Routing mechanisms for interconnection networks. **Principles of Parallel Algorithm Design:** Preliminaries, decomposition Techniques, Characteristics of tasks and interactions, mapping techniques for load balancing, parallel algorithm models.

UNIT II

Basic communication operations: One-to-All Broadcast and All-to-One Reduction, All-to-All Broadcast and Reduction, All-Reduce and Prefix-Sum Operations, Scatter and Gather. **Analytical modelling of parallel programs:** sources of overhead in parallel programs, performance metrics for parallel systems, The Effect of granularity on performance, scalability of parallel systems.

UNIT III

Programming using the message passing paradigm: Principles of Message passing programming, the building blocks: Send and Receive Operations, MPI: the message passing interface, Overlapping communication with computation, collective communication and computation Operations. **Programming shared address space platforms:** Thread Basics, why Threads, Thread Basics: Creation and Termination, Synchronization primitives in Pthreads, OpenMP: a standard for Directive based Parallel Programming.

UNIT IV

Dense Matrix Algorithms: Matrix-Vector Multiplication, Matrix – Matrix Multiplication, Quick sort. **Sorting:** Issues in Sorting on Parallel Computers, Sorting Networks, Bubble sort and its variants. **Graph Algorithms:** Minimum Spanning Tree: Prim's Algorithm, Single-Source shortest paths: Dijkstra's Algorithm, all-pairs shortest paths, Transitive closure, connected components.

20AI&DS6404F NATURAL LANGUAGE PROCESSING

Course Category	Program Elective II	Credits	3
Course Type	Theory	L-T-P	3-0-0
Prerequisites	20ES2103C - Programming Essentials in Python	Continuous Eval Semester End Eval Total Marks	30 70 100

COURSE OUTCOMES

- 1. Understand linguistic phenomena to model formal grammars.
- 2. Understand proper experimental methodology for training and evaluating empirical NLP systems
- 3. Apply probabilities to construct statistical models over strings and trees and analyze NLP Algorithms.
- 4. Apply different language modeling Techniques

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

COURSE CONTENT

UNIT I

Finding the Structure of Words: Words and Their Components: Tokens, Lexemes, Morphemes, Typology, Issues and Challenges: Irregularity, ambiguity, Productivity, Morphological Models: Dictionary Lookup, Finite-State Morphology, Unification based Morphology, Functional Morphology, Morphology Induction. **Finding the Structure of Documents:** Introduction: sentence boundary detection, Topic boundary detection, Methods: Generative Sequence Classification Methods, Discriminative Local Classification Methods, Discriminative Sequence Classification Methods, Hybrid Approaches, Extensions for Global Modeling for Sentence Segmentation, Complexity of the Approaches, Performances of the Approaches

UNIT II

Syntax Analysis: Parsing Natural Language, Tree banks: A Data-Driven Approach to Syntax, Representation of Syntactic Structure: Syntax Analysis Using Dependency Graphs, Syntax Analysis Using Phrase Structure Trees, Parsing Algorithms: Shift-Reduce Parsing, Hypergraphs and Chart Parsing, Minimum Spanning Trees and Dependency Parsing, Models for Ambiguity Resolution in Parsing: Probabilistic Context-Free Grammars, Generative Models for Parsing, Discriminative Models for Parsing, Multilingual Issues: Tokenization, Case, and Encoding, Word Segmentation, Morphology

UNIT III

Semantic Parsing: Introduction, Semantic Interpretation: Structural Ambiguity Word Sense, Entity and Event Resolution, Predicate-Argument Structure, Meaning Representation, System Paradigms, Word Sense Systems: Resources, Systems, Software **Predicate-Argument Structure:** Predicate-Argument Structure: Resources, Systems, Software, Systems, Representation Systems: Resources, Systems, Software

UNIT IV

Discourse Processing: Cohension, Reference Resolution, Discourse Cohension and Structure **Language Modeling:** Introduction, N-Gram Models, Language Model Evaluation, Parameter Estimation, Language Model Adaptation, Types of Language Models, Language-Specific Modeling Problems, Multilingual and Cross lingual Language Modeling

20AI&DS6205A

ARTIFICIAL INTELLIGENCE IN WEB DEVELOPMENT

Course Category	Open Elective - 2	Credits	3
Course Type	Theory	L-T-P	2-0-2
Prerequisites	20ES2103C – Programming Essentials in Python 20AI&DS5301 - Artificial Intelligence	Continuous Eval Semester End Eval Total Marks	30 70 100

COURSE OUTCOMES

- 1. Understand the fundamentals of Artificial Intelligence in World Wide Web.
- 2. Apply principles of web intelligence and information retrevial on a given web application.
- 3. Analyse different Social and Semantic web applications.
- 4. Apply a fundamental concepts of Social network intelligence and web knowledge management.

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

COURSE CONTENT

UNIT I

Introduction to World Wide Web: Brief history of the Web and the Internet, Blogs, Tweets, Wikis, Collaborative mapping, Aggregation technologies, Open platforms, application programming interface, and programming tools, Web intelligence, Intelligence in web applications, Organization of this book.

Overview of constituents for the new artificial intelligence: Foundations of the new artificial intelligence and knowledge-based system, Fuzzy systems, Artificial neural networks, Genetic algorithms and evolutionary computing, Rough sets, Soft computing, Benefits of the new AI to World Wide Web.

UNIT II

Web intelligence: Internet, web, grid, and cloud, Introduction to web intelligence, Perspectives of WI, Levels of WI, Goal of WI, Characteristics of web intelligence, Challenges and issues of WI, Wisdom web, Web-based support systems, Designing an intelligent web, Future of WI.

Web information retrieval: Introduction, Typical web search engines, Architecture of a web crawler, Distributed crawling, Focused spiders/crawlers, Collaborative crawling, Some tools and open source for web crawling, Information retrieval: beyond searching, Models of information retrieval, Performance measures in IR, Natural language processing in conjunction with IR, Knowledge-based system for information retrieval, Research trends.

UNIT III

Web mining: Introduction to web mining, Evolution of web mining techniques, Process of web mining, Web content mining, Web usage mining, Web structure mining,

Sensor web mining: architecture and applications, Web mining software, Opinion mining, Other applications using AI for web mining, Future research directions.

Semantic web: Introduction to semantic web, Metadata, Layered architecture of semantic web, Refined architecture of semantic web, Ontology and ontology constructs, Meta-ontology, Ontology tools and editors, Annotation tools, Inference engines, Semantic web applications, Semantic web interoperability and web mining, Semantic web and social communities, Semantic web and intelligent search, Semantic web research issues.

UNIT IV: Web Information Retrieval

Web knowledge management: Web knowledge management, Web knowledge management, Web knowledge management, Utilization of knowledge management methodologies on semantic web, Exchanging knowledge in virtual entities *Social network intelligence:* Introduction to social networking, Friend-of-a-friend, Semantically interlinked online communities, Social network analysis, Social network data, hCard and XFN, Advantages and disadvantages of social networking, Social graph application programming interface, Social search and artificial intelligence

20AI&DS6205B ARTIFICIAL INTELLIGENCE IN AGRICULTURE

Course Category	Open Elective - 2	Credits	3
Course Type	Elective	L-T-P	2-0-2
Prerequisites	20AI&DS5301 ARTIFICIAL INTELLIGENCE	Continuous Eval Semester End Eval Total Marks	$30 \\ 70 \\ 100$

COURSE OUTCOMES

- 1. Understand Smart Precision Agriculture and adoption of Wireless Sensor Network (WSN).
- 2. Understand the idea of Agriculture powered by AI/ML
- 3. Analyze the use of AI, ML and IoT in Agricultural data driven and decision support system.
- 4. Analyze agriculture 5.0 and its effects on social and economic systems.

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

COURSE CONTENT

UNIT I

Introduction to Precision Agriculture

History of Precision Agriculture and its Global Adoption, Precision Agriculture – introduction, Need and Scope of Precision Agriculture, Components of Precision Agriculture, Tools and Techniques, Site-Specific Crop Management (SSCM), Variable Rate Application (VRA) and Variable Rate Technology (VRT), Adoption of Smart Precision Agriculture, Some Misconceptions About Precision Agriculture

Smart Intelligent Precision Agriculture

Modern Day Agriculture, Digitization of Agriculture-Digital Farming, Transition to

Smart Intelligent Precision Agriculture, Benefits of Smart Intelligent Precision Agriculture

Adoption of Wireless Sensor Network (WSN) in Smart Precision Agriculture

Sensors and Wireless Sensor Network, Evolution of Wireless Sensor Networks, Introduction of WSN in Agriculture, Features of Agriculturally Based Sensors, Types of Sensors Used for WSN Agricultural System, Intelligent Sensors Versus Smart Sensors, Impact of the Wireless Sensors on Traditional Agriculture, Sensor Based Variable Rate Application, Applications of WSN in Precision Agriculture, Security Issues and Challenges for WSN Implementation

UNIT II

IoT (Internet of Things) Based Agricultural Systems

Introduction, Architecture of IoT, Brief Overview of IoT Network, Characteristics of Internet of Things, Inter-Operability Challenges, Applications of IoT in Smart Agriculture, Challenges for the Implementation of IoT in Smart Farming, Security and Privacy Issues of an IoT, Fusion of Cloud Platform with IoT

AI (Artificial Intelligence) Driven Smart Agriculture

Artificial Intelligence (AI) – Introduction, Categories of AI, Subsets of AI, Life Cycle of an Artificial Intelligence-Based, Prerequisites for Building an ML/AI-Based Agricultural Model, Advantages of A.I in Agriculture

UNIT III

Machine Learning (ML) Driven Agriculture

Cognitive Technologies, Introduction to Machine Learning, Types of ML, Artificial Neural Networks and Deep Learning, General Applications of Machine Learning, Scope of Artificial Intelligence and Machine Learning in Agriculture, Applications of A.I and M.L in Agriculture,

Data-Driven Smart Farming

Introduction, Collection and Management of Real-Time Agricultural Big Data, Transforming Field Data into Meaningful Insights, Processing and Predictive Analysis of Agricultural Data, Predictive Modeling

Decision-Making and Decision-Support Systems

Introduction, Intelligent Agricultural Decision Support Systems (ADSS), Features and Workings of an Intelligent Agricultural Decision Support System (ADSS), Intelligent Decision-Making using AI, ML, and IoT for Farmers

UNIT IV

Agriculture 5.0 - The Future

Introduction to Agriculture 4.0, Nanotechnology and Smart Farming, Blockchain-Securing the Agriculture Value Chain, Edge-Fog Computing for Smart Farming, Role of Big Data in Agriculture , Transition to Agriculture 5.0

Social and Economic Impacts

Societal and Economic Impact of AI, ML, and IoT in Intelligent Precision Farming,

Existence of Forums for Innovation and Commercialization of Intelligent Precision Farming Technology (IPFT) - Cost-Benefit Analysis of IPFT, Likeliness of Farmers Towards the Technology ICAR–NAARM Policy, Farmers Perception and Concern

Environmental Impact and Regulations

Potential Impact on the Environment with Different IPFT, Policy Making and Governance, Current Policy Trends and Regulation in India, Research and Development Needed in India.

COURSE CONTENT

UNIT I

Introduction to Cloud Computing - Cloud Computing in a Nutshell, Roots of Cloud Computing, Layers and Types of Clouds, Desired Features of a Cloud, Cloud Infrastructure Management, Infrastructure as a Service Providers, Platform as a Service Providers, Challenges and Risks

Migrating into a Cloud - Introduction, Broad Approaches to Migrating into the Cloud, The Seven-Step Model of Migration into a Cloud

UNIT II

Virtualization: Introduction, Characteristics of Virtualized Environments, Taxonomy of Virtualization Techniques - Execution Virtualization, Other types of Virtualization, Virtualization and Cloud Computing, Pros and Cons of Virtualization,

Technology Examples – Xen, VMware, Microsoft Hyper-V.

Cloud Simulators- CloudSim and GreenCloud

Introduction to Simulator, understanding CloudSim simulator, CloudSim Architecture(User code, CloudSim, GridSim, SimJava) Understanding Working platform for CloudSim, Introduction to GreenCloud

UNIT III

Cloud Platforms and Applications:

Amazon web services - Compute services, Storage services, Communication services and Additional Services. Google AppEngine - Architecture and core concepts, Application life cycle, Cost model, Observations. Microsoft Azure – Azure Core Concepts, SQL Azure, Windows Azure Platform Appliance

Cloud Applications:

Scientific Applications – Healthcare, Biology, Geoscience, Business and Consumer Applications – CRM and ERP, Productivity, Social Networking, Media Applications, Multiplayer Online Gaming

UNIT IV

Data Security in the Cloud - Introduction, Current State, Homo Sapiens and Digital Information, Cloud Computing and Data Security Risk, Cloud Computing and Identity, The Cloud, Digital Identity, and Data Security

Legal Issues in Cloud Computing - Introduction, Data Privacy and Security Issues, Cloud Contracting models, Jurisdictional Issues Raised by Virtualization and Data Location

TEXTBOOKS

Course Category	Open Elective - 2	Credits	3
Course Type	Open Elective	L-T-P	2-0-2
Prerequisites	20AI&DS5302 – Machine Learning	Continuous Eval Semester End Eval Total Marks	30 70 100

COURSE OUTCOMES

- 1. Understand the genealogy of artificial beings and robot operation systems.
- 2. Understand different robot making processes, basics on social robots and human-robot interaction.
- 3. Apply machine learning algorithms for decision making and approaches for risk assessment and mitigation.
- 4. Analyze algorithms related to robot movements and Multi robot systems.

COURSE CONTENT

UNIT I

Genealogy of Artificial Beings: Robot, Early Automata, Industrial revolutions, Modern robotics, social robotics, Robotics futures and Trans-robotics.

The Robot Operating System: Introduction, ROS, Key Features from the Core, Additional Useful Features, Linux for Robotics

Mathematical Building Blocks: Introduction, Basic Geometry and Linear Algebra, Geometric Transformations, Basic Probability, Derivatives, Basic Statistics.

UNIT II

Robots Making: Introduction, Sensing the world with sensors, Common Sensors in Robotics, Moving about with Actuators, Computer Vision in Robotics.

Social Robots: Introduction, Cobots, Social Robots and Human–Robot Interaction, Conduct Research, Research Variables, Sampling, Reliability and Validity, Ethics: Ethical Principles in Research, Data, Analysis and Interpretation, Common Mistakes and Pitfalls

UNIT III

Managing the World Complexity: Introduction, Definitions, Linear Regression, Training Generalizable Models, Deep Neural Networks, Gradient Backpropagation, Convolutional Neural Network, Recurrent Neural Networks and their applications, Deep Reinforcement Learning and its applications.

Safety of Robotic Systems: Introduction, Terms and Definitions, Industrial Risk Assessment and Mitigation

UNIT IV

Control, Navigation and Path Planning: Introduction, Mobile Robots, Controlling robots, Path Planning, Obstacle Avoidance.

Localization and Mapping: Introduction, Robot Localization Problem, Robot Mapping Problem, Simultaneous Localization and Mapping.

Multi-robot Systems: Introduction, Types of multi-robot systems, Swarm Programming, Deployment of Real-world swarm systems

20AI&DS6351 BIG DATA ANALYTICS LABORATORY

Course Category	Program Core	Credits	1.5
Course Type	Lab	L-T-P	0-0-3
Prerequisites	20AI&DS3303 Database Systems	Continuous Eval Semester End Eval Total Marks	30 70 100

COURSE OUTCOMES

- 1. Analyze large dataset with Hadoop Distributed File System to optimize storage space.
- 2. Apply MapReduce tools to solve on real time applications.
- 3. Use Hadoop ecosystem for analysing data.
- 4. Apply Hive tools for quering the Data Analysis problems.

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

COURSE CONTENT

Task 1: Hadoop Installation and shell commands: environment

1. Installing Hadoop

2. Executing basic shell commands.

- Task 2: Hadoop file management:1. Writing a file from local file system toHadoop Distributed file system.
 - 2. Reading a file from HDFS to the local file system.
- **Task 3: Word Count application:** Implementation of Word Count Program using MapReduce Paradigm
- Task 4: Weather Data Analysis: Implementation of Map reduce algorithm for analyzing hot and cold days.
- **Task 5: Map reduce Application:** Implement a Map reduce program to identify "common friends" among all pairs of users.
- Task 6: Pig Latin scripts: To sort ,group, join for a given dataset.
- Task 7: Joins using HIVE: Implementation of Inner Join, Left Outer Join, Right outer join and Full outer join using HIVE.
- Task 8: Database manipulation using Hive: To create, alter, drop databases and views
- Task 9:Functions and indexes in Hive: To create functions and indexes in hive

Course Category	Program Core	Credits	1.5
Course Type	Laboratory	L-T-P	0-0-3
Prerequisites	20AI&DS5302 Machine Learning	Continuous Eval Semester End Eval Total Marks	30 70 100

COURSE OUTCOMES

- 1. Apply deep learning techniques for object identification and segmentation
- 2. Design various Neural Networks for classification using TensorFlow Framework
- 3. Evaluate different deep learning models for optimized solution of hyper-parameter tuning
- 4. Implement Autoencoders and GAN for real time applications

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

CO			PO PSO										SO	Ľ	POI

COURSE CONTENT/TASKS

- 1. Familiarization of cloud based computing like Google colab
- 2. Implementation of Multilayer Neural Network for a sample dataset using Keras
- 3. Build a deep neural network model with linear regression using single and multiple variables
- 4. Write a program to implement image segmentation using deep learning techniques.
- 5. Implement SVM algorithm on a sample dataset using Softmax classifier

- 6. Study the effect of batch normalization and dropout in neural network classifier
- 7. Implement Yolo Algorithm for Object detection
- 8. Write a program for object recognition using RNN and compare it with CNN.
- 9. Write a program to develop a GAN for Generating MNIST Handwritten Digits
- 10. Write a program for Time-Series Forecasting with the LSTM Model.

TEXTBOOKS

- 1. Josh Patterson, Adam Gibson, Deep Learning: A Practitioner's

20AI&DS6353 SOFTWARE ENGINEERING LABORATORY

Course Category	Program Core	Credits	1.5
Course Type	Laboratory	L-T-P	0-0-3
Prerequisites	20AI&DS4309 Operating Systems	Continuous Eval Semester End Eval Total Marks	30 70 100

COURSE OUTCOMES

- 1. Compare different software engineering process models.
- 2. Analyse the principles of requirement engineering.
- 3. Create architectural design for a given project.
- 4. Apply different testing techniques

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

COURSE CONTENT

Task 1: Overview of SDLC: A Study

Task 2: Studying various phases of waterfall model.

Task 3: Estimation of Project Metrics using COCOMO model

Task 4: Identifying the Software Requirement from problem statements

Task 5: Project Planning.

Task 6: Capturing use case and modelling use case diagram for the given problem

- **Task 8:** OOA: Identifying Domain Classes from the problem statement and State Transition Diagram.
- **Task 9:** Interaction diagrams: Sequence and collaboration diagrams and Flow of events and activity diagram.
- Task 10: Software Design: software architecture and object oriented design.
- Task 11: Component and Deployment diagrams.
- Task 12: Estimation of test coverage metrics and Structural Complexity.
- Task 13: Software Testing.
- Task 14: Design Test Suits.

20TP6106 QUANTITATIVE APTITUDE

Course Category	Soft Skills - 4	Credits	1
Course Type	Learning by doing	L-T-P	0-0-2
Prerequisites	_	Continuous Eval Semester End Eval Total Marks	100 0 100

COURSE OUTCOMES

- 1. Effectively organize, summarize and present information in quantitative forms including tables,
- 2. Use mathematical based reasoning and to evaluate alternatives and make decisions
- 3. Think and reason logically and critically in any given situation.
- 4. Apply logical thinking to solve problems and puzzles in qualifying exams for companies and in other competitive exams

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

4								2		3	3				2	

COURSE CONTENT

UNIT I

- Number system
- HCF & LCM,
- Average,
- Percentages,
- Profit & Loss

UNIT II

• Ratio & Proportion,

- Partnership,
- Chain Rule,
- Time & Distance,
- Time & Work

UNIT III

- Pipes & Cistern,
- Problems on Trains,
- Problems on boats & Steams,
- Allegation,
- Simple interest and compound interest.

UNIT IV

- Area, Volume and Surface areas,
- Races & Games of skills,
- Calendar & Clock,
- Stocks & Shares,
- Permutations & Combination, Probability.

1. Learning Resources: Quantitative Aptitude by R.S..Aggarwal

REFERENCE BOOKS

20AI&DS6554 MINI PROJECT - I

Course Category	Project	Credits	1
Course Type	Project	L-T-P	0-0-2
Prerequisites	20AI&DS5354 EPICS	Continuous Eval Semester End Eval Total Marks	$30 \\ 70 \\ 100$

COURSE OUTCOMES

- 1. Formulate Domain Analysis, Elaboration through Modeling and Implementation through state of the art technology available.
- 2. Develop generic and modular programs that includes Handling exceptional cases in providing reliable solutions
- 3. Testing and verification of programs for different scenarios
- 4. Conclude findings through oral presentations
- 5. Prepare proper documentation consisting of Software Requirements Specification (SRS), Modeling Techniques, Development Strategies, Implementation and Testing Strategies, use any Design Methodologies such as SSAD, OOAD and UML
- 6. Builds the spirit of team work in design process.
- 7. Become proficient in the programming languages

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

COURSE CONTENT

Mini Project I could be done by a group of students; involves working under a faculty member and carry out detailed feasibility study, literature survey and prepare a detailed project report during VI semesters

20MC6107A INNOVATION, IPR AND ENTREPRENEURSHIP

Course Category	Mandatory	Credits	0
Course Type	Theory	L-T-P	2-0-0
Prerequisites	20TP4106 English for Professionals	Continuous Eval Semester End Eval Total Marks	100 00 100

COURSE OUTCOMES

Upon successful completion of the course, the student will be able to:

- 1. Learn the innovation concepts related to business organizations.
- 2. Understand the importance of innovation in new start-ups.
- 3. Know fundamental aspects of Intellectual property Rights.
- 4. Learn the basic concepts of entrepreneurship and its benefits

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

COURSE CONTENT

UNIT I

Innovation Management: Introduction Innovation: Definition, Importance – The need to view innovation in an organizational context – Different types of innovation – Innovation and Invention – Popular views of innovation – Innovation as a management process.

UNIT II

Innovation: New Product Development (NPD) Innovation Management and New Product Development – Considerations when developing as NPD strategy - NPD as a strategy for growth – What is new product? –Classification of new products – NPD as an industry innovation cycle.
UNIT III

Intellectual Property Rights (IPR) Introduction and the need for intellectual property right (IPR) - Kinds of Intellectual Property Rights: Patent, Copyright, Trade Mark, Design, Geographical Indication, Plant Varieties and Layout Design – Genetic Resources and Traditional Knowledge – Trade Secret - IPR in India : Genesis and development.

UNIT IV

Entrepreneurship Concept and need of entrepreneurship - Characteristics and Types of Entrepreneurship -Entrepreneurship as a career - Entrepreneurship as a style of Management - The changing role of the entrepreneur - Entrepreneurial traits, factors affecting entrepreneurs.

TEXT BOOKS

- 1. APaul Trott, Innovation Management and New Product Development, Pearson Education Limited, UK, 2017.

SEMESTER VII

20AI&DS7301 AUTOMATA & COMPUTER DESIGN

Course Category	Program Core	Credits	3
Course Type	Theory	L-T-P	3-0-0
Prerequisites	20ES1103 Programming for problem solving	Continuous Eval Semester End Eval Total Marks	30 70 100

COURSE OUTCOMES

- 1. Understand the basic concepts of formal languages and finite automata techniques.
- 2. Apply the parsing techniques for the given programming construct described in Context Free Grammar.
- 3. Identify the suitable intermediate representation based on the storage administration
- 4. Generate the machine code by considering all the functionalities involved in different phases of the compilation process

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

4			5										5		0	3.2.1, 3.3.1

COURSE CONTENT

UNIT I

*Structure of Compiler:*Lexical Analysis, Syntax analysis, Intermediate Code generation, Code Optimization, Code generation, Bookkeeping, Error handling.

Formal Language and Regular Expressions:Languages, Definition Languages regular expressions, Finite Automata – DFA, NFA. Conversion of regular expression to NFA, NFA to DFA. Applications of Finite Automata to lexical analysis, lex tools. *Implementation of Lexical Analyzer (LTC)*

UNIT II

Context Free grammars and parsing: Context free grammars, derivations, parse trees, ambiguity, simplification of CFG, Normal Forms: CNF and GNF.

Top Down and Bottom up Parsing: LL(K) grammars and LL(1) parsing, Bottom up parsing, handle pruning, LR Parsing, parsing using ambiguous grammars. **Computing FIRST and FOLLOW terms (LTC)**

UNIT III

Syntax Directed Translation: S-attributed and L-attributed grammars, abstract syntax trees, Intermediate Code: types of intermediate code, Translation of simple assignment statements and control flow statements. Type checking, type conversions. Symbol Table: The contents of a symbol table, Data structures for symbol tables, Representing scope information. Generating Three address code (LTC)

UNIT IV

Storage organization: Storage allocation strategies, scope access to non local names, language facilities for dynamics storage allocation.

Code optimization: Principal sources of optimization, optimization of basic blocks, flow graphs, peephole optimization.

Code Generation: Issues in the design of a Code generator, The Target language, A simple code generator, Code generation from DAG's.

COURSE CONTENT

UNIT I

Classical Approaches: Introduction to image processing and medical imaging modalities, denoising and enhancement, Tissue and Cell Segmentation: clustering, active contours and level sets based approaches.

UNIT II

Medical Image alignment: rigid and deformable registration [5 Lectures] Machine Learning and Deep Learning Approaches: Fundus Image analysis, Retinal Vessel Segmentation

UNIT III

MRI image analysis and segmentation, 3D brain reconstruction from and MRI slices and analysis, Microscopic image analysis and interpretation

UNIT IV

Ultrasonography image analysis X-Ray and CT image segmentation, diagnosis and prognosis of various diseases, Correlation between different medical imaging modalties and conversions, augmenting clinical measurements with medical imaging modalities for diseases diagnosis and prognosis

4	1	2											1	2	3	1.7.1, 2.5.2, 2.6.3

COURSE CONTENT

UNIT I

Basics of Video Compression and Motion Analysis

Video Compression, Motion Segmentation, Optional Flow Methods, Applications **Background Modeling**

Background Modeling - Definition, Modeling Techniques – Non- Statistical & Statistical Background Modeling Methods, Shadow Detection and Removal

UNIT II

Video Object Tracking

Introduction, Kalman Filter, Region –based Tracking, Contour-Based Tracking, Feature –Based Tracking, Model – Based Tracking, KLT Tracker, Mean –Shift-Based Tracking, Applications of Tracking Algorithms

UNIT III

Camera Network for Surveillance

Types of CCTV Cameras, Smart Cameras, Smart Imagers, Multiple view geometry, Camera Network, Camera Calibration, Camera Placement, Camera Communication Multiple Camera Coordination and Cooperation

Surveillance Systems and Applications Introduction, Video Content Analytics, Baggage exchange detection, Fence- Crossing Detection, Military Applications, Transportation

UNIT IV

Multi-target Tracking in Video – Part -I

Introduction, Overview of MTTV Methods, State Model for Multi-target Approximate Inference, Fusing Information from Temporal and Bottom-up Detectors

Multi-target Tracking in Video - Part -II

Introduction, Overview of the MTTV Data Association Mechanism, The Generative model for MTT, Approximating the Marginal Term, Approximating the Interactive Term, Hybrid Measurement Process

COURSE CONTENT

UNIT I

Data Acquiring, Organizing, Processing and Analytics in IoT – Introduction, Data Acquiring and Storage, Organizing Data, Transactions, Business Processes, Integration and Enterprise Systems, Analytics, Analytics using Big Data in IoT/M2M, Knowledge Acquiring, Managing and Storing Processes.

UNIT II

IoT Analytics and Networking Protocols- Defining IoT Analytics, IoT Analytics Challenges, Business value concerns, IoT Devices, IoT networking Connectivity protocols-Bluetooth, 6LoWPAN, ZigBee, NFC, Wi-Fi, Cellular, IoT networking data messaging protocols- MQTT, HTTP, CoAP, DDS, analyzing data to infer protocol and device characteristics.

UNIT III

IoT Analytics for the Cloud: Building Elastic Analytics, Elastic Analytics Concepts, Scaling, Cloud Security and Analytics, AWS / Azure /Thing Worx overview, Designing data processing for analytics, Application of big data technology to storage, Exploring and visualizing data, solution for industry specific analysis problem.

UNIT IV

Visualization and Dashboarding –Exploring and visualizing data, techniques to understand data quality, basic time series analysis, solving industry specific analysis problems. Adding internal data sets, adding external datasets. Designing visual analysis for IoT data- creating dashboard – creating and visualizing alerts

COURSE CONTENT

UNIT I

The Importance of the User Interface : Defining the User Interface, The Importance of Good Design, A Brief History of the Human-Computer Interface, Introduction of the Graphical User Interface,

Characteristics of Graphical and Web User Interfaces: Interaction Styles, Command Line, Menu Selection, Form Fill-in, Direct Manipulation, Anthropomorphic; The Graphical User Interface, The Web User Interface, The Merging of Graphical Business Systems and the Web, Principles of User Interface Design.

UNIT II

The User Interface Design Process: Obstacles and Pitfalls in the Development Path, Usability, Important Human Characteristics in Design, Human Considerations in the Design of Business Systems.

Understand the Business Function: Determining Basic Business Functions, Design Standards or Style Guides.

Understand the Principles of Good Interface and Screen Design: Human Considerations in Interface and Screen Design.

UNIT III

Techniques for designing interactive systems: Understanding requirements, Participative design, Interviews, Questionaires, Probes, Card sorting techniques, Working with groups, Onsite working.

Environment: Basic techniques, Prototypes, Envisionment in practice. Design: Introduction, Conceptual design, Metaphors in design, Physical design.

UNIT IV

Agents and Avatars: Agents, Adaptive systems, An architecture for agents, Applications of agent-based interaction, Avatars and conversational agents Mobile and Wearable devices: Understanding in mobile computing, Designing for mobiles, Evaluation for mobile computing, Smart materials, Material design.

TEXTBOOKS

- 1. Wilbert O Galitz, The Essential Guide to User Interface Design, 2 ed, Wiley Dreamatech [UNIT I,II]
- 2. David Benyon "Designing Interactive Systems: A Comprehensive Guide to HCI, UX and Interaction Design"3rd ed. Addison Wesley, 2013, [UNIT III, IV]

20AI&DS7402F MINING OF MASSVIE DATASETS

Course Category	Program Elective III	Credits	3
Course Type	Theory	L-T-P	3-0-0
Prerequisites	20AI&DS6301: Big Data Analytics	Continuous Eval Semester End Eval Total Marks	30 70 100

COURSE OUTCOMES

- 1. Understand fundamentals of data mining.
- 2. Apply the concept of Map reduce and data streams for storing and processing of massive data sets
- 3. Analyze the different algorithms frequent item sets
- 4. Analyze different clustering algorithms and analyze various decomposition techniques

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

COURSE CONTENT

UNIT I

Data Mining: Introduction, Statistical Modeling, Machine Learning, Computational Approaches to Modeling, Feature Extraction, Statistical Limits on Data Mining, Hash Functions, Indexes, Natural Logarithms, Power Laws. **UNIT II** Map Reduce and the New Software Stack: Distributed File Systems, Map Reduce, Algorithms Using MapReduce, Extensions to MapReduce, Complexity Theory for MapReduce. Mining Data Streams: The Stream Data Model, Sampling Data in a

Stream, Filtering Streams, Counting Distinct Elements in a Stream, Counting Ones in a Window, Decaying Windows

UNIT III

Frequent Item sets: The Market-Basket Model, Market Baskets and the A-Priori Algorithm, Handling Larger Datasets in Main Memory, Limited-Pass Algorithms, Counting Frequent Items in a Stream

UNIT IV

Clustering: Introduction to Clustering Techniques, Hierarchical Clustering, K-means Algorithms, The CURE Algorithm, Clustering in Non-Euclidean Spaces, and Clustering for Streams and Parallelism. Dimensionality Reduction: Eigen values and

Eigenvectors of Symmetric Matrices, Principal-Component Analysis, Singular-Value Decomposition, CUR Decomposition

20AI&DS7403A INDUSTRIAL AND MEDICAL IoT

Course Category	Program Elective IV	Credits	3
Course Type	Theory	L-T-P	3-0-0
Prerequisites	_	Continuous Eval Semester End Eval Total Marks	$30 \\ 70 \\ 100$

COURSE OUTCOMES

- 1. Understand the basics of Industrial IOT and Medical IOT
- 2. Identify the technical and industrial requirement procedures for IIOT applications
- 3. Develop various applications using IIOT architectures
- 4. Analyze privacy and security measures for industry and medical standard solutions

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

COURSE CONTENT

UNIT I

Introduction to Industrial IoT: Technical requirements, IoT background-History and definition, IoT enabling factors, IoT applications, IoT key technologies, I-IoT, IoT and I-IoT – similarities and differences, Industry environments and scenarios covered by I-IoT.

UNIT II

Understanding the Industrial Process and Devices Technical requirements: The industrial process-Automation in the industrial process, Control and measurement systems, Types of industrial processes.

UNIT III

Industrial Data Flow and Devices : Technical requirements, The I-IoT data flow in the factory , Measurements and the actuator chain .Sensors , The converters - Digital to analogical , Analog to digital, Actuators, Controllers - Microcontrollers, Embedded microcontrollers , Microcontrollers with external memory, DSP's. Industrial protocols -Automation networks, The fieldbus, Developing Industrial IoT and ArchitectureIntroduction to the I-IoT platform and architectures, OSGi, micro service, containers, and server less computing, The standard IIoT flow.

UNIT IV

Internet of Medical Things Introduction and system architecture: Introduction, IoMT Devices-On-Body Devices, InHome Devices, Community Devices, In-Clinic Devices, InHospital Devices, IoMT System Architecture-Data Collection Layer, Data Management Layer, Medical Server Layer. Internet of Medical Things Security Threats, Security Challenges and Potential Solutions: IoMT Attack Types, Challenges in IoMT Security Schemes, Current Security Plans for IoMT, Potential Solutions for Security Vulnerabilities.

TEXTBOOKS

20AI&DS7403B REMOTE SENSING DATA ANALYTICS

Course Category	Program Elective IV	Credits	3
Course Type	Theory	L-T-P	3-0-0
Prerequisites	20AI&DS6301: Big Data Analytics	Continuous Eval Semester End Eval Total Marks	30 70 100

COURSE OUTCOMES

- 1. Understanding basic components of remote Sensing
- 2. Understand the feature reduction strategies for remote sensing data
- 3. Understand various supervised classification techniques for remote sensing data
- 4. Understand various un supervised classification techniques for remote sensing data

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

COURSE CONTENT

UNIT I

INTRODUCTION TO REMOTE SENSING: Definition of Remote Sensing, Data, Remote Sensing Process, Source of Energy, Interaction with Atmosphere, Interaction with Target, Recording of Energy by Sensor, Transmission-Reception and Processing, Interpretation and Analysis **Types of Remote Sensing and Sensor Characteristics:** Introduction, Types of remote sensing, Characteristics of images, Remote Sensing Satellites, Sensor Resolutions, Unmanned Aerial Vehicle based Remote Sensing

UNIT II

Platforms and Sensors: Orbital movement and Earth coverage. Sun-synchronous

and Geosynchronous satellites, Active and passive sensors, PAN, Multi High resolution and Hyper spectral Sensors, Thermal and Microwave sensors, Sensors characteristics. *Satellites and their Specifications:* LANDSAT, Pleiades, SPOT5/6/7, EN-VISAT, WorldView, Quickbird, GeoEye, Sentinel-1/2, ASTER, RADARSAT, IRS, IKONOS, Cartosat etc.Referencing scheme of satellite system (path/row calculation).

UNIT III

Applications of Remote Sensing: Introduction, Lanuse Lancover Mapping, Geologic and Soil mapping, Agricultural applications, Forestery applications, water resource applications, urban and regional planning applications, wetland mapping, wildlife ecology **Digital image analysis:** Introduction, preprocessing of images, image enhancement, contrast manipulation, spatial feature manipulation **Supervised Classification Techniques:** Gaussian Mixture Models, Minimum Distance Classification: The Case of Limited Training Data, Parallelepiped Classification, Mahalanobis Classification Non-Parametric Classification: Table Look Up Classification, Non-Parametric Classification from a Geometric Basis, Training a Linear Classification , Multi-Category Classification with Binary Classifiers, Spatial Context Classification

UNIT IV

Clustering and Unsupervised Classification: How Clustering is Used, Similarity Metrics and Clustering Criteria , k Means Clustering , The k Means Algorithm, Isodata Clustering: Merging and Deleting Clusters , Splitting Elongated Clusters , Choosing the Initial Cluster Centres , Unsupervised Classification , An Example of Clustering with the k Means Algorithm , Hierarchical Clustering: Agglomerative Hierarchical Clustering, Other Clustering Metrics , Other Clustering Techniques , Cluster Space Classification

TEXTBOOKS

20AI&DS7403C CYBER SECURITY AND LAWS

Course Category	Program Elective IV	Credits	3
Course Type	Theory	L-T-P	3-0-0
Prerequisites	20AI&DS5404C: Cryptography and Network Security	Continuous Eval Semester End Eval Total Marks	$30 \\ 70 \\ 100$

COURSE OUTCOMES

- 1. Understand the basics of internet security and securing data
- 2. Apply and use the basic and network monitoring tools for the given scenario
- 3. Understand the internet regulations and intellectual property
- 4. Understand the business laws, cyberthreats, and emerging issues in cyber law

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

CO	РО											PS	SO	Ţ	DOI

4	2	3	1										1	1	2	1.7.1, 2.5.1, 3.5.1

COURSE CONTENT

UNIT I

Understanding the Environment: The Basics of Internet Security, Basic Internet Concepts, Internet Services, Standards and RFCs. **Protecting the Perimeter:** Understanding the Perimeter, Firewalls, Network Appliances, Proxy Servers, Demilitarized Zones, Honeypots, Extranets. **Protecting Data Moving through the Internet:** Securing Data in Motion – Authentication, Encryption, Cryptography - Digital Certificates, Hash Tables, Cookies, CAPTCHAs, Virtual Private Networks.

UNIT II

Tools and Utilities: Using Basic Tools – IFconfig/Ipconfig, Whois, Nslookup, PING, Traceroute, Telnet, Secure Shell. Monitoring Tools and Software – Nagios, SolarWinds, Microsoft Network Monitor, Wireshark, Snort, Nmap, Nikto, OpenVAS, Metasploit, The Browser Exploitation Framework (BeEF). *Identifying and Defending Against Vulnerabilities:* Zero Day Vulnerabilities, Software Exploits, Social Engineering Exploits, Network Threats and Attacks, Dictionary Attacks, Denial of Service (DoS) Attacks, Spam, Other Exploits.

UNIT III

Making of Internet Regulations: Laws, Cyber Lawmaking in America, Challenges to Internet Lawmaking, Cyber Ethics. Digital Privacy: Privacy Protections – Public Disclosure of Private and Embarrassing Facts, False Light, Misappropriation, Intrusion, Other Privacy Laws, Privacy Problems – Outdated Laws, Government Surveillance, Private Surveillance, Comparative Law, The Price of Privacy. Intellectual Property: Copyright – What Can Be Copyrighted, What is Not Protected, How Long Does Copyright Last, How to Copyright Your Work, Who Owns a Copyright, Contributory Infringement, Streaming, Fair Use: An Important Exception, Other Copyright Exceptions, Penalties for Copyright Infringement, Copyright vs. Plagiarism. Other IP Laws – Patent Law, Trademark Law, Trade Secrets, International Intellectual Rights.

UNIT IV

Online Business and the Law: Anti-Trust Laws, E-Contracts, Taxes, Advertising, Data Protection, ADA Compliance, Online Reviews, International E-Commerce Laws, Intellectual Property. **Cyberthreats:**Cybercrime – Criminal Law Explained, Cybercrime Laws – Hacking, Cell Phone Fraud, Wire Fraud, Money Laundering, Cybersex Crimes, Spam, Piracy, Identity Theft, Data Security Laws – Challenges of Fighting Cybercrime, Cyberwarfare. **Emerging Issues in Cyber Law:** Artificial Intelligence, Cyborgs, Cryptocurrency, Sharing Economy, U.S.–China Tech War, Climate Change, Staying Informed.

20AI&DS7403D REAL TIME DATA ANALYTICS FOR DRONES

Course Category	Program Elective IV	Credits	3
Course Type	Theory	L-T-P	3-0-0
Prerequisites	20AI&DS6301: Big Data Analytics	Continuous Eval Semester End Eval Total Marks	$30 \\ 70 \\ 100$

COURSE OUTCOMES

- 1. Understand the foundations of remote sensing, photogrammetry, drone common sensors, and drone images collection and processing.
- 2. Understand how to arrange a fly and use aerial cinematography techniques.
- 3. Apply augmented reality to applications such as 3D surface modeling.
- 4. Analyze non imagery, atmospheric data for different case studies.

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

COURSE CONTENT

UNIT I

Introduction to Capturing and Processing Drone Imagery and Data Introduction, Drone Terminology, Flying and Safe Operations, Platforms, Fixed-Wing Platforms, Rotary-Wing Platforms, Which Platform to Choose?, Payload, Cameras and Non-imagery Sensors, Drone Applications, Agriculture, Wildlife Surveys, Geomorphology, Historical and Cultural Heritage Preservation, Atmospheric Studies, Other Applications, Ethics and Privacy

An Introduction to Drone Remote Sensing and Photogrammetry Introduction, Remote Sensing with Drones, A Brief History of Aerial Photography and Photogrammetry, General Considerations for Capturing Images with Drones, Radiometric Errors and Effects, Radiometric Correction, Geometric Errors and Effects Georeferencing and Geometric Correction, Doming and Dishing, Data Products Derived from Drone Images Georeferenced Point Clouds, Digital Elevation Models, Orthophotos and Orthomosaics, Image Enhancement and Classification

Choosing a Sensor for UAS Imagery Collection Introduction, Passive and Active Sensors, Sensor Characteristics, Geometric Camera Calibration, Radiometry and Radiometric Calibration, Common Passive Sensors Used with Drones

Mission Planning for Capturing UAS Imagery Introduction, Defining Product Specifications and Accuracy Requirements, Researching Operational Site Restrictions, Selecting an Imaging Sensor and Computing Image Geometry - The Digital Sensor (Camera), Geometry of Vertical Imagery, Planning Aerial Imagery Collection, Estimating Costs and Developing a Delivery Schedule, Solution to Design a Flight Plan and Layout

UNIT II: Text Classification

Structure from Motion (SfM) Workflow for Processing Drone Imagery Introduction, Image Processing with Structure from Motion (SfM) - Georeferencing , Multi-View Stereo, Data Products, SfM Considerations , Image Capture Camera Calibration, Image Characteristics - Multispectral and Hyperspectral Imaging Data , Software, Applications

Aerial Cinematography with UAS Introduction, Quantitative Mapping versus Qualitative Videos, Geographic Communication with Aerial Cinematography, Abstracted Views and Phantom Rides, Communicating through UAS Aerial Cinematography, Planning and Executing a Successful UAS Aerial Cinematography Mission - Selecting a Platform and Accessories, Techniques for Capturing Great Videos, Example Applications for UAS Aerial Cinematography

Planning Unoccupied Aircraft Systems (UAS) Missions Introduction, Learning Objectives, Hardware and Software Requirements, Overview of Mission Planner - Downloading and Installing Mission Planner, Navigating Mission Planner Mission Planning in a Familiar Landscape Case study - Exploring the Area of Interest, Defining the Boundaries of the Area of Interest, Creating the UAS Mission Mission Planning for the Unfamiliar Landscape Case study - Exploring the Area of Interest, Defining a UAS Mission within an Area of Interest, Creating the UAS Mission

Aligning and Stitching Drone-Captured Images Learning Objectives, Hardware and Software Requirements, Introduction, Workflow for Stitching Drone-Captured Images, General Considerations for High-Quality Image Stitching, Counting Wildlife from Drone-Captured Imagery Using Visual and Semi Automated Techniques Case Study

UNIT III: Text Clustering, Matrix decompositions and latent semantic indexing

Terrain and Surface Modeling of Vegetation Height Using Simple Linear Regression Introduction, Hardware and Software Requirements, Datasets Case Study - Developing a Digital Elevation Model (DEM), Building the SfM Point Cloud, Classifying Ground Points for the SfM Point Cloud, Creating a DEM Using Classified Ground Points, Mapping Vegetation Height Using 3D Data, Importing SfM Points into a GIS and Calculating Their Height above Ground, Associating PLOT ID with SfM Points and Calculating Height Metrics, Performing Simple Linear Regression and Applying Height Estimate Models to the Entire Study Area

Assessing the Accuracy of Digital Surface Models of an Earthen Dam Derived from SfM Techniques Introduction, Hardware and Software Requirements, Study Area and Data Collection Case Studies- Part 1: Evaluating 3D Model Accuracy Using Only the Geotagged Images, Evaluate the Accuracy of a 3D Model Derived from Flight 1, Evaluate the Accuracy of a 3D Model Derived from Flight 2 and Flight 3 Part 2: Evaluating the Impact of GCP Density and Distribution on DSM Accuracy, Evaluate the Vertical Accuracy of the DSM Generated Using Flights 2 and 3 with a Variable Number of GCPs

Estimating Forage Mass from Unmanned Aircraft Systems in Rangelands H Introduction, Hardware and Software Requirements, Study Area Case Study- Part 1: Processing UAS Imagery into a DSM and Orthomosaic, Part 2: Linear Regression: Volumes and Forage Mass, Part 3: Forage Mass Estimation

Applications of UAS-Derived Terrain Data for Hydrology and Flood Hazard Modeling Introduction, Hardware and Software Requirements, Study Area Case Study - Part 1: Getting to Know the Terrain and Hydrology of the Study Area, Visualize and Examine Digital Elevation Models of the Study Area, Analyze Terrain with Neighborhood Functions, Investigate the Hydrology of the Study Area, Modeling Flood Hazard with Drone Data, Load UAS Terrain Data into HEC-RAS Model Flow Area Setup, Modeling Unsteady Flow, Visualizing the Modeling Results

UNIT IV: Web Information Retrieval

Comparing UAS and Terrestrial Laser Scanning Methods for Change Detection in Coastal Landscapes Objectives and Key Concepts ,Introduction, Coastal Foredune Systems ,Using UAS SfM-MVS and TLS Datasets for Terrain Mapping, Geomorphic Change Detection (GCD), Case study

Digital Preservation of Historical Heritage Using 3D Models and Augmented Reality Introduction, Hardware and Software Requirements, Datasets, Considerations when Capturing Drone Imagery for Digital Preservation, Regulations and Sensitivities, Representation of Area of Interest, Time of Data Acquisition, Camera Angle, Historical Context: The Old Athens Cemetery, Case study

Detecting Scales of Drone-Based Atmospheric Measurements Using Semivariograms Introduction, Hardware and Software Requirements, Datasets ,Traditional Atmospheric Measurement Technologies, Using Drones to Collect Atmospheric Measurements, Spatial Statistics and Geostatistics, Spatial Dependence and the Semivariogram, Data and Code, Computing a Sample Variogram and Fitting a Model, Analyzing Scale Changes in Different Atmospheric SituationsAssessing the Greenhouse Gas Carbon Dioxide in the Atmospheric Boundary Layer

20AI&DS7403E GPU ARCHITECTURE AND PROGRAMMING

Course Category	Program Elective IV	Credits	3
Course Type	Theory	L-T-P	3-0-0
Prerequisites	20AI&DS5404D: MicroProcessor and Microcontrollers	Continuous Eval Semester End Eval Total Marks	$30 \\ 70 \\ 100$

COURSE OUTCOMES

- 1. Understand GPU computing architecture
- 2. Apply CUDA concepts for solving real world applications
- 3. Apply the concepts to identify parallel programming patterns to solve problems
- 4. Develop efficient algorithms in GPUs for common application kernels, such as matrix multiplication

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

COURSE CONTENT

UNIT I GPU ARCHITECTURE

Evolution of GPU architectures – Understanding Parallelism with GPU –Typical GPU Architecture – CUDA Hardware Overview – Threads, Blocks, Grids, Warps, Scheduling – Memory Handling with CUDA: Shared Memory, Global Memory, Constant Memory and Texture Memory.

UNIT II CUDA PROGRAMMING

Using CUDA – Multi GPU – Multi GPU Solutions – Optimizing CUDA Applications:

UNIT III PROGRAMMING ISSUES

Common Problems: CUDA Error Handling, Parallel Programming Issues, Synchronization, Algorithmic Issues, Finding and Avoiding Errors, Developing for Future GPUs

UNIT IV OPENCL BASICS

OpenCL Standard – Kernels – Host Device Interaction – Execution Environment – Memory Model – Basic OpenCL Examples. Parallel Patterns: Convolution, Prefix Sum, Sparse Matrix – Matrix Multiplication – Programming Heterogeneous Cluster.

TEXTBOOKS

- 1. Shane Cook, CUDA Programming: —A Developer's Guide to Parallel Computing with GPUs (Applications of GPU Computing), First Edition, Morgan Kaufmann, 2012.

20AI&DS7403F TIME SERIES ANALYSIS AND TEXT MINING

Course Category	Program Elective IV	Credits	3
Course Type	Theory	L-T-P	3-0-0
Prerequisites	20BS3101E – Discrete Mathematics for Data Science 20BS4101 – Numerical Methods for Data Analysis	Continuous Eval Semester End Eval Total Marks	30 70 100

COURSE OUTCOMES

- 1. Apply univariate stationary processes on time-series data.
- 2. Understand autoregressive and stationary algorithm approaches to perform time series analysis.
- 3. Apply text extraction, multilingual document clustering and novelty mining on textual data.
- 4. Understand events and trends in text streams, semantics embedding and different K-mean clustering techniques.

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

COURSE CONTENT

UNIT I

Introduction: Graphical Representations of Time Series, Ergodicity and Stationarity, World Decomposition.

Univariate Stationary Processes: Autoregressive Processes: First Order and second order Autoregressive Processes, Moving Average Processes: First Order and

UNIT II

(p, q) Processes.

Vector Autoregressive Processes: Representation of the System, Granger Causality, Impulse Response Analysis, Variance Decomposition

Nonstationary Processes: Forms of Nonstationary, Trend elimination, Unit Root Tests: Dickey-Fuller Tests, Decomposition of Time Series.

Autoregressive Conditional Heteroskedasticity: ARCH Models, Generalized ARCH Models

UNIT III

Text Extraction: Rapid automatic keyword extraction, benchmark evaluation, stoplist generation, evaluation on news articles: MPQA Corpus, keyword extraction. **Multilingual Document Clustering:** Multilingual LSA, Tucker 1 method, PARAFAC2 method, Latent morpho-semantic analysis (LMSA).

Novelty Mining: Adaptive threshold setting, Gaussian-based adaptive threshold setting.

UNIT IV

Text streams: Introduction, feature extraction and data reduction, event detection, trend detection, Event and trend descriptions, sematic vector space model, latent semantic analysis, probabilistic latent semantic analysis.

Clustering: Classical k-means clustering, Constrained k-means with Bregman divergences, constrained spherical k-means clustering

20AI&DS7403H AGILE PROJECT MANAGEMENT

Course Category	Open Elective IV	Credits	3
Course Type	Theory	L-T-P	2-0-2
Prerequisites	20AI&DS6303: Software Engineering	Continuous Eval Semester End Eval Total Marks	$30 \\ 70 \\ 100$

COURSE OUTCOMES

- 1. Understand the purpose of planning.
- 2. Understand the Scrum development process and agile development principles
- 3. Apply estimation techniques in agile projects.
- 4. Analyze user stories for estimating an agile project.

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

4		5													4	2.7.1, 5.4.1

COURSE CONTENT

UNIT I

Purpose of planning: What Makes a Good Plan, What Makes Planning Agile, Why Planning Fails, Planning Is By Activity Rather Than Feature, Multitasking Causes Further Delays, Features Are Not Developed By Priority, Estimates Become Commitments.

UNIT II

An Agile Approach: An Agile Approach To Projects, An Agile Approach to Planning **Estimating Size:** Estimating Size with Story points, Story Points Are Relative, Velocity, Estimating in ideal days, Ideal Time and Software Development, Ideal Days As A Measure of Size, One Estimate, not Many.

UNIT III

Techniques for Estimating: Estimates Are Shared, The Estimation Scale, Deriving An Estimate, Planning Poker, Re-Estimating, Swim Stats Website, When Not To Re-Estimate, When To Re-Estimate, Re-Estimating Partially Completed Stories, The Purpose of Re-Estimating.

UNIT IV

Estimating User Stories: Story Points, Estimate as a Team ,Estimating Triangulate Using Story Points , What If We Pair Program, Planning a Release, Planning an Iteration.

20AI&DS7404A COMPUTER VISION

Course Category	Open Elective V	Credits	3
Course Type	Theory	L-T-P	2-0-2
Prerequisites	Digital image processing fundamentals	Continuous Eval Semester End Eval Total Marks	$30 \\ 70 \\ 100$

COURSE OUTCOMES

- 1. Understand the concepts and techniques in computer vision and image processing.
- 2. Apply computer vision and image processing algorithms to solve real world problems
- 3. Apply segmentation techniques to the images and perform Pattern analysis.
- 4. Develop applications using computer vision techniques.

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

COURSE CONTENT

UNIT I: IMAGE PROCESSING FOUNDATIONS

Image processing techniques - classical filtering operations - thresholding techniques - edge detection techniques - corner and interest point detection - mathematical morphology - texture.

UNIT II: IMAGE FORMATION AND PROCESSING

Overview and State-of-the-art, Fundamentals of Image Formation, Transformation: Orthogonal, Euclidean, Affine and Projective. Fourier Transform, Convolution and Filtering, Image Enhancement, Restoration, Histogram Processing

UNIT III: FEATURE EXTRACTION

Edges - Canny, LOG, DOG; Line detectors (Hough Transform), Corners - Harris
and Hessian Affine, Orientation Histogram, SIFT, SURF, HOG, GLOH, Scale-Space Analysis- Image Pyramids and Gaussian derivative filters, Gabor Filters and DWT. **IMAGE SEGMENTATION** Region Growing, Edge Based approaches to segmentation, Graph-Cut, Mean-Shift, MRFs, Texture Segmentation; Object detection.

UNIT IV: PATTERN ANALYSIS

Clustering: K-Means, K-Medoids, Mixture of Gaussians, Classification: Discriminant Function, Supervised, Un-supervised, Semi-supervised; Classifiers: Bayes, KNN, ANN models; Dimensionality Reduction: PCA, LDA, ICA; Non-parametric methods. **APPLICATIONS**

Surveillance – foreground-background separation – particle filters – Chamfer matching, tracking, and occlusion – combining views from multiple cameras In-vehicle vision system: locating roadway – road markings – identifying road signs – locating pedestrians.

20AI&DS7404B SENTIMENT ANALYSIS AND OPINION MINING

Course Category	Open Elective V	Credits	3
Course Type	Theory and Practice	L-T-P	2-0-2
Prerequisites	20AI&DS5302: Machine Learning	Continuous Eval Semester End Eval Total Marks	30 70 100

COURSE OUTCOMES

- 1. Understand different approaches to document sentiments and classifications
- 2. Apply different opinion techniques to real time problems
- 3. Analyze the opinion results on different services
- 4. Apply different opinion spam detection methods

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

COURSE CONTENT

UNIT I

Sentiment Analysis: A Fascinating Problem, Sentiment Analysis Applications, Sentiment Analysis Research, Different Levels of Analysis, Sentiment Lexicon and Its Issues, Natural Language Processing Issues, Opinion Spam Detection.

The Problem of Sentiment Analysis: Problem Definitions, Opinion Definition, Sentiment Analysis Tasks, Opinion Summarization, Different Types of Opinions, Regular and Comparative Opinions, Explicit and Implicit Opinions.

Document Sentiment Classification: Sentiment Classification Using Supervised Learning, Sentiment Classification Using Unsupervised Learning, Sentiment Rating

Prediction Cross-Domain, Sentiment Classification Cross-Language Sentiment Classification.

UNIT II

Sentence Subjectivity and Sentiment Classification: Sentiment Analysis and Opinion Mining, Subjectivity Classification. Subjectivity Classification, Sentence Sentiment Classification, Dealing with Conditional Sentences, Dealing with Sarcastic Sentences, Cross-language Subjectivity and Sentiment Classification, Using Discourse Information for Sentiment Classification.

Aspect-based Sentiment Analysis: Aspect Sentiment Classification, Basic Rules of Opinions and Compositional Semantics **Aspect Extraction** Finding Frequent Nouns and Noun Phrases Using Opinion and Target Relations Using Supervised Learning Using Topic Models Mapping Implicit Aspects Identifying Resource Usage Aspect Simutaneous Opinion Lexicon Expansion and Aspect Extraction Grouping Aspects into Categories Entity, Opinion Holder and Time Extraction Co-reference Resolution and Word Sense Disambiguation

UNIT III

Sentiment Lexicon Generation: Dictionary-based Approach, Corpus-based Approach, Desirable and Undesirable Facts Opinion Summarization, Aspect-based Opinion Summarization, Improvements to Aspect-based Opinion Summarization, Contrastive View Summarization Traditional Summarization.

Analysis of Comparative Opinions Problem Definitions Identify Comparative Sentences Identifying Preferred Entities.

Opinion Search and Retrieval: Web Search vs. Opinion Search, Existing Opinion Retrieval Techniques

UNIT IV

Opinion Spam Detection: Types of Spam and Spamming, Harmful Fake Reviews, Individual and Group Spamming Types of Data Features and Detection, Supervised Spam Detection.

Unsupervised Spam Detection: Spam Detection based on Atypical Behaviors, Spam Detection Using Review Graph Group Spam Detection.

Quality of Reviews: Quality as Regression Problem Other Methods.

COURSE CONTENT

UNIT I

Overview of Web Applications

Introduction history of web applications interface ad structure benefits and drawbacks of web applications, Web application Vs Cloud application.

Web Application Security Fundamentals

Security Fundamentals: Input Validation - Attack Surface Reduction Rules of Thumb-Classifying and Prioritizing Threads

Browser Security Principles Origin Policy-Exceptions to the Same-Origin Policy-Cross-Site Scripting and Cross-Site Request Forgery-Reflected XSS-HTML Injection

UNIT II

Web Application Vulnerabilities Understanding vulnerabilities in traditional client server application and web applications, client state manipulation, cookie based attacks, SQL injection, cross domain attack (XSS/XSRF/XSSI) http header injection. SSL vulnerabilities and testing - Proper encryption use in web application - Session vulnerabilities and testing - Cross-site request forgery

Web Application Mitigations Http request , http response, rendering and events , html image tags, image tag security, issue, java script on error , Javascript timing , port scanning , remote scripting , running remotecode, frame and iframe , browser sandbox, policy goals, same origin policy, library import, domain relaxation

UNIT III

Introduction to Database Security: Introduction to Databases Security Problems in Databases Security Controls Conclusions

Security Models 1 Introduction Access Matrix Model Take-Grant Model Acten Model PN Model Hartson and Hsiao's Model Fernandez's Model Bussolati and Martella's Model for Distributed databases

UNIT IV

 $Security\ Models\ 2$ - Bell and LaPadula's Model Biba's Model Dion's Model Sea View Model Jajodia and Sandhu's Model The Lattice Model for the Flow Control conclusion

Security Mechanisms Introduction User Identification/Authentication Memory Protection Resource Protection Control Flow Mechanisms Isolation Security Functionalities in Some Operating Systems Trusted Computer System Evaluation Criteria

COURSE CONTENT

UNIT I

ELECTRONIC COMMERCE

Traditional commerce and E-commerce – The Dimensions of E-Commerce – E- Commerce Business Models – E-Commerce information System Function Model

MOBILE COMMERCE Introduction – Infrastructure of M– Commerce – Types Of Mobile Commerce Services – Technologies Of Wireless Business – Benefits And Limitations, Support, Mobile Marketing Advertisement, Non– Internet Applications In M– Commerce – Wireless/Wired Commerce Comparisons.

UNIT II

M COMMERCE: TECHNOLOGY

Mobile Clients: Types – Device limitations – Device location technology Mobile Client Software: Mobile Device Operating System – Micro Browsers – Mobile Device Communication protocols: WAP, Client Side – Server side – WAP, i-Mode – Page Description languages – application Software

WIRELESS COMMUNICATION TECHNOLOGY: Wireless widearea network Technology: Cellular Systems – 2G(CDMA, TDMA, GSM)– 2.5G(GPRS, EDGE) – 3G(UMTS, CDMA-2000) – 4G – Wireless LAN (Wi-fi) – WMAN (wi-max) – WPAN(Bluetooth).

UNIT III

APPROACHES TO SAFE ELECTRONIC COMMERCE: Secure transport Protocols, Secure Transactions, Secure Electronic Payment Protocol (SEPP), Secure Electronic Transaction (SET)

ELECTRONIC CASH AND ELECTRONIC PAYMENT SCHEMES: Introduction, Internet Monetary Payment & Security Requirements. Payment and Purchase Order Process, On-line Electronic cash.

MASTER CARD/VISA SECURE ELECTRONIC TRANSACTION: Introduction, Business Requirements, Concepts, payment Processing.

UNIT IV

ADVERTISING ON INTERNET: Issues and Technologies. Introduction, advertising on the Web, Marketing, Electronic Publishing Issues, Approaches and Technologies: EP and web based EP

M-COMMERCE ISSUES Technology Issues – Mobile Client Issues – Communication infrastructure Issues – other technology Issues – Application issues – Global m-Commerce issues

TEXTBOOKS

1. Norman Sadeh, "M-Commerce Technologies, Services and Business Models" Wiley publications, 2002.

20AI&DS7404G REINFORCEMENT LEARNING

Course Category	Program Elective V	Credits	3
Course Type	Theory	L-T-P	3-0-0
Prerequisites	20AI&DS5302: Machine Learning	Continuous Eval Semester End Eval Total Marks	30 70 100

COURSE OUTCOMES

- 1. Understand the basics of reinforcement learning. Its elements and limitations.
- 2. Understand the finite Markov decision process.
- 3. Understand value functions as a general-purpose tool for optimal decision making
- 4. Analyze dynamic programming concepts as an efficient solution approach to real worls problems

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

COURSE CONTENT

UNIT I

Introduction to RL: The Reinforcement Learning Problem, Examples, Elements of Reinforcement Learning, Limitations and Scope, An Extended Example: Tic-Tac-Toe

Multi-arm Bandits : An n-Armed Bandit Problem, Action-Value Methods, Incremental Implementation, Tracking a Nonstationary Problem, Optimistic Initial Values, Upper-Confidence-Bound Action Selection, Gradient Bandits

UNIT II

Finite Markov Decision Processes: The Agent-Environment Interface, Goals

UNIT III

Monte Carlo Methods: Monte Carlo Prediction, Monte Carlo Estimation of Action Values, Monte Carlo Control, Monte Carlo Control without Exploring Starts, Off-policy Prediction via Importance Sampling, Incremental Implementation, Off-Policy Monte Carlo Control, Importance Sampling on Truncated

Temporal-Difference Learning: TD Prediction, Advantages of TD Prediction Methods, Optimality of TD(0), Sarsa: On-Policy TD Control, Q-Learning: Off-Policy TD Control

UNIT IV

Policy Based Reinforcement Learning: Policy Gradient and Actor-Critic Methods — REINFORCE Algorithm and Stochastic Policy Search, Vanilla Policy Gradient(VPG), Asynchronous Advantage Actor-Critic (A3C), Generalized Advantage Estimation (GAE), Advantage Actor-Critic(A2C), Deep Deterministic Policy Gradient (DDPG), Twin-Delayed DDPG (TD3), Soft Actor-Critic (SAC), proximal policy optimization (PPO).

20AI&DS7607 CORPORATE READINESS SKILLS

Course Category	Advanced Skill Course	Credits	1.5
Course Type	Lab	L-T-P	1-0-2
Prerequisites	_	Continuous Eval Semester End Eval Total Marks	30 70 100

COURSE OUTCOMES

- 1. Understand required Life long Skills & Job skills and make them Industry ready
- 2. Develop interpersonal skills, like conflict resolution, teamwork, and respect for diversity
- 3. Develop skills to face interviews confidently
- 4. Analyze various career paths and to choose one path

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

CO							PO	PSO		Ľ	DOI					
00	1	2	3	4	5	6	7	8	9	10	11	12	1	2	B	I OI
1	2	2	2	2	2				2		2	2	2	2	2	
2	2	2	2	2	2				2		2	2	2	2	5	
3	2	2	2	2	2				2		2	2	2	2	5	
4	2	2	2	2	2				2		2	2	2	2	4	

Personal Qualities and Abilities

- 1. Demonstrate creativity and innovation.
- 2. Demonstrate critical thinking and problem-solving.
- 3. Demonstrate initiative and self-direction.
- 4. Demonstrate integrity.
- 5. Demonstrate work ethic.

Interpersonal Skills

- 1. Demonstrate conflict-resolution skills.
- 2. Demonstrate listening and speaking skills.
- 3. Demonstrate respect for diversity.
- 4. Demonstrate customer service skills.
- 5. Collaborate with team members.

Professional Competencies

- 1. Demonstrate big-picture thinking.
- 2. Demonstrate career and life-management skills.
- 3. Demonstrate continuous learning and adaptability.

- 4. Manage time and resources.
- 5. Demonstrate information-literacy skills.
- 6. Demonstrate an understanding of information security.
- 7. Maintain working knowledge of current information-technology (IT) systems.
- 8. Demonstrate proficiency with technologies, tools, and machines common to a specific occupation.
- 9. Apply mathematical skills to job-specific tasks.
- 10. Demonstrate professionalism.
- 11. Demonstrate reading and writing skills.
- 12. Demonstrate workplace safety.

TEXTBOOKS

- 1. Abhijit Guha, Quantitative Aptitude for Competitive Examinations, Tata Mc-Graw Hill, 5th Edition

20AI&DS7551 MINI PROJECT - II

Course Category	Project	Credits	1.5
Course Type	Internship/Project	L-T-P	0-0-3
Prerequisites	20AI&DS6554: Mini Project I	Continuous Eval Semester End Eval Total Marks	100 00 100

COURSE OUTCOMES

- 1. Formulate Domain Analysis, Elaboration through Modeling and Implementation through state of the art technology available.
- 2. Develop generic and modular programs that includes Handling exceptional cases in providing reliable solutions
- 3. Testing and verification of programs for different scenarios
- 4. Conclude findings through oral presentations
- 5. Prepare proper documentation consisting of Software Requirements Specification (SRS), Modeling Techniques, Development Strategies, Implementation and Testing Strategies, use any Design Methodologies such as SSAD, OOAD and UML
- 6. Builds the spirit of team work in design process.
- 7. Become proficient in the programming languages

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)

6								2	2	2	2	2	2	2	4	
7		2	2		2						2	2	2	2	4	

COURSE CONTENT

Note: Industrial/Research Internship six weeks (Mandatory) during summer vacation. The student should undergo internship and parallelly he/she should work on a project with well-defined objectives. A student shall also be permitted to submit project report on the work carried out during the internship. At the end of the VII semester the candidate shall submit an internship completion certificate and a project report.

SEMESTER VIII

Course Category	Project	Credits	12
Course Type	Internship/Project	L-T-P	0-0-24
Prerequisites	20AI&DS7551: Mini Project II	Continuous Eval Semester End Eval Total Marks	100 00 100

COURSE OUTCOMES

- 1. Formulate a real world problem and develop its requirements
- 2. Develop and design solution for a set of requirements
- 3. Test and validate the conformance of the developed prototype against the original requirements of the problem
- 4. Work as a responsible member and possibly a leader of a team in developing software solutions
- 5. Express technical and behavioral ideas and thought in oral settings
- 6. Participate in and possibly moderate, discussions that lead to making decisions
- 7. Express technical ideas, strategies and methodologies in written form
- 8. Prepare and conduct oral presentations
- 9. Self learn new tools, algorithms, and/or techniques that contribute to the software solution of the project
- 10. Generate alternative solutions, compare them and select the optimum one nt in the programming languages

Contribution of Course Outcomes towards achievement of Program Outcomes (1 – Low, 2 - Medium, 3 – High)
